

RAHUL YADAV

Senior Golang Developer | Full Stack Engineer

+91-8962342065 | rahuldeveloper410@gmail.com | [LinkedIn](#) | India

PROFESSIONAL SUMMARY

Senior Golang Developer with **6+ years of experience** specializing in designing and building **scalable distributed systems, microservices architectures**, and high-performance APIs. Expert in **Golang, React, Cloud-Native Architecture, Kubernetes, and Kafka**. Proven track record of optimizing system performance and reliability across telecom and real-time analytics platforms. Experienced in **zero-trust security, observability**, and **AI/LLM integration**.

CORE TECHNICAL SKILLS

- **Backend:** Golang (Gin, Fiber, Echo), Node.js, Python, gRPC, Microservices, Event-Driven Systems.
 - **Frontend:** React.js, React Native, Redux, Angular, HTML5, CSS3, Chakra UI, Material UI.
 - **Databases:** PostgreSQL, MySQL, MongoDB, Cassandra, Redis (Caching).
 - **Cloud & DevOps:** AWS (EC2, S3, Lambda), Azure, Docker, Kubernetes, CI/CD, Terraform.
 - **Messaging:** Kafka, Event Streaming, WebSockets.
 - **Security & Monitoring:** JWT, OAuth2, Zero Trust, Prometheus, Grafana, ELK Stack, OpenTelemetry.
 - **Tools:** Git, Jira, Agile, OpenAI API, Prompt Engineering.
-

PROFESSIONAL EXPERIENCE

ZENQUA PVT. LTD

Senior Full Stack Golang Developer

July 2024 – Present

- **Architected scalable Golang microservices** using gRPC and Kafka, facilitating high-throughput event-driven data processing.
- **Developed React-based operational dashboards** to provide real-time visibility into platform health and system metrics.
- **Implemented Zero-Trust service communication** and distributed tracing to enhance system security and reliability.
- **Optimized concurrency patterns** using Goroutines, resulting in a significant reduction in backend latency.
- **Managed Cloud-Native deployments** across AWS and Azure using Kubernetes and Docker to ensure 99.9% uptime.
- **Established an Observability stack** utilizing Prometheus, Grafana, and OpenTelemetry for proactive incident response.

- **Engineered high-performance REST APIs** using Golang (Gin/Echo), supporting high-concurrency user traffic.
 - **Built distributed microservices** leveraging message queues and caching layers to increase system throughput.
 - **Optimized database performance** in PostgreSQL and MySQL through advanced indexing and query tuning.
 - **Strengthened system security** by implementing robust authentication and authorization workflows via JWT and OAuth.
 - **Automated deployment pipelines** (CI/CD) for containerized applications, reducing manual deployment errors.
-

KEY PROJECTS

DelaphoneGH – Telecom Analytics Platform *Tech Stack: Golang, gRPC, PostgreSQL, AWS, Kubernetes, React.js*

- **Architected a fault-tolerant distributed system** using Golang and gRPC, implementing circuit breakers and retry logic to ensure 99.9% system availability.
- **Orchestrated containerized microservices** on Kubernetes, utilizing Horizontal Pod Autoscaling (HPA) to manage fluctuating telecom data traffic efficiently.
- **Optimized data ingestion** by leveraging Goroutines for high-concurrency processing, reducing latency for real-time analytics reporting.

E-Commerce Microservices Ecosystem *Tech Stack: Golang (Gin), PostgreSQL, Docker, Nginx, Swagger, JWT*

- **Engineered a modular backend** consisting of Auth, Catalog, Orders, and Payment services, ensuring data integrity through ACID-compliant PostgreSQL transactions.
- **Implemented a centralized API Gateway** with integrated rate limiting and JWT-based authentication to secure inter-service communication.
- **Streamlined development workflows** by documenting comprehensive RESTful APIs with Swagger/OpenAPI and containerizing the environment using Docker.

EV Charging Real-Time Booking Platform *Tech Stack: Golang, PostgreSQL, AWS, React, Redux, Docker*

- **Designed a scalable time-series indexing strategy** in PostgreSQL to support real-time charger availability lookups and high-frequency status updates.
 - **Developed secure payment transaction workflows** and integrated third-party gateways to handle sensitive financial data reliably.
 - **Built real-time monitoring dashboards** using React and Redux, providing administrators with live visibility into charging station utilization and health.
-

EDUCATION

Bachelor of Engineering (B.E.)

RGPV University, Bhopal

Graduated: 2019
