

REVATHI VADLAMUDI

Lead Full Stack Architect | Java | Azure | Spring Boot | AWS | Python | Microservices | AppSec | AI
+1 (571) 603-9352 | revathijava82@gmail.com | LinkedIn | Portfolio

SUMMARY

Lead Full Stack Architect with 13+ years building and modernizing Java and Spring Boot platforms for large scale banking and financial products. Owns end to end design, development, and operation of microservices, REST APIs, and cloud deployments on AWS and Azure, with strong emphasis on scalability, security, and production reliability. Partners closely with product, security, and platform teams to drive legacy modernization, CI/CD automation, and incident free releases across distributed teams. Currently expanding hands on experience with AI enabled workflow automation by integrating LLM driven services into Java based backends.

AREAS OF EXPERTISE

- **Backend:** Java 21, J2EE, Spring Boot, Spring MVC, Spring Security, Microservices, REST APIs, SOAP, Python, Node.js
- **Frontend:** Angular, TypeScript, JavaScript, React, NgRx, RxJS
- **Databases and Data:** Oracle, PostgreSQL, MySQL, MongoDB, DynamoDB, SQL development and query optimization
- **AWS and Cloud Services:** AWS EC2, S3, RDS, Lambda, API Gateway, Step Functions, Glue, Redshift, CloudWatch, AWS CLI, Azure, Docker, Kubernetes
- **DevOps and CI/CD:** Jenkins CI/CD, Git, GitHub, GitLab (familiarity), Docker
- **Testing and Quality Engineering:** JUnit, Mockito, Cucumber, Selenium (familiarity) Integration testing, defect resolution across test cycles
- **Tools and Development Environment:** IntelliJ IDEA, VS Code, DBeaver, Postman, PuTTY
- **Security:** OAuth2, OIDC, JWT, RBAC, TLS/SSL, Secure Coding, OWASP
- **SDLC and Engineering Practices:** Software Development Lifecycle (SDLC), Agile/Scrum, Code Reviews, Unit Testing, Production Support
- **Gen AI and Developer Productivity:** GitHub Copilot, ChatGPT, LLM-based service integrations (POCs)

WORK EXPERIENCE

Senior Full Stack Engineer

Accenture - Client: Capital One, VA, USA /

Jul 2024 - Present

- Led system-level design and development of backend services using Java, Spring Boot, and microservices, supporting core banking workflows
- Built and maintained REST APIs consumed by Angular frontend applications and downstream systems
- Developed backend components primarily in Java, with Python and Node.js used for supporting utilities and integrations where required
- Designed and enhanced Angular frontend components using TypeScript and JavaScript, working with RxJS and NgRx patterns for state management
- Integrated with external financial platforms using secure REST-based interfaces
- Implemented Kafka based asynchronous messaging to decouple services and support event-driven processing
- Worked with PostgreSQL and Oracle, writing and optimizing SQL queries for transactional and

reporting workflows

- Supported document-oriented storage using MongoDB, alongside relational databases
- Deployed and supported applications on AWS, working with EC2, S3, RDS, and CloudWatch for monitoring and validation
- Supported containerized deployments using Docker and Kubernetes, ensuring consistent runtime environments
- Assisted with AWS orchestration and configuration, with familiarity using Lambda, ECS, CloudFormation, Step Functions, Glue, and Redshift in platform workflows
- Used AWS CLI for environment validation, deployment verification, and operational support
- Owned CI/CD pipelines using Jenkins and Git, automating build, test, and deployment processes
- Designed and executed unit and integration tests using JUnit, Mockito, and Cucumber, resolving defects across test cycles
- Worked with QA teams during system, integration, and UAT testing, fixing defects and stabilizing releases
- Used development tools including IntelliJ IDEA, VS Code, Postman, DBeaver, and PuTTY during development and troubleshooting
- Acted as primary on-call engineer, resolving production issues and collaborating with cross-functional teams
- Communicated effectively with product, QA, security, and platform teams to support SDLC execution and delivery timelines
- Leveraged GitHub Copilot and ChatGPT to assist with code generation, refactoring, unit test creation, and documentation

Lead Full Stack Architect

iSolvers Inc - Client: Mosaic Apps, VA, USA /

Feb 2024 - Jun 2024

- Owned complex full stack enhancements across Spring Boot services and React frontend, focusing on performance fixes and UX improvements for production users
- Acted as primary onshore lead for a multi-location team, clarifying requirements, reviewing offshore code, and enforcing API and UI contracts
- Reduced rework by ~20% through stronger API and UI alignment, code review rigor, and clear acceptance criteria
- Designed and rolled out new REST endpoints and refactored existing endpoints to support incremental feature rollout without breaking legacy consumers
- Established and maintained backward compatible API behavior for existing consumers during refactoring cycles
- Extended Kafka usage to additional event streams, improving observability and resilience of asynchronous workflows
- Improved resilience of asynchronous processing by standardizing event handling expectations and integration points across services
- Tightened CI/CD pipelines with additional quality gates and deployment checks, cutting release turnaround time by around 30%
- Reduced failed deployments by strengthening pipeline validation and deployment readiness checks before production promotion
- Supported Kubernetes based deployments by validating container specifications, config maps, and environment variables across environments
- Coordinated UAT and post release support cycles with product, QA, and DevOps teams to resolve issues quickly
- Maintained sprint delivery commitments by aligning technical execution to release timelines and UAT feedback loops
- Partnered with stakeholders to prioritize fixes and enhancements based on production impact and user experience

- Drove consistent engineering practices across locations through documentation, reviews, and standards enforcement
- Provided end to end ownership from design through production support for assigned modules and releases

Senior Full Stack Engineer

Cognizant - Client: Northern Trust, IL, USA /

Oct 2023 - Jan 2024

- Coordinated with offshore React and Java development teams as a key onshore engineer, improving delivery quality and reducing rework by ~20%
- Developed and enhanced Spring Boot microservices supporting financial services workflows and backend business processing
- Designed and implemented data persistence using Azure **Cosmos DB** for scalable, low-latency access to distributed application data
- Developed and enhanced React based frontend components aligned with backend API behavior and sprint goals
- Implemented LaunchDarkly feature flags to control feature rollout, enable safe experimentation, and reduce risk during production releases
- Supported end to end feature delivery by aligning technical implementation with sprint planning and design discussions
- Broke down complex features into actionable engineering tasks to improve sprint execution and delivery predictability
- Integrated Kafka for asynchronous event processing, improving system reliability and reducing tight coupling between backend services
- Strengthened delivery workflows by setting up and stabilizing build and deployment processes for smoother onshore and offshore handoffs
- Supported CI/CD pipelines using Jenkins and Docker, reducing deployment related issues by ~25%
- Designed and executed **integration test cases** validating end to end scenarios across Spring Boot APIs, Kafka flows, and database interactions
- Collaborated with QA teams to validate end to end scenarios across backend APIs and React UI flows during system and UAT testing
- Supported UAT and production issues by troubleshooting, triaging, and coordinating fixes across development and QA teams
- Improved release readiness by validating build artifacts, feature flag configurations, and deployment steps before onshore sign off
- Maintained technical documentation and shared guidance to improve consistency across teams and reduce recurring defects

Lead Full Stack Architect

iSolvers Inc - Client: Mosaic Apps, VA, USA /

Mar 2023 - Sep 2023

- Led Spring Boot **microservices** and React UI delivery for core modules, improving page responsiveness by 15 to 20% through API payload optimization and frontend state management
- Defined REST API contracts and error handling standards for React consumers, reducing integration defects and rework from UI teams by roughly 20%
- Established initial system and environment setup, including dev and test environments, CI jobs, and basic monitoring
- Cut onboarding time for new offshore developers by providing environment setup guidance and initial delivery structure
- Introduced Kafka based event flows for key business processes, decoupling services and improving scalability under peak usage

- Implemented Jenkins and **Docker** based CI/CD pipelines, reducing manual release effort by about 30% and improving deployment consistency
- Coordinated with QA on end to end testing for high risk features, lowering post release UI and API integration defects across sprints
- Provided post deployment support across backend, frontend, and DevOps changes, stabilizing early releases and building stakeholder confidence.
- Reduced failed deployments by strengthening pipeline validation and deployment readiness checks before production promotion
- Supported Kubernetes based deployments by validating container specifications, config maps, and environment variables across environments
- Coordinated UAT and post release support cycles with product, QA, and DevOps teams to resolve issues quickly
- Maintained sprint delivery commitments by aligning technical execution to release timelines and UAT feedback loops
- Partnered with stakeholders to prioritize fixes and enhancements based on production impact and user experience
- Drove consistent engineering practices across locations through documentation, reviews, and standards enforcement

Senior Java / J2EE Developer | Lead

Commerztech India Pvt Ltd - Client: Moduslink, TN, USA /

Aug 2020 - Mar 2023

- Led development of Java and Spring based backend services supporting enterprise logistics workflows for US clients, with emphasis on reliability, scalability, and maintainability for high-volume operational processing
- Centralized core business logic in backend services, significantly reducing duplicated logic across applications and improving long-term maintainability, with an estimated 20% reduction in redundant processing
- Designed and implemented REST APIs consumed by Angular applications, improving service reusability and accelerating delivery of new features by ~15-20%
- Developed Angular frontend components aligned with backend service contracts, minimizing duplication between UI and server layers
- Automated build and deployment workflows using Jenkins CI/CD pipelines, reducing manual deployment effort by ~30-40% and improving release consistency
- Supported Docker containerization and Kubernetes deployments, reducing environment-related deployment issues and improving cross-environment stability
- Deployed and supported applications across Azure environments, improving operational readiness and reducing environment setup time
- Coordinated closely with US onshore stakeholders and India offshore teams to manage dependencies and sequencing across releases, reducing integration rework by approximately 15-20%
- Mentored 4-6 junior developers on Java, Angular, and clean architecture principles, contributing to improved code quality and reduced recurring defects

Senior Software Programmer

Ebix Software - Client: Paqqets, MA, USA /

May 2015 - Aug 2020

- Developed Spring Boot based backend services supporting insurance and financial workflows with transactional consistency requirements.
- Designed REST APIs integrated with **MySQL** and JPA to support high-volume transactional processing.
- Collaborated with US onshore business analysts and India based teams to clarify functional requirements and regulatory constraints.

- Implemented Spring Security and role based access control to protect sensitive customer and policy data.
- Strengthened application security posture by enforcing authentication, authorization, and secure coding practices.
- Tuned **SQL** queries and stored procedures to improve response times for frequently executed transactions.
- Supported production releases, bug fixes, and minor enhancements for live customer-facing systems.
- Participated in root cause analysis for production issues and contributed to corrective fixes.
- Actively participated in Agile ceremonies including sprint planning, reviews, and retrospectives.
- Mentored junior developers through code reviews, improving adherence to coding standards and best practices.

Software Programmer

PB Systems India Pvt Ltd - Client: Serality, MA, USA /

Sep 2012 - May 2015

- Built web application modules using Struts, JSP, Hibernate, and **MySQL** to support enterprise business workflows.
- Developed backend services and controllers to implement core business logic and validations.
- Implemented **DAO** layers using Hibernate to standardize database access and transaction management.
- Optimized database queries to improve reliability and performance of backend operations.
- Worked with US onshore stakeholders to validate business rules and functional requirements.
- Collaborated with India based development teams to align backend implementations with UI requirements.
- Supported iterative enhancements as business requirements evolved over time.
- Participated in **Agile** ceremonies including sprint planning and daily standups.
- Assisted with testing cycles by fixing defects and supporting validation efforts.
- Contributed to code reviews and knowledge sharing to improve overall team code quality.

EDUCATION

- **Bachelor of Technology in Electronics and Communication Engineering | India - 2011**
