

RANAJITH REDDY

Irving, TX | 469-796-2726 | ranajithr0618@gmail.com

SUMMARY

Full-Stack Developer with 3+ years of experience in developing robust web applications using Spring Boot, Django, and React.js. Proven track record in designing RESTful services, managing AWS cloud infrastructure, and implementing Agile methodologies. Adept at database management with MySQL and NoSQL, and skilled in containerization with Docker and Kubernetes. Seeking to leverage expertise to drive innovative solutions and enhance user experiences.

SKILLS

Methodology: SDLC, Agile, Waterfall

Languages: C, C++, Java, SQL, Python

Frameworks: Spring MVC, Spring Boot, Spring Security, Microservices, JPA, Node.js, React.js, Django, Flask

J2EE Technologies: Servlets, JSP, JSTL, JavaBeans, JDBC

Web Technologies: HTML, CSS, JavaScript, TypeScript, Bootstrap, JQuery, JSON, XML

Cloud Technologies: AWS, Microsoft Azure, Docker

Databases: MySQL, MS SQL Server, PostgreSQL, Oracle, MongoDB

Tools: Git, GitHub, UML, Maven, Jira, Confluence, Jenkins, Junit, JMeter, SoapUI

Operating Systems: Windows, Linux, Mac

EXPERIENCE

Honeywell, USA | Full Stack Developer

Jun 2023 – Apr 2024

- Enhanced the real-time HVAC control and monitoring feature for the Smart Building Automation Platform using React.js integrated with Spring Boot, allowing users to track and adjust HVAC systems in real-time with OAuth2-based authentication.
- Designed and implemented 20 RESTful services with Spring Security for improved access control, and created interactive SPAs using React.js, boosting user engagement by 30%.
- Integrated JavaBeans with Java Server Pages (JSP) to manage business logic and presentation layers for HVAC control, improving system performance and security for millions of users.
- Managed relational databases using MySQL and MS SQL Server, focusing on optimal schema design and query performance to ensure efficient data handling.
- Deployed, configured, and maintained the HVAC control applications on the Apache Tomcat server, improving application performance and ensuring consistent availability.
- Implemented Mixpanel trigger points throughout the platform to gain insights into user interactions, driving data-informed improvements in system usability.
- Executed over 200 unit tests using JUnit to ensure application reliability and robustness.
- Contributed to CI/CD pipeline development and participated in Agile sprints, ensuring efficient and timely delivery of features with continuous integration and deployment.

Hexaware Technologies, India | Full Stack Developer

Mar 2020 - Jun 2022

- Built a financial management system from planning to deployment, optimizing transaction processing, account management, and financial reporting, and implemented Hibernate as an ORM framework for smooth data access.
- Utilized Spring Core annotations for Dependency Injection, developed 30+ REST APIs with Spring MVC, and employed Spring Boot for a microservices architecture, resulting in robust and scalable applications.
- Crafted and maintained databases (SQL or NoSQL) according to application requirements, ensuring data integrity, security, and scalability, which improved data management and application performance.
- Led the deployment of AWS EC2 instances, configuring virtual networks and overseeing the setup of 30+ instances while automating deployment processes using CloudFormation templates.
- Integrated BlueMonkey (BM3) testing suite into CI/CD pipelines via Jenkins, improving testing efficiency by 12%.
- Enhanced Hexaware Alerts, increased processing speed by 13%, and deployed the application to Amazon Kubernetes Engine (AKS) for multi-tenancy and automatic updates.
- Led a cross-functional team, increased project completion rate by 67%, and earned Employee of the Month recognition.

EDUCATION

Masters in Computer Software Engineering

May 2024

Arizona State University, Tempe, AZ

Bachelor in Computer Science Engineering

June 2022

Indian Institute of Information Technology, Andhra Pradesh, India
