LinkedIn: <https://www.linkedin.com/in/abhilasha-mulakala-461498131/>

SUMMARY OF EXPERIENCE:

- ❖ 8+ years of experience in developing web applications using Java, J2ee technologies in various domains like Telecom, Banking and Financial institutions
- ❖ Experienced in developing web-based applications using Spring Boot, Spring Rest and Spring Security
- ❖ Worked with Microservice architecture using Spring Boot to modularize code and implemented Rest API's using Spring Rest and implemented oauth mechanisms for security
- ❖ Utilized Java 8 features like Lambda expressions and Stream API for Bulk data operations on Collections which would increase the performance of the Application.
- ❖ Experience in developing and designing REST APIs using JSON and other messaging protocols.
- ❖ Experienced in implementation of JMS to exchange information over reliable channels in an asynchronous way by using Active MQ and Kafka as message queue.
- ❖ Developed web application using web MVC architecture for real time projects.
- ❖ Worked with SQL databases like Oracle, My SQL and Hands on Experience in working with NoSQL Database like Mongo DB.
- ❖ Implemented a Continuous Delivery pipeline with Docker, Jenkins and GitHub.
- ❖ Hands on experience in working with Junit, Mockito, Selenium, Test NG.
- ❖ Used version controller tools like Tortoise Subversion (SVN), CVS and Git.
- ❖ Experience in developing and deploying applications on Cloud Platforms like Amazon Web Services.
- ❖ Proficient in log management using log4J framework and Splunk.

TECHNICAL SKILLS:

Languages/API	Java 8/11, Java/J2EE, JDBC, REST API, Design Patterns, HTML, JavaScript, SQL and PL/SQL
Frameworks	Spring MVC, Spring Boot, Spring Cloud, Hibernate JPA
Database	Oracle, SQL Server, MySQL, DB2 and MongoDB
Web Services	SOAP, RESTFUL, WSDL
Version Control	Git, GitHub, SVN
Build Tool / plugin	Log4j and Maven, Jenkins
Testing Frameworks	Junit, Jtest, Mockito, Groovy
Cloud Technologies	PCF, AWS (EC2, S3, RDS/ DYNAMODB, EBS, SNS/SQS, LAMBDA),Netflix Eureka
Messaging Systems	RabbitMQ, Kafka
Web Technologies	HTML, CSS3, Servlets, Angular JS
Web/App Servers	Apache Tomcat, IBM WebSphere, BEA Web Logic, J-Boss
IDE's	IntelliJ 14.x/15.x, Spring Tool suite,Eclipse

PROJECT EXPERIENCE:

Concentrix(Client : Union Pacific Rail Road)

September 2023-Present

Senior Java Backend Developer

Roles & Responsibilities:

- ❖ Developed and integrated RESTful APIs to support mobile and web applications, facilitating seamless data exchange and modernization of the UI providing best customer experience and adding new capabilities
- ❖ Successfully migrated legacy systems which are using Wicket to java based microservices architecture using Spring Boot.
- ❖ Optimized complex SQL database queries and designed efficient database schemas to improve data retrieval speed.
- ❖ Integrated various UP APIs and services to extend functionality of existing applications.
- ❖ Automated testing and deployment processes using Jenkins, ensuring faster and more reliable deployments.
- ❖ Used comprehensive monitoring and logging solutions to track application performance and identify issues proactively.
- ❖ Provided Security and Authorization using SiteMinder.
- ❖ Implemented effective caching strategies to improve application performance and reduce latency.
- ❖ Used asynchronous communication for high-performance backend systems.
- ❖ Involved in writing test cases using JUnit, Mockito, and integration testing with Spring Test or MockMvc for code coverage
- ❖ Proficiency with version control systems like Git, which is crucial for collaboration and code management.

Environment: Java, Hibernate, JPA, Agile, Spring, MVC Design Patterns, Spring Boot, Spring Security, Spring Data, JSP, Servlet, RESTful, XML, AWS, Microservices, SQL, Oracle, Eclipse, GIT, JUnit, Maven, Log4j, JIRA, Jenkins, Windows.

Wipro(Client: United Health Group)

April 2022-May 2023

Senior Java Backend Developer

Roles & Responsibilities:

- ❖ Responsible for gathering and understanding the requirements and interacting with clients.
- ❖ Designed and developed Microservices business components using Spring Boot.
- ❖ Utilized Docker for the runtime environment for the CI/CD system to build, Test and Deploy.
- ❖ Implemented RESTful Web services in Service Oriented Architecture (SOA) to retrieve data from client side and made REST API calls from Angular and parsed the data to client.
- ❖ Mocked, validated and documented Web API (Swagger).
- ❖ Provided Security and Authorization using Spring Security.
- ❖ Consumed REST based Microservices with Rest template based on RESTful APIs.
- ❖ Deployed the applications in AWS as EC2 instances and created snapshots for the data that had to be stored in AWS S3.

- ❖ Built Docker Images and have run them on Docker container. Deployed Dockers contained Spring boot micro services into AWS EC2 container service using AWS Admin console and used lambda to run applications in AWS
- ❖ Experienced first-hand the best/worst practices for integrating Microservices into existing system architecture.
- ❖ Involved in writing XML configuration file for Hibernate-Database connectivity.
- ❖ Developed data transformer for converting legacy data from source tables to Avro format and fed into Kafka using Camel to process the file for multiple routes to different host locations.
- ❖ For application logging and notification, tracing mechanisms used Log4J.
- ❖ To keep track of issues and tasks on individuals used JIRA ticketing system.
- ❖ As a version control tool used GIT and IDE as Eclipse to build the code.

Environment: Java 1.8, JPA, Agile, Spring, MVC Design Patterns, Spring Boot, Spring Security, Spring Data, JSP, Hibernate, Cassandra, Servlet, RESTful, OAuth2, XML, AWS, Microservices, Apache Kafka, SQL, Oracle, MongoDB, Eclipse, WebSphere, GIT, JUnit, Maven, Log4j, JIRA, Jenkins, Docker, Kubernetes, Windows.

Aston Martin Cognizant F1 Team

Mar2021-Mar2022

Sr. Java Full Stack Developer

Roles & Responsibilities:

- ❖ Used Java Message Service (JMS) for reliable and asynchronous exchange of important information for status report.
- ❖ Creating automation and deployment templates for relational and NOSQL databases (standalone and RDS), including MSSQL, MYSQL, in AWS.
- ❖ Develop presentation tier using JSP, Java Script, HTML, and CSS for manipulating, validating, customizing, error messages to the User Interface.
- ❖ Utilize Camel to integrate micro services with other micro services and Rabbit MQ messaging exchanges.
- ❖ Used Rabbit MQ as Java Messaging Service for producing and consuming data between applications.
- ❖ Developed CI/CD system with Jenkins on Kubernetes environment.
- ❖ Implemented Authentication & Authorization with Site Minder and spring security.
- ❖ Portable deployment of applications as a single object using Docker.
- ❖ Produced as well as consumed RESTful web services using Jersey API's.
- ❖ Worked with GIT which is used as a version control tool in the project.
- ❖ Done with Unit testing using JUnit and Mockito.

Environment: Java, J2EE, Spring MVC, IOC, AOP, Restful Web Service, Multithreading, Hibernate, Eclipse, React JS, NodeJS, CSS3, HTML5, Web logic Server, WSDL, SOAP, JAX-WS, AXIS, Jersey, Jenkins, Kubernetes, Apache Kafka, Tomcat, Oracle 11g, Oracle SQL Developer, Linux, Docker, GIT, JIRA.

Capgemini

Dec 2017 - Mar2021

Sr. Java Back End Developer

Roles & Responsibilities:

- ❖ Followed Agile (SCRUM) methodologies and developed technical design documents.
- ❖ Provided dev support for IBM's API Connect and DataPower appliances in a multi-tiered environment.

- ❖ Used Maven to configure, build and deploy the Modules. Also, integrated these scripts with Jenkins.
- ❖ Involved in evolution of test automation framework based on Selenium, TestNG and Cucumber.
- ❖ Spring Boot Microservices were developed with micro services architecture using REST and Apache Kafka
- ❖ Implemented Web API in AngularJS controller to use in the application accessing data in database.
- ❖ Implemented Hibernate Template to use of HQL, Named Parameters, Named Queries, validations& interfaces like Expression, Query & Criteria. Implemented Hibernate/JPA for data persistence.
- ❖ Used Mongo DB(NoSQL) for database services. Created/managed Mongo DB/NoSQL collections.
- ❖ Executed Selenium test scripts on different browsers and checked for compatibility.
- ❖ Worked on GIT as Version Control System to track various code conflicts of the project.

Environment: Java 1.8, Spring Boot, hibernate 4.2, Spring batch/security/JTA/Boot, JPA, JavaScript, NodeJS, AngularJS, 2, HTML5, CSS, WAS, Microservices, RAD 8.0, Oracle 11g, Maven, log4j, Junit, XML, Web Services, Kafka, Splunk, GIT

Star Logistics Pvt Ltd

Feb 2016 - Mar2017

Core Java/J2EE Developer

Roles & Responsibilities:

- ❖ Involved in developing proof of concepts, designing the system components, coding and integration testing.
- ❖ Developed and maintained web services using RESTful API.
- ❖ Designed Java classes using Spring Framework to implement the Model View Control (MVC) architecture.
- ❖ Wrote complex SQL queries and programmed stored procedures, and control files for loading large amounts of data using Oracle 10g.
- ❖ Used Oracle SQL developer for the writing queries or procedures in SQL.
- ❖ Integrated Spring- Hibernate frameworks for ORM functionality in spring framework.
- ❖ Participated in all Agile scrum ceremonies, project planning, design discussions and release planning activities.
- ❖ Involved in development of User Interface using JSF, Rich Faces, Prime Faces, HTML/HTML5, CSS, JavaScript, jQuery, AJAX, and JSON.
- ❖ In production support responded to service tickets and service requests within established time-based requirements.
- ❖ Used SVN Repository for Version Control.

Environment: Java 1.7, J2EE (JSP, Servlets), JMS, JavaScript, jQuery, HTML, API, CSS, Bootstrap CSS, JSF 2.0 X, Hibernate, Spring, Linux, XML, XPATH, Shell scripts, Perl Scripts, Oracle 9i, Eclipse, JBOSS.
