

Chanki Gupta

Technical Architect | Solution Architect | Technical Lead | Principal Full Stack Engineer | Cloud Engineer | Backend Developer

Dallas, Texas, 75019 | chanki.gupta@gmail.com | [linkedin.com/in/chankigupta24](https://www.linkedin.com/in/chankigupta24)

SUMMARY

Lead Full Stack Cloud Engineer with 16 years of experience in spearheading the design, development, and implementation of cutting-edge software solutions. Demonstrated leadership in guiding cross-functional teams to deliver high-impact projects in Agile environments. Expertise spans across front-end and back-end technologies and cloud migration, with a strong focus on architecture design, scalability, and performance optimization.

SKILLS

AWS: S3, Lambda, Cloud Formation, IAM, SQS, SNS, KMS, R53, RDS CloudWatch, Systems manager, Secrets Manager, APIGEE, ECS, EKS, Stratum, SES, ECR, Lex, Bedrock

Programming Languages: Java, J2EE, SQL, Selenium, JMS, Kafka

DevOps Tools: Jenkins, Docker, Kubernetes, Argo-CD, Splunk, Datadog, Cartographer

Database: Oracle, DB2, Hibernate, Spring JDBC, Spring JPA, Snowflake

Frameworks: Spring Boot, Microservices, Spring 3.0, Spring over Struts, LWC(Dropwizard), TDD, BDD, DDD, Cucumber

Web Services: REST, Restful, SOAP, GraphQL, Open API

User Interface: AJAX, JavaScript, React, Angular, jQuery, CSS, HTML, Typescript

Scripts: Maven, Ant, Groovy

Server: Jboss, WebSphere, WebLogic, Tomcat

SCM: GIT, Github, Bitbucket, SVN, CVS

Tools: JIRA, SharePoint, Confluence, ServiceNow, Kanban Board, IntelliJ, Eclipse, Workfusion Studio, RAD

Methodology: Agile, Waterfall

Secondary Skills: Workfusion, ODI, Informatica, Bash, Shell script

EXPERIENCE

Technical Architect | Plano, USA | Nov 2024- Till Date

Capgemini America (USAA)

- Designed an application to track feeds from Multi Region Access points from source S3 buckets to downstream systems' S3 buckets using SQS.
- Did POC on migration of the repository from IBM RTC to Git to create enterprise grade solution.
- Used GitHub actions and SecDevops to create a utility for GitHub.
- Performed POC on deploying OIPA products using docker and Kubernetes to migrate them from WebLogic to Cloud thus decreasing deployment time by 50% and reducing server downtime.
- Used AWS Lambda and EventBridge to pass the member data from one application to another, reducing the average handle time of opening downstream applications by 20%.
- Performed migration of an application from Spring to Spring Boot 3.5.8 using Maven BOM and Hibernate 6.
- Used REST API's and Kafka Topics to pass member data and capture leads and opportunities in Salesforce and generate Quotes and Policies in PAS system.
- Modified UI of backstage application built on React js and integrated OAuth in backstage app.
- Did setup of Backstage app on local using WSL and Linux and on AWS cloud using EC2 instance, VPC and Security Groups to control traffic.
- Analyzed the ER Diagram, architecture diagram, flow diagrams, C3 and C4 models to provide solutions.
- Provided solutions to automate chat using Gen AI, Amazon Lex and Bedrock.
- Used Hugging Face with google-flan-t5-large and facebook-bart-large-cnn for NLP.

Technical Lead | Principal Software Engineer | Cloud Migration | Dallas, USA | Oct 2022- Oct 2024

Fidelity Investments

- Architected and led the implementation of Java application migration from on prem to cloud using AWS, resulting in a 20% reduction in server costs and a 35% increase in load handling capabilities.
- Design and discuss the architecture of the project making critical decisions to keep performance scalability and maintainability
- Enhanced Status Tracker tool built in Vue.js and Node.js.
- Developed Money Movement microservice application using Java, Spring boot and Oracle with TDD, BDD, DDD and migrated it to AWS cloud thus reducing server cost by 40% and 30% reduction in operational failures with 99.99% uptime.
- Developed money movement service using GraphQL queries, REST calls, Kafka messaging system and Snowflake.
- Worked on the migration of Control-M and Shell Scripts jobs to Cloud using AWS Lambda, Docker and Kubernetes.
- Implemented a CI/CD pipeline using Jenkins, uDeploy, JenkinsCore and AWS Cloud Formation, decreasing deployment times by 60% and accelerating product delivery cycles.
- Used Secrets Manager, CloudWatch, Datadog, Argo-CD for PODs monitoring and Splunk for logs monitoring, thus reducing failure reporting time by 20%.

- Authored comprehensive project documentation using Confluence, PowerPoint, and SharePoint, which streamlined team collaboration and reduced project completion time by 20%, facilitating a 15% increase in productivity.

Technical Lead | Oct 2018- Sep 2022 | Pune, India, Toronto, Canada and Phoenix, USA

Tata Consultancy Services (Client: Bank of Montreal and American Express)

- Understood the complex concepts of finances to implement financial standards IFRS9 and CECL issued by FASB.
- Designed and implemented RESTful APIs with Spring MVC and Angular js, enhancing system interoperability and facilitating a 40% increase in third-party integrations.
- Developed automation job using selenium and IFRS9 application using Spring boot, microservices, Java, Java EE, JPA, Multithreading and RESTful API.
- Single-handedly did development, enhancement, and production support for 80+ robotics, Workfusion and Java processes for Anti-Money Laundering.
- Participated in code reviews and refactoring, improving code quality and maintainability by 15%, and reducing bugs by 20%.
- Achieved 30% performance improvement in collecting AML data by implementing multi-threading with ExecutorService and CompletableFuture.
- Mentored and worked closely with the team members including business analysts, scrum masters and product managers to understand the project requirements and translated them into technical solutions.
- Executed detailed inspections and walk-throughs per CMM standards, enhancing project quality by 20% and reducing defect rates by 30%, while ensuring adherence to industry best practices.

Senior Full Stack Developer | Nov 2012- Sep 2018 |Noida, India and Deerfield, USA

Tata Consultancy Services (Client: Walgreens Co.)

- The projects in Walgreens process the data of retail prices and promotions to produce Mylars & Signs and placement of products on the shelves in stores.
- Architected and developed critical applications, Centralized Retail Signs and Mylars system which impacted every item of all the stores of Walgreens, with modern technologies, thus reducing the printing time of Signs by 70%.
- Development and review of complex programs, code, interfaces, mappings, packages, load plans, scenarios of ODI 11g/12c, procedures and SQL queries for Central Retail Signs.
- Developed Rule Set up and Product analysis web screens which provide data to optimizer to generate optimal sales data in Java/J2EE, Spring boot and microservices.
- Generated sales grid and graph using jqGrid and TreeGrid and Highcharts in Java and jQuery and react.js
- Pioneered the adoption of test-driven development (TDD) practices using Selenium, enhancing code quality and reducing the number of regression bugs by 35%.
- Improved performance of queries by 40% using AWR report, query analysis, cost execution plan analysis and taking performance improvement measures.
- Did performance testing, QA support, UAT, production deployment and support.
- Conducted comprehensive code reviews and pair programming sessions that improved team coding standards and reduced post-deployment bug rates by 20%.

Full Stack Developer | Nov 2009 - Oct 2012 | Noida, India

Tata Consultancy Services (Client: Apple Inc.)

- Refactored code, eliminated bugs and enhanced Maestro/iDesk portal which is used by customer care executives of Apple Inc. to provide customer service, leading to a 15% improvement in the application's performance.
- Designed a user-friendly and configurable web application to allow users to download Mac OS new releases for free. Order and visibility of pages and fields could be changed without modifying application. The application was **hosted on apple.com**
- Constructed a job to upload files from Application Server to a third-party server in just a day.
- Developed a configurable monitoring job which monitors the failure scenarios of the file upload process and raises an alarm (ticket).
- Utilized Java Messaging Service to design and develop a User Tracking Queue to track the details of the users logged into the portal.
- Implemented RESTful web services to create a service layer and used Ajax, jQuery, HTML, CSS, and JSP for the UI layer development
- Written maven scripts to archive the files and perform deployment on Linux/OSX server boxes through Linux.
- Handled server-side configurations like node creation, cluster creation (JBoss clustering), cache setup (tree cache and coherence cache), JMS setup, cron-job setup.
- Conducted performance analysis using JBoss Profiler and tuned applications for optimal performance.
- Set up of IT and UAT environment for testing purposes. Prepared test plans and data, and user documentation.
- Code deployment on pre-production and production servers on JBoss through Linux.
- Created JNDI mapping of datasource and database pooling.

- Performed information security review of the application to provide high level security of the application including protection against SQL injection vulnerabilities.
- Rendered web pages in different locales by implementing internationalization.
- Implemented security measures to prevent hacking and fraud attacks.

EDUCATION

Bachelor of Technology in Computer Science (4 Years-Full Time Course)
(CGPA 9.2)

Aligarh Muslim University (2005-2009)

PUBLICATIONS

Digital Image Encryption based on Chaotic Map Lattice”, published and presented at the **IEEE International Conference**.
