Atlanta, GA

abhaypatidar2jpic_s2z@indeedemail.com

+1201708-8568

- > Highly experienced professional with deep understanding of retail operations and a proven track record of success in merchandising, assortment strategy, inventory management, digital payments, omnichannel strategy, customer segmentation, customer relationship management, and business process improvement in B2B, B2C, and C2C operations
- > Enabled transformative changes and generated valuable solutions using various business improvement and enhancement ideas, and using the principles of Design Thinking, Empiricism, Lean Thinking and Cross-functionality.
- > Experienced in different Software Development Life Cycle (SDLC) approaches, which include Waterfall, Spiral Model, Extreme Programming, and the Agile including Scrum, Kanban, Scrumban, and Scaled Agile Framework (SAFe).
- > Proficient in carrying out thorough assessments and analysis of business processes using techniques as GAP analysis, Risk analysis, Impact analysis, Cost-benefit analysis, As is-To be analysis, Root cause analysis, SWOT analysis, MOST analysis, PESTLE analysis, Competitor analysis, Demand Forecasting, Requirement analysis and Feasibility studies.
- > Proficient in requirement elicitation techniques like Survey/Questionnaires, Interviews, Brainstorming, Focus group sessions, Requirement workshops, Interface analysis and Document analysis, and Joint Application Development (JAD) sessions.
- > Skilled in drafting essential business artifacts such as Business Requirement Document (BRD), Functional Specification Document (FSD), Requirements Traceability Matrix (RTM), System Requirement Specification (SRS), Risk Register, RACI matrix, Data Flow models, change request document, project charter, Readiness document, and work breakdown structure.
- > Expert in leveraging Unified Modeling Language (UML) to create static and dynamic Activity, Sequence, Use Case, and BPMN diagrams, fostering seamless collaboration among teams. Proficient in utilizing MS Visio, Figma, Balsamiq and Lucidcharts to craft low and high-fidelity mockups and wireframes, ensuring effective communication of design concepts.
- > Extensively involved in Scrum ceremonies, Backlog Grooming, release planning, sprint planning, daily standups, sprint review meetings, sprint retrospective meetings, and SAFe such as PI Planning, Po Sync and Art Sync.
- > Worked with PO in defining project scope, product vision, objectives, user stories, Minimum Viable Product (MVP), Minimum Releasable Feature (MRF), Minimum Marketable Feature (MMF), defining Key Performance Indicators (KPI).
- > Proficient in maintaining scrum artifacts such as Statement of Work (SOW), Product backlogs, Sprint backlogs, Product increment, velocity charts, and Information Radiators such as Sprint burndown charts and Product burndown charts.
- > Skilled in prioritizing and estimation techniques like MoSCoW, KANO, 100-point method, Dot voting, and value stream mapping, Affinity Mapping, Planning Poker, Relative mass valuation, T-shirt sizing. Proficient in performing horizontal slicing and vertical slicing on epics to decompose them into user stories for feature-based teams and component-based teams.
- > Solid experience in building user stories that match the INVEST criteria. Created acceptance criteria, definition of done and definition of ready while taking SMART criteria into account and in coordination with product owners, and the scrum team.

- Well versed in Online Transaction Processing (OLTP) and Online Analytical Processing (OLAP) including ROLAP, MOLAP and HOLAP and experience in performing OLAP operations like Roll-up, Drill-down, Slicing, Dicing, and creating Pivot table.
- Expertise in using data models for clear data structure definition, facilitating effective communication between business and technical teams. Guided database design, data integration, and impact analysis, ensuring data-driven decisions and governance. Conducted in-depth exploration of source systems, analyzing data structures, relationships, and processes.
- Proficient in data profiling and comprehensive quality assessments to ensure reliable data integrity. Collaborated effectively with technical teams to understand integration points, extraction methods, and transformation processes for effective sourcing. Used Informatica PowerCenter to perform ETL jobs, mapping requirements & coordination with developers to design reports.
- Proficient in SQL, PLSQL, Azure SQL, MS SQL, and PostgreSQL, adept at extracting and analyzing data from databases using functions, joins, unions, views, clauses, aggregate functions, and joins. Expertise utilized for data-driven reporting.
- Expertise in various Data Definition Language (DDL), Data Manipulation Language (DML), and Data Control Language (DCL) statements, ensuring data integrity, consistency, and security. Hands-on experience in designing and implementing data transformation processes, including ETL and ELT, to load data into data warehouses and data lakes. Proficient in Python and Hadoop, leveraging these tools to automate and optimize data processing and manipulating tasks.
- Expertise in AWS tools, including API Gateway, DataSync, Kinesis, S3, Lambda, and Redshift, to architect, manage, and automate data processes, enabling secure and efficient data handling, real-time analytics, and data-driven decision-making.
- Experienced in performing API testing using tools like Postman. Knowledge of Simple Object Access Protocol (SOAP) and Representational State Transfer (REST) and review documentation using Swagger. Knowledge of performing CRUD operations (Create, Read, Update, Delete) and PATCH their status codes and response times.
- Experienced in various types of testing including Black Box, Manual, System, Performance, Load, Stress, Regression, Automated, Functional, Non-Functional and User Acceptance Testing (UAT). Knowledgeable about Software Testing Lifecycle (STLC) and proficient in documenting test plans, test scripts, test cases, test scenarios, test analysis reports, bug logs.
- Proficient in using JIRA as an end-to-end Project Management and issue tracking tool with various addons like Tempo Timesheets for time tracking, Jenkins and GitHub for Continuous Integration, Cucumber for automation testing.
- Expertise in BI tools like LEAD BI, Tableau, Power BI to visualize business statistics, create analytical dashboards, heat maps, pie charts, area charts, bar graphs, tree maps, ad hoc reports, live and extract and other forms of reporting methods.
- Expertise in creating BI reporting dashboards that enhance data-driven decision-making processes and contribute to a deeper understanding of complex customer and sales data, facilitating more informed strategies in the e-commerce sector.
- Extensive knowledge of continuous integration and continuous deployment with Jenkins and development techniques like Test Driven Development (TDD), Behavior Driven Development (BDD), and Acceptance Test Driven Development (ATDD).

Skills and Tools:

SDLC Methodologies Safe, LeSS, Waterfall, Scrum, Waterfall-Scrum hybrid, Scrumban, and Kanban

Authorized to work in the US for any employer

Work Experience

Sr. Business Systems Analyst

The Home Depot, Inc - Atlanta, GA

February 2022 to Present

Dynamic Pricing System: This project aims to develop and implement a comprehensive Dynamic Pricing system that enables the company to optimize pricing strategies, enhance profitability, and maintain a competitive edge in the market. The system is encompassed of a user-friendly frontend, a robust backend, and a well-defined API layer to ensure seamless data exchange, pricing calculations, and integration with existing business processes.

POSSUM System: The project aims to develop an open-source Java application that exposes hardware capabilities of retail peripherals via a standard Web API. It consumes industry standard Java POS service objects and is supported by hardware vendors. It aims to mature the retail peripheral ecosystem and drive the adoption of Java POS standards.

Roles and Responsibilities:

- Developed a comprehensive understanding of retail peripheral management challenges, including compatibility issues, complex integration processes, and limited flexibility, and adopted open-source standards and standardized APIs to streamline peripheral integration, promote vendor competition, and enhance POS system flexibility.
- Developed a comprehensive understanding of the Dynamic Pricing system with existing business systems, such as CRM, ERP, and POS systems, to facilitate data exchange and synchronized pricing updates. Analyze industry trends, competitor pricing strategies, and customer behavior patterns to inform pricing decisions
- Conducted GAP Analysis to fully understand the TO-BE process flow by considering all the functional and non-functional needs. Interacted one-on-one with Subject Matter Experts, meticulously documenting the requirements given by all stakeholders.
- Maintained and kept track of Requirement Traceability Matrix (RTM) to ensure all the Functional requirements are addressed at the use case and created Business Process Model and Notation (BPMN) Diagram and UML diagrams and documented it.
- Developed various kinds of low-fidelity prototypes and high-fidelity prototypes, mockups and wireframes using Figma tool.
- Reviewed high-level requirements using SWAG and assisted Product Owner in defining the product vision, project roadmap and scope of the project and prioritizing using MoSCoW and Kano and estimating using Planning Poker and T-Shirt Sizing.
- Created multiple estimable user stories following INVEST criteria using Jira and supported the creation of DOR and acceptance criteria and used SMART criteria to convert a story to "Done." Assisted the Product Owner in vertically slicing user stories.
- Performed capacity or velocity planning, as necessary. Developed sprint burnup charts and product burnup charts to track development. Conducted Scrum ceremonies like Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective.
- Helped the development team in acquiring, processing, and analyzing real-time data for the Dynamic Pricing System, utilizing Amazon Kinesis Data Streams. Conducted advanced data cleaning and transformation technique with Amazon Glue, facilitating the streaming of processed data to AWS SageMaker for real-time predictive analysis.
- Implemented storage solutions by utilizing Amazon Redshift for one set of data and storing structured data from AWS SageMaker in Amazon RDS for the Dynamic Pricing System. Deployed microservices-

based pricing system on AWS Elastic Beanstalk, and generated comprehensive reports and analytics on inventory levels, demand forecasts, and key performance indicators (KPIs).

- Collaborated with development team to ensure the scalability and effectiveness of automated inventory management system.
 - Created API Documentation using Swagger for dev team. Used Amazon API Gateway to connect Cloud data. Used content like Authentication, Using-guides, Endpoints, example request, and response for creating API document. I conducted tests on the CRUD operations (GET, PUT, POST, and DELETE), HTTPS to ensure that they performed as expected. I tested these operations in both production and development environments to identify any discrepancies that may occur in different environments.
 - Developed SQL queries using joins, unions, group by, order by, aggregate, having, like, in functions to extract data to manipulate and calculate information using MS SQL Database to fulfill data needs and identified tables from which data is being extracted and reviewed existing Stored procedures, Views, supported application developers by tuning SQL queries for better performance.
 - Facilitated several test cases for User Acceptance Testing (UAT), Regression Tests and documented the Test Plan, Test Scenarios, Test Scripts, Test Cases, Test Reports, and Requirements Traceability Matrix (RTM) using Cucumber.
 - Maintained the agile board using JIRA documented various issues using Confluence and Smart Sheets.
 - Implemented AWS QuickSight to generate real-time reports and analytics on inventory levels, demand forecasts, and other key metrics to optimize inventory management and decision-making.
- Environment: Agile-Scrum, Figma, Amazon kinesis data streams, Amazon Redshift, Amazon RDS, Amazon Glue, SAP Business One, Salesforce, AWS SageMaker, Amazon API Gateway, Swagger, JIRA, AWS QuickSight, Confluence, Smart sheets

Sr. Business Systems Analyst

Dell Technologies Inc - Round Rock, TX

March 2020 to September 2021

Real time Inventory Management System: The Project aims to develop a real-time inventory management system using machine learning to optimize inventory, set prices, and generate recommendations. Collect data from various sources, process it with machine learning, and provide real-time updates and automated actions.

Modern Returns Processing and Warranty Dispositioning Platform: The project aimed to improve returns processing and warranty dispositioning program by implementing formalized and automated systems. The objective was to maximize warranty credit and compliance at branch and technician level. To achieve this, the project involved the implementation of new operational processes and the utilization of a number of customs, web-based tools. The project focused on creating an efficient and robust User Interface, along with a backend system that facilitated a smooth, error free workflow.

Roles and Responsibilities:

- Developed a comprehensive understanding of inventory tracking, demand forecasting, understocking and overstocking order fulfillment, and supplier management processes, and adopted the latest machine learning and automation techniques to optimize inventory levels, set prices, and generate recommendations.
- As a Sr. Business System Analyst in the Supply Chain domain, I played a pivotal role in developing an end-to-end solution for streamlining the returns processing and warranty dispositioning system, by developing and implementing a web-based application. Helped ideate and build the application using JavaScript, on the Angular framework with HTML and CSS.

- As a part of the requirement gathering process, I have conducted elicitation techniques like questionnaires, surveys, brainstorming sessions, focus groups and interviews with subject matter experts (SMEs) using Salesforce CRM tools.
 - Performed System Analysis and GAP Analysis to understand the AS-IS process and collaborated with the team to design TO-BE process based on the requirements gathered and designed TO-BE process using Business Process Modeling and Notation (BPMN)
 - Collaborated closely with the development team to use Figma to produce mock-ups, wireframes, prototypes, or UML diagrams that displayed a blueprint and captured the core of our concept as well as the desired system architecture, design, and data models.
 - Assisted the Scrum Master and Product Owner, facilitated and time-boxed the SCRUM ceremonies and assisted in creating sprint reports (Burndown/Burnup Charts, information radiators). Helped Product Owner to Prioritize the Product Backlog items using MoSCoW approach, Vertical slicing epics to user stories with acceptance criteria pertaining to INVEST criteria and scrum team in estimating story points by planning poker to prepare Product Backlog Items (PBI's) for developing Sprint tasks.
 - Helped data scientists in collecting, processing, and analyzing real-time data using Azure Event Hubs and cleaned, transformed the data with Azure Data Factory which was streamed to Azure Machine Learning for real-time predictive analysis. We stored the above data in Azure Blob Storage, and we stored the structured data from Azure Machine Learning in Azure Cosmos DB.
 - Deployed microservices-based inventory management system on Azure App Service, and generated comprehensive reports and analytics on inventory levels, demand forecasts, and key performance indicators (KPIs).
 - Documented REST API via JSON, used Azure API Management, and converted it to API documentation stored in swagger. I conducted tests on the CRUD operations (GET, PUT, POST, and DELETE), to ensure that they performed as expected. I verified the response time, test result status and error codes were responding efficiently and provided error messages to the users.
 - Developed SQL queries to extract data to manipulate and calculate using Azure SQL Database to fulfill data needs and identified tables from which data is being extracted and reviewed existing Stored procedures by tuning SQL queries for better performance.
 - Assisted the Testing team in creating Test Plan, Test Scripts, Test Cases, Test Reports and collected Test Data for successful completion of Integration Testing and Functional Testing using Azure Test Automation and documented all the test results.
 - Assisted in Regression testing and automated testing using cucumber to ensure the performance is meeting the requirements.
 - Maintained the Agile board using Jira and deployments using Azure DevOps and documented various issues using Confluence.
 - Implemented Power BI to generate real-time reports and analytics on inventory levels, demand forecasts, and other key metrics to optimize inventory management and decision-making.
- Environment: Agile-Scrum, Azure API Management, Swagger, Azure SQL Database, Azure Data Factory, Azure Test Automation, Azure Blob Storage, Azure Cosmos DB, Azure Machine Learning, Confluence, Power BI, Salesforce.

Sr. Business Systems Analyst

Verizon Communication, Inc - New York, NY

April 2018 to March 2020

Customer Loyalty Program and Interface Development Project: The scope of the project was to maximize customer retention, enhance engagement, and drive sales growth. This was accomplished through the implementation of a robust loyalty program and the development of an efficient, user-friendly interface. The loyalty program played a crucial role in providing a seamless user experience and strengthening

customer relationships. The project successfully improved customer satisfaction, fostered loyalty, and contributed to overall business performance.

Roles and Responsibilities:

- Conducted extensive research to understand the client's business goals, current technology landscape, customer needs, and competitive landscape to develop a customer loyalty program that maximized customer retention, enhanced engagement, and drove sales.
- Conducted an extensive Market Trends analysis, Cost-Benefit analysis, Customer Segmentation and Behavioral analysis to understand the AS-IS system of the current Customer retention and Facilitated Focus Groups, Brainstorming sessions, JAD sessions to gather requirements and collaborated with the development teams to design the TO-BE systems.
- Created Low-fidelity and High-Fidelity Prototypes and Mockups and UML diagram like Sequence diagrams, Activity diagrams using Lucidcharts and Business Process Modelling and Notation (BPMN) diagrams using Balsamiq.
- Assisted the Product Owner in maintaining the Product Backlog, dependencies and User Story Mapping and Helped the PO to do vertical slicing on the epics and used Azure DevOps to draft the User Stories and to maintain the Product Backlog.
- Participated in ART (Agile Release Train) ceremonies and facilitated communication between business and development team.
- Assisted the PO in maintaining the Program Backlog and the dependencies across different teams within the ART. Conducted User Story Writing sessions and determined Acceptance Criteria for PSPI during PI Planning to maintain the Program Backlog.
- Assisted the Scrum Master in conducting ART ceremonies such as PI Planning, System Demo, Product Increment review and Inspect and Adapt workshops. Assisted in creating sprint reports (Burndown/ Burnup Charts, information radiators).
- Created Data Mapping Document for data mapping between legacy and current system with the help of business for defining data flow between data source and target. Used Informatica as ETL (Extract, Transform and Load) tool in the migration process.
- Tested REST API using CRUD Operations, response times and error codes. Assisted development team in API testing using Postman to check API interacts with data in JSON, XML format using REST standards and documented using SWAGGER tool.
- Developed SQL queries using joins, unions, group by, order by, aggregate functions to extract data to manipulate and calculate information using Azure SQL Database to fulfill data needs and identified tables from which data is being extracted.
- Participated and assisted the QA team by building test strategies and test plans for testing processes like load testing, smoke testing, sanity testing, user acceptance testing, performance testing, beta testing, load testing and regression testing.
- Maintained the agile board and deployments using Azure Kubernetes Services and documented various issues using Confluence.
- Used Microsoft Dynamics 365 for building data visualizations and reports like summary reports, matrix reports, dashboards.

Environment: Agile-SAFe, Azure Data Factory, Azure Kubernetes Service, Azure Cosmos DB, Lucid charts, Balsamiq, Informatica v7.1.2, v2.0, Postman, Swagger, Cucumber, JIRA 5.2, Confluence, Microsoft Dynamics 365

Business Systems Analyst

Myntra Design Pvt. Ltd - Bangalore, KARNATAKA, IN

August 2016 to January 2018

Cloud Order Management: The goal of the project was to properly manage order processing capacity to increase order fulfilment capabilities while maintaining cost-effectiveness. This was achieved by implementing Cloud Order Management, it was also intended to achieve an integrated approach to reverse logistics, inventory management, and omnichannel order fulfilment.

Roles and Responsibilities:

- Responsible for gathering requirements and analyzing supply chain performance in conjunction with customers system and needs to improve the supply chain process and acted for business improvement.
- Performed Gap Analysis, Cost-Benefit Analysis, Feasibility Study to understand AS-IS process and collaborated with the team to design TO-BE process based on the requirements which were gathered using Brainstorming sessions and Focus Groups.
- Created and maintained the Project Charter, Complete System, Business Requirement Document (BRD), System Requirement Specification (SRS), Product Backlogs, Sprint Backlogs, Burnup and Burndown chart and other relevant documentation.
- Worked closely with the development team to create mock-ups, wireframes, prototypes, and Use Case diagrams using Lucid Chart that envisioned system architecture and assisted data architects in building the data warehouse and schema designing.
- Experienced in the ceremonies of scrum and assisted the PO in prioritizing using KANO and estimating using Bucket System the product backlog and sprint planning meeting. Acted as a proxy product owner and proxy scrum master whenever necessary.
- Demonstrated expertise in testing REST APIs, performing CRUD operations and analyzing request/response mechanisms. Utilized SOA techniques to map URLs and supported development team with Postman and Swagger documentation.
- Generated SQL queries using joins, unions, and transformation rules to fetch data from the SQL Server database systems.
- Participated and worked with the QA team in writing test cases and test scripts for sanity testing, smoke testing, and integration testing to ensure all the features are tested exhaustively. Maintained an RTM using HP ALM to track all the test cases and issues.
- Involved in tracking the status of the sprints in JIRA and creating the Project Closure document using Confluence.
- Used Tableau to create dashboards where business insights can be visually represented and Salesforce to create summary reports.

Environment: Waterfall-Scrum Hybrid, JIRA, Confluence, Lucid Chart, Postman, Swagger, PL/SQL Developer, HP ALM, Salesforce, MS Outlook, MS Excel, Tableau.

Business Analyst

Girnar Software Private Limited - Gurgaon, Haryana

2015 to July 2016

Fleet Management Improved by IoT: The project was to develop an IoT-based fleet management system for their Eindhoven base to improve traceability, efficiency, safety, and customer service. IoT devices collected data from the trucks, such as GPS location, speed, engine temperature, and fuel consumption. We optimized transport routes resulting in a 10% reduction in fuel consumption. Truck conditions were regularly monitored, and prompt alerts were generated if any problems were detected. Customer SLAs were met by providing real-time data on the status of its deliveries.

Roles and Responsibilities:

- Conducted GAP analysis to assess the current state (As-Is) of the project and define the desired future state (To-Be).

- Collaborated with cross-functional teams to identify and resolve supply chain bottlenecks, in order to streamline processes.
- Authored and delivered BRDs, FRDs, and SRS documents, translating complex business needs into concise documentation for cross-functional teams, ensuring alignment to project goals (in extension business goals) and successful project execution.
- Helped end user realize value for the project with visuals by creating mockups and wireframes using Balsamiq tool.
- Defined the parameters needed to be collected from IoT devices (Raspberry Pis) in all trucks connected to Azure IoT Hub.
- Defined the inputs needed from IoT Hub and their corresponding outputs to Power BI, along with necessary authentications.
- Configured route load planning to optimize truck loads based on weight and volume specifications, increasing truck utilization.
- Played a pivotal role in designing the data warehouse by creating conceptual and logical models. This involved mapping entities using Entity Relationship (ER) diagrams and documenting keys for easy reference during the development phase.
- Created UML Diagrams to design the trucking system components. Developed mockups and wireframes to visualize UI.
- Performed data mapping and migration to seamlessly integrate data from legacy systems into Azure Stream Analytics, employing Extract, Transform, Load (ETL) using Azure Data Factory for efficient data processing and integration.
- Assisted in the creation of testing documents such as Test Plans and Test Summary Reports and developed Test Scenarios.
- Conducted User Acceptance Testing to ensure delivery of expected & desired functionality, ensuring a high-quality product.
- Used SQL scripts/queries extensively for data verification at the backend as per the requirements of the mapping document.
- Used Power BI to visualize the high-resolution data and deliver near real-time visibility into key supply chain metrics and facilitate data-driven decision-making.

Environment: Waterfall, Azure IoT Hub, Azure Cosmos DB and Data Lake, Azure Data Factory, Azure Stream Analytics, Redact, Azure App Service and Power BI, JIRA, Balsamiq.

Jr. Business Data Analyst

Snapdeal Pvt. Ltd - Gurgaon, Haryana

May 2015 to October 2015

Customer Segmentation Techniques: This project aims to explore customer segmentation strategies in the realm of digital marketing, analyzing purchase history, demographics, and other relevant factors to identify distinct customer segments. The insights gained will be utilized to craft targeted marketing campaigns and optimize product development initiatives for enhanced effectiveness.

Roles and Responsibilities:

- Responsible for collecting and ingesting data from various sources, including marketing automation platforms, customer relationship management (CRM) systems, and e-commerce platforms. Ensure data quality and consistency before proceeding to further analysis.
- Clean and prepare data for analysis by handling missing values, removing outliers, and transforming data into a format suitable for analysis. Ensure data integrity and adherence to data quality standards.
- Create insightful visualizations to represent customer segments, their characteristics, and purchase behavior. Use data visualization tools to effectively communicate segmentation results to stakeholders.

- Analyze customer segments to understand their needs, preferences, and purchasing patterns. Develop targeted marketing campaigns tailored to specific segments, ensuring alignment with overall marketing goals.
- Develop and implement effective marketing strategies for each customer segment, leveraging insights from segmentation analysis. Optimize campaign performance using data-driven decision-making.
- Analyze customer segmentation data to identify product preferences and pain points within each segment. Provide insights to product development teams to enhance product features and optimize the customer experience.
- Utilize customer segmentation data to personalize customer interactions and improve overall customer satisfaction. Implement CX initiatives tailored to specific segments, addressing their unique needs and preferences.

Environment: Waterfall, MS SQL server, MS Access, SQL Server Integration Services, MS Excel, JIRA, MS SharePoint,
