

Gokul Krishnan | Email Id: gokul.krishnan@hotmail.com
Mobile No: +1- 7634851564

Location: New Jersey, USA

Professional Summary:

- **Having 11.8+ years of** experience in development of applications using **J2SE/J2EE** Technologies.
- Strong Knowledge on Java 17, Spring boot 3.2, Kafka, Micro Services and Hibernate Technologies.
- Extensive work experience on Implementing the Rest API's and Microservices using Spring Boot and integrated with **Cloud** components
- Experience on Servlets, JSP, JS (JavaScript), Typescript, Angular, JSON, AJAX and Ext-JS (Extended JavaScript).
- Hands-on experience with Jenkins CI CD pipeline for configuring environments and for build and deployment.
- Experience on Jboss, Tomcat, GlashFish v3 prelude and Apache 2.2 Server.

Organization Name: Capgemini America Inc., New Jersey USA, Since May-2024 – till now.

Project: May-2024 – Present (Fidelity Investments).

Role: Lead Consultant

Domain: Financial Services

Team Size: 9

Onsite Duration: May-2024 – till now

Technical Skills:

Java 17, Spring Boot 3.0, Rest-API, Micro-services, Hibernate, Kafka, AWS EKS, Jenkins, Docker, **Data dog**, and Oracle

Project Description:

Fidelity offers investors the opportunity to participate in both the new issue and secondary bond markets. Investors pay no commissions or concessions when participating in new issue offerings, but Fidelity charges a mark-up (for buys) or mark-down (for sells) in the secondary market. New issues have a significant presence in the bond market as issuers are constantly entering the market to “roll” their existing debt as well as create new debt. Accessibility of new issues varies for individual investors, with the Treasury market most accessible and the corporate market least accessible. Fidelity makes it easy for you to view and select from our large inventory of new issue and secondary market bonds and CDs to meet your needs.

Organization Name: Wipro Limited., New Jersey USA since Nov-2020 to May- 2024.

Project: Nov-2020 – May-2024 (United Health Care).

Role: Technical Lead

Domain: Health Care Services

Team Size: 20

Onsite Duration: Aug-2023 – May-2024

Technical Skills:

Java 17, Spring Boot 3.0, Spring Batch, Rest-API, Micro-services, Hibernate, Kafka, AWS Lambda, Docker, Kubernetes, and My-SQL

Project Description:

Value-based care reimburses health care providers based on the quality of service that they provide rather than providing payment for each test or procedure, unlike fee-for-service. VBRS incentivize quality of patient care over quantity. Outcome based reimbursement is the goal benefiting both the patient and the provider. In value-based care, providers are reimbursed for helping patients to recover their health. Lower the impacts and occurrence of long-lasting diseases and live better lives in an evidence-based way. Value-based care is different from fee-for-service and capitation, in which doctors are rewarded for the number of healthcare services they provide. The term 'value' in value-based healthcare has originated from shaping health results against the price of providing the outcomes.

Roles and Responsibilities:

- Understanding the business requirements and functional specifications of the client module
- Design and development standpoint for the development team.
- Prepare the templates for the functional specification review, technical specification, unit case.
- Integration of APIs, Micro-services, and data models composed from MongoDB databases.
and **REST services** with existing and new Angular based applications.
- Designing and corresponding actuate report templates.
- **Implementing** Single Sign-On **user authentication system and developing a** user role-based access system **using Angular, MongoDB and Loopback**
- **Working with the core AWS services including AWS Lambda, S3 storage integration with Java API.**
- Working with Kubernetes deployment for all micro-services
- Development of migrating actuate reports.
- Identify the process gaps and provide alternatives to the project team.
- Integrated Grafana Dashboard for monitoring Kafka streaming services.
- Technical assistance from design and development
- Generating proxies and buddy testing and peer code review
- Prepare the templates for the functional specification review, technical specifications, unit test case, etc...

Organization Name: Inter Globe Technologies., United Arab Emirates since Dec-2017 to Jun-2020.

Project: Dec-2017 - Jun-2020 (Emirates Airlines)

Role: Sr. Software Engineer

Domain: Airline Services

Team Size: 15

Onsite Duration: 30 month(s)

Technical Skills:

Java 8, Angular8, Typescript Material Design, Maven tool, Rest-API, Hibernate

Spring 3.2, Jenkins, spring boot, Couch base, Oracle DB

Project Description:

As part of ACP system to get the collective information, the ACP system does communicate with WASOLA and DSI system via TIBCO. During this interaction ACP can get the controller and flight information for the user. ACP does provide the ability to generate/display/dispatch different customer/flight/shift level related reports and export to excel, PDF and print to view the information. As a controller ability to view/update the flight status.

Roles and Responsibilities:

- Involved in developing enterprise application using Java, Spring, Angular, XML, Hibernate, Testing and evaluating new programs.
- Developing **REST API** based architecture and integrate with **AngularJS, Angular and My-SQL**
- Software design, code analysis, requirements analysis, identification of code metrics, system risk analysis, software reliability analysis
- Design and Integrated Micro-services and Event driven Architecture.
- Support maintains and document software functionality.
- Evaluate and identify new technologies for implementation.
- Implementing data binding and MVC using Angular for all UI/UX, front-end components.
- Deployed application in AWS cloud environment
- Developing data insertion forms and validated them using JavaScript.
- Maintained standards compliance.
- Implementing well designed, testable, efficient code

Organization Name: Newt Global India Pvt Ltd., Chennai, since Oct-2016 to Dec-2017.

Project: Oct-2016 - Dec-2017 (American Airlines)

Role: Sr. Software Engineer

Domain: Airline Services

Team Size: 7

Onsite Duration: NA

Technical Skills:

Java, XML, Angular-JS 1.4, Maven tool, Spring 3.2, Jenkins, Spring Boot, Cron job,

Mongo DB

Project Description:

Hygieia is a single, configurable, easy to use dashboard to visualize near real-time status of the entire delivery pipeline. There are some excellent commercial ALM tools that allow one to visualize traceability between stories, code, tests and builds, however, they do not cross over from build to deployment. There are some good commercial Operations tools that provide visibility into server and

application run time health, metrics, analytics etc. however they do not provide visibility into the development and build activities. Open-source tools/frameworks such as Grafana provide generic framework to build a dashboard, however, collecting data from the numerous DevOps tools is still the challenge.

Roles and Responsibilities:

- Involved Iteration planning, review & retrospective.
- Technical consulting with potential clients, identifying and putting forward solution scenarios.
- Application of product development best practices.
- Analyse requirements and generate detailed technical specifications and planning for the project.
- Designing, coding, and debugging existing code and Integration of the modules in the existing code.
- Implemented the Scheduling jobs on the application.
- Implement exception handling, develop code for data access and designing of user interface.
- Prepare design documents, design patterns, prepare component design specification / feature design specification and time estimation.

Organization Name: Larsen & Toubro InfoTech., Chennai, since Oct-2014 to Oct 2016.

Project: Oct-2014 - Oct-2016 (Citi Bank)

Role: Sr. Software Engineer

Domain: Retail Banking

Team Size: 6

Onsite Duration: NA

Technical Skills:

Java, XML, Ext-JS 4.1, Apache poi, Maven tool, Spring 3.2, Spring Batch process

Hibernate, Oracle10g, Jenkins, Jira

Project Description:

As part of CCAR process, BHCs are required to submit extensive data to FED on their loan, securities, trading portfolios, business activities, revenues, and expenses.

- 14A Schedules are submitted semi-annually.
- 14Q Schedules are submitted quarterly.
- 14M Schedules are submitted monthly.
- An IT platform is developed to support CCAR 14A Retail Reporting process.
- A semi-automated system for data collection, data validation, data attestation and data review for supporting submission of CCAR 14A Retail schedules.

The IT platform is in use since year-end 2012. This platform is being enhanced in 2014 with the inclusion of more review reports, implementation of common entitlements, automatic reconciliation between CCAR 14Q & CCAR14A and increasing support for FED schedule generation.

Roles and Responsibilities:

- Involved sprint planning, review & retrospective.

- Responsible for end-to-end cross functional system design and communication
- Organised Application of product development best practices.
- Involved in Project Environmental Setup, Integration and Deployment.
- Writes and verifies code which adheres to the acceptance criteria.
- Implemented the Scheduling jobs on the application.

Organization Name: Arrow Electronics India Pvt Ltd., Bangalore, since Mar-2013 to Sep-2014.

Project: Mar-2013 - Sep-2014 (Arrow Electronics)

Role: Programmer-Web Application

Domain: Supply Chain

Team Size: 18

Onsite Duration: NA

Technical Skills:

Java, Multi-threading, XML, JSP, Rest API Servlets, Mainframe, HTML, Java script,
Oracle 9i and PL/SQL

Project Description:

The NC/NR Contract Management application was developed as a tool to aid in productivity of NC/NR contracting and tracking of contract quantities to uphold a customer's liability to high-risk parts for NAC groups.

The NC/NR Contract Management application functions include:

- Creation and maintenance for NC/NR Purchase Order (PO), Blanket, End-Of-Life (EOL), and Customer Specific agreements to include review, edit, delete, clone, save, view, and email a copy to your customer.
- Integration with and accessibility from within Sales Desktop.
- Integration with HOLD, CTSUM and SLMNQ – mainframe screen integration to reflect whether an accepted contract exists for DS, EL, NS, and NR item statuses.

Alerts will be generated when inconsistencies exist between NC/NR sales orders and online contracts.

Roles and Responsibilities:

- Involved in Analysis and Understanding of Business requirements document.
- Actively involved in development and worked on controller layer using servlet and UI part using JSP.
- Completed enhancement works within time by conducting timely reviews.
- Involved in Integration and Deployment.
- Involved in Unit Testing and set up Oracle Database Server.
- Worked on a Pressure situation for completing the tasks and solving bugs.

CERTIFICATION

Java Standard Edition 6 Programmer Certified Professional – (OCJP).
