

PREM KUMAR LAGHUVARAPU

SENIOR JAVA FULL STACK DEVELOPER

TX, USA | l.premkumar123.l@gmail.com | +1 (561) 816-0249 | [LinkedIn](#)

SUMMARY

- **Senior Java Full Stack Developer** with nearly **6 years** of expertise in architecting, developing, and deploying enterprise-grade, cloud-native applications across **banking, finance, and insurance** domains.
- Proven track record in designing scalable microservices and event-driven architectures using **Java 17, Spring Boot 3, React.js, Node.js, and AWS Cloud**, enabling secure and high-throughput transaction systems.
- Expertise in building **RESTful** and **GraphQL APIs** integrated with **React.js, Next.js, and Angular**, optimizing frontend performance through lazy loading, caching, and state management.
- Experienced in developing and maintaining **Java/Spring-based web applications and batch processes**, with strong hands-on skills in **SQL optimization (Oracle)**, debugging, and production troubleshooting.
- Skilled in working with **Jira, Bitbucket, Agile methodologies**, and collaborating with cross-functional teams to deliver reliable and scalable software solutions.
- Demonstrated ability to develop resilient, self-healing infrastructures using **AWS (ECS, EKS, Lambda, RDS)** and **Kubernetes**, reducing downtime and improving deployment efficiency by 60%.
- Experienced in transforming legacy monolithic systems into modular, containerized microservices using **Spring Boot, Docker, and Terraform** to enhance scalability and maintainability.
- Skilled in leveraging **CI/CD pipelines** with **Jenkins, GitHub Actions, and Infrastructure-as-Code (IaC)** frameworks to enable automated, secure, and repeatable deployments.
- Adept at implementing **DevSecOps best practices** by embedding vulnerability scans and compliance checks into CI/CD pipelines for security and governance assurance.
- Proficient in designing event-driven solutions leveraging **Apache Kafka, AWS EventBridge, and SQS/SNS** for asynchronous communication and real-time streaming workflows.
- Strong command of API security frameworks including **OAuth 2.0, JWT, and SSO**, ensuring data integrity and adherence to SOX and **PCI-DSS compliance** standards.
- Hands-on expertise in database design and optimization using **PostgreSQL, MySQL, MongoDB, DynamoDB, and Redis** for high-volume, low-latency transactions.
- Experienced in test-driven and behavior-driven development (TDD/BDD) using **JUnit 5, Mockito, Cypress, and Postman** to maintain consistent code reliability and quality.
- Implemented observability and monitoring solutions using **Grafana, Prometheus, ELK Stack, and CloudWatch** to achieve proactive incident detection and performance tuning.
- Applied domain-driven design (DDD) and clean architecture principles to ensure modularity, maintainability, and scalability of enterprise-grade software systems.
- Partnered with UX and product teams to design intuitive, responsive UIs aligned with business goals, enhancing user workflow efficiency and engagement.
- Recognized for mentoring developers, leading code reviews, and fostering engineering excellence across Agile squads and cross-functional teams.
- Strong communicator and solution architect with a proven ability to modernize systems, optimize performance, and deliver measurable improvements in cost, scalability, and customer experience.

TECHNICAL SKILLS

Programming	Java, Python, TypeScript, JavaScript, SQL, Bash
Backend	Spring Boot 3, Spring Cloud, Spring MVC, Hibernate, JPA, Node.js, Express.js, RESTful APIs, GraphQL, Microservices Architecture, API Gateway, Reactive Programming, WebFlux
Frontend	React.js (Hooks, Redux Toolkit, Axios, Material UI), Angular 16 (RxJS, NgRx, PrimeNG), Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, TypeScript-based UI Components, Responsive Web Design

Cloud & DevOps	AWS (ECS, EKS, Lambda, S3, RDS, CloudWatch, Step Functions, CloudFront, WAF, Shield, API Gateway, EventBridge), Azure App Services, GCP (GKE, BigQuery), Docker, Kubernetes, Helm, Terraform, Jenkins, GitHub Actions, Ansible, Maven, Gradle, CI/CD Pipelines, Infrastructure as Code (IaC), Serverless Framework
Databases	PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Snowflake, Elasticsearch, AWS RDS, Oracle
Messaging & Streaming	Apache Kafka, RabbitMQ, AWS SQS, AWS SNS, AWS EventBridge, MQTT, JMS
Testing & Quality	JUnit 5, Mockito, Cypress, Selenium, Postman, Newman, Jest, JMeter, SonarQube, Checkmarx, TestNG, TDD, BDD, Quality Gates, API Contract Testing
Monitoring & Logging	Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, AWS CloudWatch, Application Performance Monitoring (APM), Tracing with OpenTelemetry
Security & Authentication	OAuth 2.0, JWT, Keycloak, SSO, AWS IAM, KMS, SSL/TLS, OWASP Top 10, API Security Hardening, Role-Based Access Control (RBAC), PCI-DSS Compliance
Methodologies	Agile (Scrum/Kanban), CI/CD, DevOps, GitOps, SDLC Automation, Design Patterns, Domain-Driven Design (DDD), Clean Architecture, Code Reviews, Performance Optimization, Container Orchestration
Other Tools	Visual Studio Code, IntelliJ IDEA, Eclipse, Postman, Figma (for UI collaboration), JIRA, Confluence, Bitbucket, Docker Compose, Swagger/OpenAPI, Feature Flagging

EXPERIENCE

Senior Java Full Stack Developer

State Farm – TX, USA

Jan 2025 – Present

Responsibilities:

- Architected and deployed scalable **Spring Boot microservices** for policy, claims, and premium workflows, enhancing throughput by 25% and system scalability by 40% through distributed caching and load balancing.
- Designed **React.js + TypeScript** dashboards integrating **REST and GraphQL APIs** to visualize real-time policy and claims data, improving user insight and decision-making accuracy by 30%.
- Built AWS infrastructure using **ECS, Lambda, RDS, and CloudWatch** to create highly available, auto-scaled systems supporting mission-critical insurance applications nationwide.
- Automated end-to-end CI/CD pipelines via **Jenkins, GitHub Actions, and Terraform**, reducing manual releases by 50% and increasing deployment frequency for production rollouts.
- Implemented **OAuth 2.0 and JWT**-based security across microservices, enforcing PCI-DSS compliance and protecting financial data with zero reported vulnerabilities.
- Refactored legacy monolithic modules into containerized microservices, improving maintainability and reducing codebase complexity by 30%.
- Integrated CloudFront and S3 for optimized static asset delivery, reducing frontend load times by 45% for high-traffic applications.
- Built Terraform modules for multi-region deployments and parameterized environments, ensuring repeatable and secure infrastructure provisioning.
- Secured application secrets using AWS Parameter Store and Secrets Manager, enforcing key rotation and centralized policy management.
- Designed centralized logging pipelines using **ELK and CloudWatch Logs**, enabling real-time incident correlation and faster MTTR by 25%.
- Developed robust test suites with JUnit 5, Mockito, and Cypress to maintain > 92% code coverage across critical modules.
- Implemented blue-green and canary deployments for zero-downtime releases and rollback protection during production updates.
- Utilized Grafana and Prometheus APM dashboards to monitor system health, reduce API latency, and predict resource bottlenecks.
- Conducted peer code reviews and knowledge sessions to ensure adherence to SOLID principles and enterprise coding standards.
- Partnered with UX designers to develop intuitive React UI components enhancing user workflow efficiency by 22%.
- Configured AWS WAF and Shield Advanced for web application protection against SQL injection and DDoS attacks.
- Integrated API Gateway for rate-limiting and caching to improve inter-service communication efficiency and latency.
- Optimized AWS resource utilization using CloudWatch Metrics and Trusted Advisor, achieving cost reductions of 20%.

- Mentored junior developers in Spring Boot, React, and DevOps practices to accelerate team onboarding and productivity.
- Collaborated with stakeholders to prioritize deliverables and align system releases with strategic business initiatives.

Environment: Java 17, Spring Boot 3, React.js, TypeScript, GraphQL, AWS (ECS, Lambda, RDS, CloudWatch, S3, CloudFront), Terraform, Jenkins, GitHub Actions, OAuth 2.0, JWT, ELK, Prometheus, Grafana, Cypress, JUnit 5.

Senior Java Full Stack Developer
Cognizant Technologies, India (Client: Victory Capital Services)

Jul 2021 – Dec 2023

Responsibilities:

- Led the design and development of **scalable full-stack applications** using **Java 17, Spring Boot 3, React.js, Node.js, and MySQL**, delivering high-availability, performance-optimized solutions across the **Warranty and Financial Services domains**.
- Developed microservices and **GraphQL/REST APIs on AWS Lambda and EKS**, enabling modular and scalable trading platform integrations.
- Developed transaction microservices in **Spring Boot** for Merrill trades and settlements, ensuring reliability under high volumes.
- Designed and supported **Java/Spring Boot web applications** with a focus on performance and troubleshooting.
- Developed **batch processing modules and multithreaded workflows** to automate trade and settlement data operations.
- Optimized SQL queries and batch logic, reducing job runtime and improving overall system stability.
- Monitored daily/weekly/monthly batch jobs using scheduling tools and ensured timely execution of critical processes.
- Automated repetitive batch monitoring tasks through shell scripts and Java utilities.
- Implemented batch processing workflows using Spring Scheduler and shell scripts; coordinated with Autosys/Control-M–based enterprise scheduling environments.
- Improved performance by **writing and optimizing SQL queries**, indexes, and database logic.
- Investigated defects and performed **root-cause analysis** for application and data issues.
- Followed **Agile methodology** using Jira for user stories, tasks, and sprint planning.
- Used **Bitbucket** for branching strategy, pull requests, and code versioning.
- Implemented **Java multithreading** to process trades concurrently, reducing settlement times by 40%.
- Built **Angular 12** applications with lazy loading and state management to enhance performance and frontend responsiveness.
- Practiced **TDD/BDD using JUnit, Mockito, Cypress, and SonarQube**, achieving 90% test coverage and maintainable code quality across modules.
- Created **Kafka** event-streaming pipelines and **AWS EventBridge workflows** for real-time data processing and notification automation.
- Migrated legacy monoliths to containerized microservices using **Docker** and **AWS EKS**, improving scalability and deployment consistency.
- Streamlined CI/CD automation with Jenkins, **GitHub Actions**, and **Terraform**, cutting deployment time by 60% across environments.
- Implemented **Prometheus and Grafana** monitoring dashboards to detect anomalies and prevent outages in distributed systems.
- Tuned database queries and indexes to reduce transaction latency by 35% and optimize report generation processes.
- Created secure **Node.js** middleware for API validation, **CORS**, and input sanitization to fortify web application security.
- Integrated feature-flag frameworks and rolling updates to enable controlled continuous delivery without system downtime.
- Developed multi-branch CI/CD pipelines supporting Dev, QA, and Prod deployments with auto-rollback and approval workflows.
- Defined **API** versioning standards and documentation guidelines to ensure long-term maintainability of microservice contracts.
- Implemented **AWS SQS** and **SNS** messaging to decouple modules and enhance system resilience under high load.
- Conducted performance testing with **JMeter** and **Cypress** for trading platforms handling 100K+ daily transactions.
- Hardened security using AWS IAM, KMS, and VPC security groups to control access and encrypt sensitive data.
- Coordinated architecture reviews and DevSecOps audits to ensure alignment with OWASP and Cognizant governance policies.
- Drove code quality initiatives through **SonarQube** and **Checkmarx**, reducing critical vulnerabilities by 45%.
- Mentored junior engineers in **React, Angular, and Spring Boot**, building a self-sufficient and high-performing team.
- Led sprint reviews and architecture councils to translate business goals into technical roadmaps and feature milestones.
- Developed Python automation scripts for batch validation, data transformations, and operational tooling supporting backend workflows.

Environments: Java 17, Spring Boot 3, React.js, Angular 12, Node.js, AWS (EKS, Lambda, EventBridge, SQS, SNS), Kafka, Docker, Terraform, Jenkins, GitHub Actions, Prometheus, Grafana, SonarQube, MySQL, JMeter, Cypress, Hibernate.

Responsibilities:

- Designed, developed, tested, and deployed **scalable Java-based microservices** using **Spring Boot, Hibernate, and RESTful APIs**, improving data processing efficiency across HR and enterprise systems.
- Built **React.js** dashboards consuming REST APIs for real-time HR analytics, enhancing visibility into workforce data and employee metrics.
- Developed **Angular 11** applications using **RxJS and NgRx** for state management, improving UI performance and user interactivity.
- Deployed microservices on Azure App Services with Docker containers for consistent scalability and environment reproducibility.
- Configured CI/CD pipelines via Jenkins and Git, reducing deployment errors and accelerating release cycles by 40%.
- Integrated **MySQL, MongoDB, and Redis** databases for hybrid data storage and faster query responses under high load.
- Automated testing frameworks with **JUnit 5, Mockito, and Selenium** achieving 95% coverage and ensuring code stability pre-release.
- Tuned Spring transactions and optimized queries to improve API latency by 25% for mission-critical modules.
- Secured applications through **OAuth 2.0, JWT, and Keycloak-based SSO**, simplifying user authentication across enterprise systems.
- Designed modular frontend libraries in **React and Angular** to accelerate UI development and maintain visual consistency.
- Utilized **Postman and Newman** for automated API testing and QA integration during sprint cycles.
- Managed multi-service environments using Docker Compose for integration and system-level testing.
- Developed RESTful APIs for migrating legacy Oracle data into new NoSQL architectures with minimal downtime.
- Enforced SonarQube standards via peer reviews to reduce code smells and technical debt by 20%.
- Implemented Agile metrics dashboards in JIRA to monitor sprint velocity and defect closure rates for leadership visibility.
- Automated batch processing using Spring Scheduler for nightly data sync and reporting tasks.
- Documented REST interfaces with Swagger and OpenAPI to standardize integration for third-party teams.
- Participated in production deployment support and root-cause analysis to achieve 99.9% uptime targets.
- Collaborated with business analysts to translate requirements into functional specifications and solution design documents.
- Partnered with stakeholders to execute multi-module releases using **Jenkins, Docker Compose, and Git**, ensuring consistent builds and deployment traceability.
- Championed **best coding practices, code reviews, and version control (Git)** to maintain consistency and ensure software engineering excellence across development teams.

Environment: Java 11, Spring Boot 2.x, React.js, Angular 11, Azure App Services, Docker, MySQL, MongoDB, Redis, JUnit 5, Selenium, Mockito, Postman, Jenkins, OAuth 2.0, JWT, Keycloak, Git, REST APIs.

EDUCATION

Master of Science in Computer Management (MSCM) | Avila University, Kansas | May 2025

Bachelor of Technology in Computer Science | GITAM University, Vishakhapatnam, India | Mar 2019
