

Keerthi Goud Gokari
DevOps/Cloud Engineer

 gokarikerthigoud.567@gmail.com

 +1 (940) 843-9597

PROFILE OVERVIEW

- DevOps/ Cloud Engineer with **6 years of experience** in automating, securing, and streamlining deployment pipelines across **cloud and on-premises** environments, supporting **development, security, and operations**.
- Senior-level experience in Kubernetes engineering, container orchestration, and Azure cloud automation with strong focus on **operator patterns, GitOps, and SDK/tooling** development.
- Worked extensively on **Azure (API Management, Data Factories, App Services, SQL Databases, Virtual Machines, Storage, Compute, Integration, IAM, Networking)** and **Terraform for Infrastructure as Code (IaC)**, delivering **secure and scalable cloud-native solutions.**)
- Built **CI/CD pipelines** using **Jenkins, Azure DevOps, GitHub Actions, GitLab CI and spinnaker**, automating deployments for **containerized and microservices-based applications** in **Kubernetes (EKS, AKS)**.
- Skilled in python and developed **Python-based SDKs** to abstract cloud operations (AWS/Azure) and internal API workflows, accelerating infrastructure provisioning and cloud automation.
- Worked with **Terraform, Ansible, Chef, and Puppet** to automate infrastructure provisioning, enforce security policies, and manage configurations across multiple environments.
- Implemented **GitOps practices** using **ArgoCD and FluxCD** for **secure, declarative, and automated infrastructure management**.
- Integrated **SAST, DAST, and IAST** tools like **SonarQube, Checkmarx, Fortify, and OWASP ZAP** into CI/CD pipelines to **automate security scanning** and improve code quality.
- Experienced in **Azure AI services integration**, including Cognitive Services, Azure Machine Learning, and Bot Services, to enable AI-driven automation and insights.
- Skilled in **designing and deploying AI/ML workflows** on Azure, leveraging Data Factory, Databricks, and AKS for scalable and secure model lifecycle management.
- Focused on **container security and compliance**, implementing **Docker Bench for Security, Trivy, Falco, Kube-bench, and Aqua Security** to detect vulnerabilities and enforce security best practices.
- Strong understanding of **Zero Trust Architecture (ZTA)** and implemented **fine-grained RBAC policies, API security best practices, and Web Application Firewalls (WAFs)**.
- Built **observability solutions** with **Prometheus, Grafana, and AWS CloudWatch**, setting up real-time monitoring dashboards and proactive alerting.
- Automated **compliance enforcement** using **Terraform Sentinel, Azure Policy**, ensuring alignment with **CIS Benchmarks, NIST, and ISO 27001**.
- Worked in **Agile/Scrum teams**, collaborating with developers, security teams, and cloud architects to deliver secure and scalable cloud solutions.

TECHNICAL SKILLS

- **Version Control & CI/CD:** Git, GitHub, GitLab CI, Jenkins (2.x), Azure DevOps, Bamboo, ANT, Maven, Travis CI
- **Infrastructure as Code (IaC):** Terraform (1.x), CloudFormation, Packer (1.9.x)
- **Configuration Management:** Ansible (2.14.x), Chef (16.x), Puppet (7.x), SaltStack
- **Cloud Platforms:** AWS (EKS, EC2, S3, VPC, Route 53, IAM, CloudFormation), Azure (AKS, App Services, API Management, Key Vault)
- **Security & Compliance:** Azure Sentinel, IAM Policies, SCPs, Zero Trust, WAF, OPA/Gatekeeper (v3.x), Trivy (v0.48.0), Falco (0.37.x), Aqua Security
- **Programming & Scripting:** Java 11 & 17, (Spring Boot, REST API, OAuth 2.0, OpenID Connect), Python (3.9, 3.10), Shell, Groovy (4.x), PowerShell (7.x), Ruby, Perl, Batch, WLST
- **Containerization & Orchestration:** Docker (24.x), Kubernetes (EKS, AKS), Helm (3.x), Istio, Linkerd, ArgoCD (2.x)
- **Monitoring & Logging:** ELK (Elasticsearch, Logstash, Kibana), Splunk, Prometheus, Grafana, Loki
- **DevSecOps & Security Automation:** SonarQube, Checkmarx, Fortify, OWASP ZAP, SAST, DAST, IAST, Terraform Sentinel
- **Database & Storage:** PostgreSQL, MySQL, MongoDB, Cassandra, Oracle, AWS RDS, Azure SQL, S3, Blob Storage

- **Networking & API Security:** API Gateway, Web Application Firewall (WAF), Kong, Envoy Proxy, Service Mesh (Istio, Consul)
- **Operating Systems:** Linux (Ubuntu 22.04, CentOS 7, 8, RHEL 9), Windows 10, 11, Server 2022, Mac OS Ventura

WORK EXPERIENCE

DevOps Engineer | SeaWorld, Remote

July 2025 – Present

Responsibilities:

- Architected and automated large-scale cloud infrastructure (**Azure/AWS**) using Terraform and GitHub Actions, enabling standardized, repeatable provisioning across production and industrial digital platforms.
- Designed and optimized **Kubernetes** workloads (AKS/EKS) supporting real-time energy analytics, **IoT data pipelines**, and internal platform services.
- Built enterprise-grade CI/CD pipelines using **GitHub Actions, Jenkins**, and Harness to support microservices, APIs, AI workloads, and industrial applications.
- Implemented GitOps workflows (ArgoCD/FluxCD) to deliver fully declarative, auditable deployments across multiple clusters and environments.
- Developed automation tooling in **Python and Bash** to streamline operational tasks, configuration management, drift detection, and self-healing workflows.
- Integrated observability stacks including **Prometheus, Grafana, ELK**, Dynatrace, and Azure Monitor for end-to-end visibility, SLO tracking, and proactive incident prevention.
- Strengthened security posture by embedding **DevSecOps** practices into pipelines, including **SAST/DAST scans**, dependency scanning, IaC scanning, and secrets governance.
- Supported industrial digital transformation initiatives by enabling highly available, scalable cloud platforms for energy monitoring, predictive maintenance, and **AI-driven analytics**.
- Collaborated with cross-functional engineering, data, and reliability teams to optimize system performance, **reduce MTTR**, and drive platform reliability improvements.
- Drove cost optimization initiatives across cloud workloads by rightsizing infrastructure, automating scaling policies, and implementing resource governance frameworks.
- Participated in release planning, architecture reviews, and operational readiness processes for new platform features and enterprise cloud services.

DevOps Engineer – Yash Technologies, Hyderabad, India

Aug 2022 – July 2023

Responsibilities:

- Designed and implemented secure CI/CD pipelines using **Jenkins, Azure DevOps, and Spinnaker**, integrating security scanning tools like SonarQube, and Fortify to automate SAST, DAST, and IAST testing, ensuring code quality and compliance throughout the SDLC.
- Automated provisioning of **Azure cloud infrastructure** using Terraform modules, ARM templates, and the Azure SDK with Python, enabling reproducible, scalable, and cost-optimized deployments across compute, storage, and networking resources.
- Designed and automated Azure cloud infrastructure solutions, including AKS, Azure Functions, VNets, and Storage Accounts, ensuring scalable, secure, and production-ready deployments.
- Implemented platform automation using Terraform, **Azure DevOps**, and GitHub Actions to standardize environment provisioning and eliminate configuration drift.
- Integrated **AI-powered** automation features within AKS workloads, enabling agent-based workflow orchestration and enhancing operational efficiency using Azure OpenAI and custom inference services.
- Led modernization of CI/CD pipelines with security gates, automated scanning, secrets governance, and policy-as-code to align with **DevSecOps** best practices.
- Designed and maintained AKS Helm charts and GitOps pipelines with **Azure GitOps/FluxCD** for fully declarative deployments.
- Built enterprise-level observability with Azure Monitor, Log Analytics, Dynatrace, and Grafana to enable metric-driven SLO tracking, performance tuning, and proactive alerting.
- Collaborated with architecture teams to define cloud platform standards, enforce Azure governance, tagging policies, RBAC, and zero-trust controls.
- Led production readiness reviews, DR planning, incident response, and root-cause analysis for critical cloud workloads, reducing MTTR and improving system reliability.
- Mentored DevOps engineers on Terraform, AKS administration, GitHub Actions pipelines, and secure deployment practices.
- Implemented **Azure governance and security best practices** by creating and testing Azure Policies, enforcing RBAC, and managing IAM roles, groups, and service principals to achieve least-privilege access across multi-tenant environments.

Responsibilities:

- Created and secured **custom Docker container images** using Docker Bench, Trivy, and Aqua Security, implementing vulnerability scans and compliance enforcement across containerized environments.
- Automated Azure infrastructure provisioning using Terraform modules for AKS clusters, VNets, Private Endpoints, and **Azure SQL**.
- Built CI/CD pipelines using Azure DevOps and **GitHub Actions** for microservices, ensuring automated build, test, artifact management, and secure deployments.
- Implemented containerized application deployments on AKS with **Docker, Helm**, and YAML manifests.
- Integrated basic **AI/ML** workflows into CI/CD pipelines—triggering model deployments and automated validation for internal AI-enabled features.
- Enabled logging, monitoring, and distributed tracing using **Azure Monitor**, Application Insights, and Log Analytics for complete observability.
- Improved deployment reliability by implementing **blue-green** and rolling strategies for AKS services.
- Strengthened platform security with **IAM**, managed identities, secret rotation, and vulnerability scanning tools (**SonarQube, Snyk**).
- Supported developers with environment setup, release automation, and troubleshooting application infrastructure issues.
- Designed and configured **Azure Virtual Networks (VNets)**, including subnets, DNS, DHCP, and routing rules, applying network security groups (NSGs) to enforce least-privilege access and strong segmentation of workloads.
- Managed **Azure Compute resources** including VM Scale Sets, Application Gateway, Load Balancing, and Web/Worker roles to deliver scalable and fault-tolerant applications across hybrid environments.
- Implemented **Zero Trust Architecture** by enforcing fine-grained RBAC policies, managing identities via Azure AD and Key Vault, and securing secrets and credentials used by applications and services.
- Automated provisioning with **Terraform, Ansible, and Chef**, building reusable IaC modules and playbooks to ensure consistent, secure, and reproducible deployments across development, test, and production.

Responsibilities:

- Designed and implemented **migration strategies** for traditional on-premise systems to Azure using Lift-and-Shift, Azure Migrate, and third-party migration tools, establishing a foundation for large-scale cloud adoption.
- Migrated **on-premises databases** including Oracle, SQL Server, DB2, and MongoDB into **Azure Data Lake Store (ADLS)** pipelines using Azure Data Factory (ADF V1/V2), ensuring secure and optimized data integration.
- Introduced **Azure Policy definitions** for governance and compliance, enforcing basic security and configuration standards across Azure IaaS and AKS environments.
- Built initial automation scripts in **Python using the Azure SDK**, streamlining provisioning, storage operations, and configuration tasks to reduce manual interventions.
- Contributed to early adoption of **Spinnaker with Jenkins pipelines** for multi-stage deployments on AKS, enabling controlled rollouts and canary testing for containerized applications.
- Developed **GitOps workflows** using ArgoCD and FluxCD for declarative Kubernetes infrastructure management, laying the foundation for secure, automated container deployments.
- Secured **Azure Kubernetes Service (AKS) clusters** by applying network policies, Kubernetes RBAC, Pod Security Standards, and OPA/Gatekeeper policies to enforce compliance.
- Automated **container security scanning** with Trivy and Falco, ensuring runtime protection and vulnerability remediation in Kubernetes workloads.
- Scheduled, deployed, and managed **AKS container replicas**, optimizing resource allocation and workload performance across clusters.
- Designed and maintained **Helm charts** for Kubernetes applications, standardizing deployments and streamlining Helm package release cycles.
- Developed and managed **Docker images** for middleware, domain configurations, and application workloads, ensuring hardened and reusable builds.
- Automated **Azure IaaS provisioning** using Terraform modules for VM Scale Sets and networking, accelerating infrastructure delivery.

- Implemented **monitoring and observability solutions** using Azure Monitor, Prometheus, and Grafana, creating alerts and dashboards for real-time performance and security insights.
- Automated infrastructure configuration using **Ansible Tower**, creating inventories, roles, and scheduled jobs to enforce compliance across hybrid environments.
- Collaborated with architects on **system design and stability** for Azure migration projects, aligning deployments with business continuity objectives and security requirements.
- Explored **Azure AI services (Cognitive Services, Azure ML)** through proof-of-concept projects, integrating text analytics and model deployment into early cloud workloads.

Cloud Engineer – Novitas Technologies Pvt Ltd, Hyderabad, India

May 2017- Oct 2019

Responsibilities:

- Gained foundational experience with **Azure services (VMs, Storage, IAM, Networking, Integration)** while supporting cross-cloud migration projects, assisting in the deployment and configuration of hybrid cloud workloads.
- Designed and implemented **migration strategies** for traditional on-premise systems, utilizing Azure Migrate and Lift-and-Shift approaches to move infrastructure and applications into Azure environments.
- Migrated **on-premises databases** (Oracle, SQL Server, DB2, MongoDB) into **Azure Data Lake Store (ADLS)** pipelines using Azure Data Factory (ADF V1/V2), enabling secure and optimized data integration.
- Developed **Python-based automation scripts using the Azure SDK** to provision resources, validate configurations, and reduce manual intervention during deployments.
- Explored **Azure Cognitive Services and Azure Machine Learning** through proof-of-concept projects, integrating text analytics and model training capabilities into pilot business solutions.
- Assisted in defining **Azure Policy templates and RBAC roles** to enforce governance, access controls, and compliance requirements in early Azure environments.
- Built and managed **CI/CD pipelines using Jenkins** for Dockerized applications, contributing to early automation efforts that laid the foundation for future Azure DevOps and Spinnaker-based pipelines.
- Designed, secured, and deployed **containerized applications on AKS** by creating Docker images, configuring Kubernetes manifests, and implementing security best practices such as RBAC, Pod Security Standards, and OPA/Gatekeeper.
- Automated **infrastructure provisioning** for Azure IaaS environments using Terraform modules, enabling reproducible deployments of virtual machine scale sets and networking components.
- Integrated **monitoring and observability solutions** with Azure Monitor, Prometheus, and Grafana, configuring alerts and dashboards to track performance, availability, and security events.
- Supported **system design, application deployment, and operational stability** activities for hybrid workloads, ensuring secure, scalable, and reliable business continuity during the organization's early Azure adoption.

EDUCATION

Master's in Computer Science – University of North Texas (Aug 2023 - May 2025)
