

ROHINIPRIYANKA GUDEMARANAHALLI

Rohinipriyanka20.ford@gmail.com PH:3137157986 | Troy, MI

<https://www.linkedin.com/in/rohinipriyanka>

PROFESSIONAL SUMMARY

Product Owner / Product Manager with **4.5+ years of direct product ownership experience and 8+ years total industry experiences** delivering digital products across cloud platforms, IoT/connected systems, enterprise applications, analytics tools, and customer-facing interfaces. I am skilled in **product strategy, roadmap planning, user research, cross-functional leadership, Agile execution, and data-driven decision-making.**

Strong technical foundation in **cloud integrations (Azure/AWS), APIs, microservices, event-driven systems, messaging frameworks (Kafka, MQTT), telemetry pipelines, diagnostics, and distributed device workflows.**

Adept at transforming complex business needs into **clear product requirements, scalable architectures, frictionless user experiences, measurable KPIs, and high-quality releases.** Experienced collaborating with engineering, UX, QA, data, architecture, and business stakeholders across global teams.

PMP® aspirant – exam scheduled JAN 2026 | Authorized to work in the U.S. for any employer (H4 EAD)

CORE COMPETENCIES

Product Strategy & Leadership: Roadmaps, OKRs, Feature Prioritization, Requirements elicitation, process mapping, Customer Experience

Agile Leadership: Scrum, SAFe, Kanban, PI Planning, Cross-Team Delivery Leadership

Backlog & Delivery: Epic/Feature Breakdown, User Stories, Acceptance Criteria

Technical Skills: Cloud (Azure/AWS), APIs, Event driven Microservices, Kafka, MQTT, JSON

Data & Integrations: SQL, Telemetry Pipelines, Diagnostics, IoT/Edge Workflows

Cross-Functional Collaboration: Engineering, UX, QA, Architecture, Vendors

SDLC & Quality: Refinement, Estimation, Definition of Done, KPI Tracking, UAT

PROFESSIONAL EXPERIENCE

Agile Software Product Manager | Oct 2022 – July 2024

Polaris Industries, Novi, MI

- Led product delivery for multi-platform digital solutions spanning cloud services, mobile applications, embedded systems, dashboards, and data workflows.
- Owned **product strategy, roadmap and backlog** for enterprise connectivity, navigation, data ingestion, diagnostics, and cloud-integrated features.
- Managed **two cross-functional Agile teams (16 members)** across UX, cloud, systems, mobile, QA, and embedded, ensuring alignment to business goals and release timelines.
- Managed program timelines, risks, dependencies, and integration plans across embedded, cloud, and mobile workstreams.
- Executed risk and issue management activities, driving mitigation plans and cross-functional resolution to protect delivery commitments.
- Partnered with UX/HMI teams to refine in-vehicle digital experiences and update flows aligned with safety and brand standards.

- Defined detailed user stories, technical requirements, Workflows, acceptance criteria, and architectural considerations across multiple product lines and stakeholders.
- Built transparency via **Power BI dashboards, Confluence/JIRA reporting, and custom JQL queries** for KPIs, defect trends, velocity, capacity, and system health.
- Led PI Planning, quarterly forecasting, sprint planning, and release planning to manage feature delivery and reduce ambiguity.
- Strengthened Agile SDLC discipline through structured refinement, estimation workshops, dependency boards, and readiness gates.
- Coordinated post-release validation, lessons learned, and data-driven feedback loops to enhance future delivery cycles.
- Executed hands-on API validation using Postman, reviewing JSON payloads, schemas, and integrations to support faster defect triage.
- Improved **delivery predictability by 20% and reduced post-release defects by 15%** through proactive planning and cross-functional issue resolution.

Product Owner | Jan 2020 – Sep 2022

Ford Motor Company, Dearborn, MI

- Owned end-to-end delivery for Ford's **Connected Vehicle OTA Software Update Platform**, covering telemetry ingestion, microservices, data validation, event processing, and remote large scale phased OTA rollout workflows.
- Collaborated with **Ford GDIA, cloud engineering, cybersecurity, and analytics teams** to enhance telemetry workflows and customer-data processing across Ford's enterprise ecosystem.
- Defined and monitored KPIs include data health, service reliability, rollout metrics, and end-user impact; fed insights into roadmap evolution.
- Partnered with cybersecurity and cloud operations to ensure platform compliance with enterprise architecture and security standards by working closely with engineering teams using Azure, microservices, HTTPS/MQTT, and Kafka-style pipelines to validate data flows and event processing
- Improved OTA notification UX and message clarity, reducing customer confusion and **increasing successful update completions by 20%**.
- Led sprint planning, grooming, impact analysis, and stakeholder communication across global teams.
- Performed API testing using Postman, validating request/response behaviors and integration across microservices.
- Used Git, Postman, JSON payload analysis, and API validation to support integration and feature acceptance.

System Engineer | June 2018 - Jan 2020

Fiat Chrysler Automobiles, Auburn Hills, MI

- Supported **ADA connected vehicle system**, enabling bi-directional data transfer between vehicles and cloud dashboards, collecting real-time telemetry, diagnostic events, signal-based data, and logs from distributed devices to Azure dashboards.
- Developed python scripts and created dashboards and analytical views **using ReactJS, C#/.NET, and Azure**, for telemetry validation and diagnostic message automation
- Participated in backend API development and validation workflows involving data ingestion, microservices, and gateway communications.
- Performed system integration testing using Python-based test tools and supported message-based data exchange across embedded systems.

- Ensured system compliance with **cybersecurity, ASPICE, SDLC processes, and cloud-update protocols.**
- Acted as **liaison between technical and product teams**, aligning feature delivery with business goals.

Software Engineer- Web Applications | Sep 2017 - Dec 2017

Right response LLC, Troy, MI

- Developed UI components and full-stack features for a reporting system used by education-sector clients.
- Collaborated with backend engineers to ensure smooth data flow and consistent application behavior.

Front End Developer | May 2017 - Aug 2017

SVN Technologies, Ann Arbor, MI

- Built responsive UI screens and improved usability through iterative testing and enhancements.

Pursued master's degree in computer engineering (Jan 2016 – May 2018)

Software Engineer- UI /Frontend (Banking Applications) | Jan 2014 - Dec 2015

Accenture Services Pvt. Ltd, Bangalore, India

- Developed ADA-compliant UI components and workflows for financial applications (Citi, HSBC).
- Enhanced SQL interfaces and UI features supporting improved performance and accessibility.

TECHNICAL SKILLS

Product & Agile: Jira, Confluence, Scrum, SAFe, OKRs, User Story Mapping, Roadmapping

Programming: Python for automation/testing, SQL, XML/XSLT, C#, .Net, Java, Embedded

Cloud & API's: Azure (pipelines, app services, dashboards), AWS, Kafka, MQTT/HTTPS

Data & Reporting: Power BI, Excel, Data Validation, Telemetry Workflows

Other: Git, Postman, Figma (collaboration), Diagnostics, Integration Testing

EDUCATION

- Master's in computer engineering at Wayne State University, Detroit, MI, USA **GPA:3.8/4, Jan 2016 - May 2018**
- Bachelor's in computer engineering at Visvesvaraya Technological University, Belgaum, India **GPA:3.9/4, June 2009 - Aug 2013**

CERTIFICATIONS

- Certified Scrum Product Owner [CSPO]
- Artificial Intelligence for Project Managers
- Certified Scrum master [CSM]
- **Project Management Professional (PMP®) – Exam Scheduled JAN 2026**
