

Name: Kumar Teja Yarra

Email Id: ykumarteja.9@gmail.com

Contact: +1 (702) -861-4601

Full Stack Java Developer

Professional Summary:

- **Having 8 years** of experience working as a Java /J2EE developer in designing, developing, deploying, and maintaining web-based, client/server applications along with Enterprise and Distributed applications.
- Expertise in **Java** programming and have a good understanding on **OOPs, Collections, Exceptions Handling, Input/output (I/O) System, Annotations, Concurrency, Multi-Threading, Lambda and Generics.**
- Extensive experience in Front-End UI technologies like **HTML, CSS, Bootstrap JS, Angular 9 JS, Angular, ReactJS** in developing dynamic and responsive web pages.
- Extensive knowledge in developing applications in a **single page (SPAs)** using various JavaScript frameworks like **Angular 8/9, React and AngularJS.**
- Experience on Object Oriented Design Patterns such as **Singleton Pattern, MVC Pattern, Factory Pattern, Façade Pattern and DAO Pattern** with exposure to UML Modeling.
- I have good experience working with **Java1.8 and JDK1.8** and implemented new features like **Lambda Expressions, Streams, Java Time API.**
- Experience in Micro services development using spring boot and deployment in Pivotal Cloud Foundry (**PCF**).
- Good experience in various modules of Spring framework like **Spring IOC, Spring MVC, Spring Batch, Spring ORM, Transaction Management, Spring Security and Spring Boot, Spring Data.**
- Expertise in implementing persistence logic using **JDBC, JPA, Spring JDBC, Hibernate** framework.
- Extensively worked on **Micro Services** using **Spring Boot, Spring Data and REST**
- Developed powerful Single Page Application and dynamic responsive Web Application with **Angular 8/9.**
- Expertise in implementing Service Oriented Architecture by using **RESTful** web services.
- Experience in scripting and automation for various tasks using **Python.**
- Worked with **Jersey API** to implement **RESTful** web services, strong knowledge on **JAX-RS** annotations.
- Hands on experience in **Amazon Web Services (AWS)**, services like **EC2, S3, IAM, ELB (Load Balancers), RDS, VPC, Route53, Cloud Watch, Cloud Formation, IAM, SNS** etc.
- Experience with **AWS Cloud formation** and launch configurations to automate repeatable provisioning of **AWS resources** for applications.
- Installed Configured and maintained **WebSphere Application Server 6.x/7.0/8.0/8.5, Apache, IBM HTTP server 6.x/7.0/8.0/8.5** on AIX in DEV, QA and PROD environments.
- Hosted the application on a **Node.js** server using express middleware.
- Built restful web services using **Node.JS** and implemented the front-end using jQuery and AngularJS controllers, directives, and services.
- Develop enterprise application using **Scala.**
- Created **Angular 9** components, implemented interpolation, input variables, Bootstrapping, Ng For, Ng If, Router Outlet, binding the events, decorators.
- Utilized the features of **Angular 8** to present effective web design. Built Angular 8 components, UI services to consume REST services using Component based architecture provided by Angular 8.
- Good Experience in Server-side Framework like **Node.js** and Java script libraries like **React.js**

- Created and configured Microservices architecture and integrated with React JS application.
- Worked on **Web application** and make sure that is more responsive on **Mobile** and **Tablets**.
- Deep hands-on experience on building scalable web service architectures with various relational **MySQL, Oracle DB**.
- Having knowledge of **NoSQL** databases like **Cassandra** and **MongoDB**.
- Experience with messaging systems like **Kafka, Kafka event sourcing, ActiveMQ** and **RabbitMQ**.
- Experience in creating and handling real time data streaming solutions and handling messaging services using **Apache Kafka**.
- **Framework API** with customized swing components are used to maintain the uniform look and feel. Designing the screens in compliance with the other existing applications and developing the swing components accordingly.
- Developed micro apps with latest **Angular 8**. Micro apps are easy maintainable and highly reusable.
- Used **Splunk** for the engineering dashboards used by the developers for easy track of application health.
- Set up and maintained Logging and Monitoring subsystems using **Prometheus** and **Grafana**.
- Good Experience working with the SDLC methodologies like **Agile Scrum, TDD and Waterfall**.
- Experience in using IDE tools like **Eclipse, NetBeans, IntelliJ IDEA**
- Experience in using Ant, Maven build tools.
- Experience in integration of **AWS services** with other application infrastructure.
- Used **JUnit Framework** to perform Unit testing of the application.
- Performed unit and integration test by writing **JUnit test** cases using Junit Frameworks like **Mockito**.
- Good experience working with **Continuous Integration and Deployment (CI/CD)** tools like **Jenkins, Docker**.
- Experience with container-based deployments using **Docker**, working with **Docker images** and **Docker Hub**.
- Used **Kubernetes** to orchestrate the deployment, scaling, and management of **Docker** containers.
- Experience in using version control and configuration management tools like **GIT** and **CVS**.
- Set up **Jenkins's** server and build jobs to provide continuous automated builds based on polling the **Git** source control system.

Technical Skills:

Language	Java, Scala, Python, JavaScript, C, HTML, Type Script
Java Technology	JSP, Servlet, JPA, JUnit
Methodologies	Agile, Scrum, SDLC
AWS Components	EC2, AMI, IAM, ELB, auto scaling, launch configuration, SNS, SES, S3, RDS, VPC, Route53, Cloud Watch, Cloud Formation
Web Technologies	HTML5, CSS3, Java Script, Servlets, JSPs, EJB, JMS, XML, jQuery, Bootstrap, AJAX, JSON, Angular 8/9, NodeJS
Web Services	RESTful, SOAP, JAX- B
Frameworks	Spring (MVC, Core, Data), Hibernate, Spring Boot, Angular, AngularJS, React.js, Redux.
Message Queues	Apache Kafka, RabbitMQ, ActiveMQ
Application Server	IBM WebSphere Application server 8.x/7.x/6.x, IBM HTTP Server 8.x/7.x/6.x, IBM WebSphere MQ Server 7.0/6.0, Tomcat
Data Bases	Oracle, SQL server, MySQL, Cassandra, MongoDB
Query Language	SQL, PL/SQL
Version Control	Git, GitHub, CVS
Operating System	Windows, Linux
Container Technologies	Docker, Kubernetes

Build Tools	Jenkins, Maven
Testing	JUnit, Mockito
IDE	Eclipse, IntelliJ, NetBeans

Professional Experience:

Full Stack Java Developer

Apple, Cupertino, CA

Apr 2022 – Till Date

Responsibilities:

- Involved in **API testing**, ensuring the reliability, functionality, and performance of **RESTful APIs**.
- Created API mocks in **Postman** to simulate endpoints and test API integrations in the absence of actual services.
- Managed **AWS** resources, including **EC2** instances, **Athena**, and **S3** storage, to support the **Rio Pipelines** and testing environment.
- Integrated **Kafka** with various **AWS** services, such as **AWS Lambda** and **S3**, to create robust and scalable data pipelines.
- Installation, Configuration, and maintenance of application running on **WAS 8.5/8.0**, **IBM HTTP Server**, **WebSphere MQ 7.5** and **WebSphere Message Broker IIBv10**.
- Implemented Clustering, Performance tuning and troubleshooting of **IBM WebSphere MQ Server 7.0/6.0**.
- Updated **WebSphere Application Server**, **IBM HTTP server** and Plug-in with latest fix packs
- Designed and developed real-time data streaming applications using **Kafka**.
- Implemented **Avro**-based serialization and deserialization methods in **Kafka** applications to ensure efficient data encoding and decoding.
- Implemented Angular Controllers to maintain each view data. Implemented Angular Service calls using Angular Factory tested all application controllers extensively with Angular built-in testing facilities.
- Created Reusable Modules and Custom Directives in **Angular 9** which got used in various places of application.
- Write and maintain Java-based test scripts using **TestNG** annotations for test setup, execution, and teardown.
- Developed automation scripts and templates (e.g., SH scripts and Rio templates) to provision and configure **AWS** resources as needed.
- Designed data mapping and transformation logic to ensure seamless data flow between **AWS** and **Cassandra** for data integrity checks.
- Experience in writing scripts and automation tasks using **Python** for tasks like data processing, system administration and deployment automation.
- Deep understanding and practical experience with popular **Python** libraries for data science, such as NumPy, Pandas, Matplotlib, and scikit-learn, for data manipulation, analysis, visualization, and machine learning.
- Hands-on experience with web scraping using **Python** packages such as BeautifulSoup and Scrapy.
- Knowledgeable in utilizing **Python** for employing libraries like TensorFlow, Keras, and Scikit-learn.
- Leveraged **Java 8** streams to filter and transform data collections, improving code maintainability and reducing boilerplate code.
- Leveraged **AWS Spark Streaming** to ingest and process data streams from **Kafka** topics in real-time.
- Implemented data checks and monitoring using **Spark** to ensure that data received from **Kafka**.
- Implemented **design patterns** in **Scala** for the application and implemented scalable microservices architectures using **Scala** and **Akka**, effectively handling high-throughput and low-latency requirements in distributed systems.

- Collaborated with cross-functional teams to integrate **Scala** components into larger software ecosystems, ensuring seamless interoperability and adherence to architectural standards.
- Developed and maintained comprehensive knowledge transfer documents to facilitate the onboarding of new team members, ensuring a smooth transition and efficient knowledge transfer process.
- Spearheaded the automation of custom deployments to the **Rio(Jenkins) pipeline**, significantly reducing deployment time and minimizing manual errors.
- Designed and implemented automated environment setup using **Kubernetes** pod to streamline the provisioning of development, testing, and production environments.
- Defined task dependencies using **Airflow's** robust dependency management system, ensuring tasks executed in the correct order.
- Defined schema structures for **Hive** tables, ensuring alignment with data formats and requirements, and accommodating data from **AWS** sources.
- Established and maintained real-time log monitoring systems to track and capture log data from various sources in **Splunk**.

Environment: Java 11, Python, Gradle, AWS, EC2, S3, Kinesis, Athena, IBM WebSphere Application server 8.x/7.x/6.x, IBM HTTP Server 8.x/7.x/6.x, IBM WebSphere MQ Server 7.0/6.0, Spark, Scala, TestNG, Angular 9, Radar, Kubernetes, Shell Scripting, Jenkins, JUnit, log4j, GIT, IntelliJ, Maven, Apache Kafka, Postman, Splunk, Airflow, Hive, Testing, Cassandra, RESTful APIs.

SR Java Developer
Capital One, Wilmington, DE

Feb 2021 – Mar 2022

Responsibilities:

- Implemented data access layer i.e., DAO Classes using Hibernate as an ORM tool and configured xml files according to hibernate framework.
- Creating different Swing layouts and using Swing controls for making UI, taking input from the user, and making changes to the model.
- Designing the screens in compliance with the existing application and developing the swing components accordingly.
- Implemented persistence layer using **Hibernate** that uses the POJOs to represent the persistence database.
- Developed and consumed **RESTful web services** to retrieve configuration JSON documents related to customer.
- Experience with **MongoDB** Installation, Configuring and Monitoring.
- Worked on **MongoDB** database concepts such as locking, transactions, indexes, sharding, replication, schema design, etc.
- Extensive use of swing components like JCombo Box, JList, JCheckBox, JMenu, etc.
- Developed user interface using **Angular JS** to simplify the complexities of the application node.
- Implemented **Kafka** producer and consumer applications on Kafka cluster setup with help of **Zookeeper**.
- Used Micro-service architecture, with Spring Boot based services interacting through a combination of **REST** and **Apache Kafka** message brokers.
- Designing and Deploying enterprise-wide scalable operations on AWS.
- Responsible for maintaining and expanding AWS (Cloud services) infrastructure using AWS stack especially worked with database setup and maintenance on AWS **EC2**.
- Collected metrics for applications using **Splunk** in a cloud-based environment.
- Established infrastructure and service monitoring using **Grafana** for analysis and visualization.

- Wrote **Docker files** for micro services, also dockerized testing environment for those services.
- Leveraged Linux Containers and **AMI's** to create **Docker Images/ containers** images, tagging and pushing images.
- Used **Jenkins** pipelines to drive all micro services builds out to the **Docker registry** and then deployed them to **Kubernetes**, created **Pods**, and managed using **Kubernetes**.
- Designed **Java API** to connect the **Amazon S3** service to store and retrieve the media files.
- Using **Amazon RDS** hosted the **MySQL** database in the cloud.
- Implemented complete **Maven** build life cycle to achieve organized application structure and conflict free dependencies in pom.xml file.
- Implemented and tested the enterprise application with jQuery, Angular.js and Spring MVC.
- Designed & developed webservice in MVC pattern spring framework and used WAS for the deployments.
- Experience with **AWS S3** services creating buckets, configuring buckets with permissions, logging, versioning and Tagging.
- Deployed applications into Continuous integration environments like **Jenkins** to integrate and deploy code on CI environments for development testing.
- Developed powerful Single Page Application and dynamic responsive Web Application with **Angular 8**.
- Used **JIRA** tool for Issue/bug tracking, monitoring of work assignment in the system.
- Developed **Git** controls to track and maintain the different version of the project.

Environment: Java, J2EE, Spring 4.2, Hibernate 4.3, AWS (EC2, S3, IAM), Spring MVC, Spring Boot, Micro Services, HTML, CSS, Angular, Typescript, REST Web Services, MongoDB, Splunk, Grafana, Kafka, Docker, Kubernetes, AWS S3, RDS, MySQL, Maven, JUnit, JMS, Jenkins, JIRA, Git.

Java Developer
PayPal, San Jose, CA

Apr 2020 – Jan 2021

Responsibilities:

- Involved in SDLC Requirements gathering, Analysis, Design, Development and Testing of application developed using Agile methodology.
- Designed web pages using **HTML5, CSS3, JavaScript, Node.JS, React.js, Redux** and developed controllers, services, and DAO layers for the backend using **Spring, Hibernate** Frameworks.
- Modularized front-end CSS and JS code with Sass. Built a real time mouse/click user analytics web service with **Node.js**.
- Worked on **ReactJS** Virtual Dom and React views, rendering using components which contains additional components called custom HTML5 tags. Created reusable and testable **React.js** functional and class components using es6.
- Worked in using **React JS** components, Forms, Events, Keys, Router, Animations and Flux concept.
- Designed and created store, actions and reducers using **Redux** unidirectional data flow.
- Used **Spring MVC** and **Dependency Injection** for handling presentation and business logic.
- Involved in creating the **Hibernate POJO** Objects and mapped using **Hibernate Annotations**.
- Implemented **Spring JPA Repository** for the persistence layer of the application (this layer communicates with the application DB - Oracle DB).
- Used Hibernate Core Interfaces configuration, transactional, session and criteria.
- Development of backend (Server side) using **Core Java, and Java EE**.
- Use **Spring MVC** with Annotations in integrating different layers within the application.
- Implemented modules into **Node.js** to integrate with design and requirements & also back-end service using.
- Node.js and REACT modules and implemented client-side Interface using React JS.

- Data Operations were performed using **Spring ORM** wiring with **Hibernate**.
- Implemented business logic at Server side in Core Java, and Java EE Architecture
- Extensively used **JSON** to parse the data from server side to satisfy the business requirement.
- Implemented features like logging, session validation using **Spring AOP module** and **Spring IOC**.
- Extensively worked on developing **REST** based **Webservices** and consumed them as needed.
- Consumed **JSON RESTful Web Services** and sent responses Created the Application using **React.js** and **Node.js** libraries NPM, gulp directories to generate desired view and flux to root the URLs properly.
- with **Spring MVC**.
- Used **Spring Security** for Authentication and Authorization of the application.
- Used AWS Lambda to run the code in the AWS (Amazon Web Services) and Deployed Spring Boot based micro.
- services Docker container using **Amazon EC2** container services and using AWS admin console. Implemented the function to send and receive **AMQP** messages on **RabbitMQ** synchronously and asynchronously.
- Developed DAOs layer using Cassandra big database and implemented RESTful web services that persists high-volume of data.
- Developed Reporting Dashboard which will generate reports and reduce manual intervention for support activities. Developed with Spring MVC, Core Java and Sybase.
- Experience in installation of **Splunk**, setting up all the required attributes and monitoring the infrastructure implementation.
- Used Maven build tool for creating **JAR** files and automate the process of building **Docker Images** and pushing them to **Docker Private Registry**.
- Worked on deploying the applications in **AWS** as **EC2 instances** and creating snapshots for the **EBS** volumes.
- Used **AWS SDK** for connection to **Amazon S3** buckets as it is used as the object storage service to store and retrieve the media files related to the application.
- Followed **Scrum/Agile methodology** with daily meetings to keep track of the progress and issues pertaining to the projects.
- Used **JUnit** framework for unit testing and integration testing.

Environment: Java/J2EE, Spring 3.5, Spring MVC, Spring Security, Hibernate 4.0, HTML5, CSS3, JavaScript, Node.JS, React.js, Redux, AWS (EC2, EBS, S3), Cassandra, RabbitMQ, Splunk, Junit, Maven.

Java/J2ee Developer
NCP Finance, Dayton, OH

Feb 2017 – Mar 2020

Responsibilities:

- Involved in complete software development life cycle with object-oriented approach of client's business process and continuous client feedback. Worked on designing and developing a complete service-oriented system based on **SOA** principles and architecture in agile development environment.
- Employed **Agile Model** and best practices for software development.
- Engaged in developing the UI by using **HTML, jQuery, and JavaScript** and in some places used **AJAX** to make calls to other services.
- Developed proof of concept Spring Boot microservices for **PCF** pilot.
- Involved in developing the **CSS** sheets for the UI Components.
- Developed web-based application using **spring** framework for MVC architecture.
- Setting up the basic project set-up from scratch of **Spring-Hibernate** App based on Design.

- Used **Spring Framework AOP Module** to implement **logging** in the application to know the application status. Used **Spring DAO Module** along with Hibernate Framework to deal with Database.
- **Spring MVC Framework IOC (Inversion of Control)** design pattern is used to have relationships between application components. It is also used to separate the application configuration and dependency specification from the actual application code.
- Extensively worked on **JPA** as persistence layer, involving **Hibernate** to persist the Java objects as Entities in the database.
- Involved in development of **REST Web Services** using **SPRING MVC** to extract client related data from databases and **SOAPUI** tool is used for testing **RESTFUL API** web services.
- Familiarity with Service oriented architecture (**SOA**) by developing and consuming **Restful** web services based on **Jersey**.
- Wrote corresponding one-one **REST** methods to implement respective change requests (change appliers)
- Tested **REST** services using google chrome's **POSTMAN** plugin.
- Deployed the application in **JBoss** Application Server.
- Worked on **Junit** for creating test cases for all the Business Rules and the application code.
- Called external vendor applications using **Web Services** for delivering notifications.
- Extensively written **jQuery** for responsive event handling. Involved in front end development using **JSP's, JSF and JSTL**.
- Used **XML, WSDL, UDDI, SOAP** Web Services for communicating data between different applications.
- Used the Java Collections API extensively in the application as security protection for **XML, SOAP, REST and JSON** to make a secure Web Deployment.
- Developed Jersey **Restful** Framework of **spring** for consuming and producing web services.
- Developed server-side services using **Java, spring, Web Services (SOAP, Restful, WSDL, JAXB, JAX-RPC)**.
- Experience using **SOAP UI** for testing web services. Created **JUNIT** test case for various functional modules, modified, debugged, and executed using **JUNIT** plugin to **Eclipse IDE**.
- Involved in creating and extracting data from database using **SQL Queries, PL/SQL** on Oracle database.
- Extensively used **log4j** to log regular debug and exception statements.
- Performed code review and unit tested the application using Junit framework. Participated in the **production support** and **maintenance** of the project.

Environment: Java, HTML, CSS, jQuery, JavaScript, Servlets, Spring 3.2, Hibernate 3.5, Spring MVC, RESTful, SQL, Postman, Hibernate, log4j, Junit, Webservices, Junit, Agile, Web Logic, Eclipse, ANT, Apache Tomcat, REST, JSON, SOA, J2EE, Oracle, XML 1.x, JAXB 2.x, XSLT 1.x, JAX-WS, and Web Services.
