+1201) 5107991

- > Have excellent problem-solving, analytical, communicational, and interpersonal skills, coupled the with ability to interact with individuals and groups at various levels in the organization, ability of quick learning, make informed decisions, strong work ethic.
- > Skilled in regulatory acts and compliances like Bank Secrecy Act, Dodd Frank Act, Anti Money Laundering (AML), Know your Customer (KYC), Customer Due Diligence (CDD), Financial Action Task Force (FATF), Mortgage, Collateral management, National Automated Clearing House Association (NACHA), ACH, UCPDC 600, SWIFT MT 700, Bank Secrecy Act (BSA), Sarbanes-Oxley Act (SOX), Suspicious Activity Report (SAR), Basel I, Basel II, Basel III, among others.
- > Profound knowledge and extensive working experience in various phases of System Development Life Cycle (SDLC) methodologies, encompassing Waterfall, Agile Scrum, Waterfall-scrum Hybrid and Scaled Agile Framework (SAFe).
- > Proficiently and systematically experienced in capturing requirements from business stakeholders by conducting elicitation techniques such as JAD sessions, Workshops, Brainstorming, Interviews, Benchmarking, Prototyping, Document Analysis
- > Highly proficient in documenting artifacts like Business Requirement Document (BRD), Functional Requirement Specification (FRS), System Requirement Specification (SRS), Requirement Traceability Matrix (RTM), Work Breakdown Structure (WBS), and Change Request Document, ensuring comprehensive project documentation.
- > Assisted Project Manager and Product Owner in outlining detailed project action plans to capture, define roadmap, timelines, milestones, vision, risks, objectives, PERT chart, Critical Path Analysis (CPA) and Work Breakdown Structure (WBS).
- > Designed diverse architectural and UML diagrams, including process flow diagrams, swim lane diagrams, use case diagrams, wireframes, mock-ups, and prototypes using tools like Balsamiq, Lucid Chart and MS Visio allowing key stakeholders to thoroughly comprehend application design.
- > Comprehensive working knowledge of Agile-Scrum and expertise in scrum ceremonies like Release Planning, Backlog grooming, Sprint Planning, Daily Scrum stand-up, Sprint Review meeting and Sprint Retrospective meetings. Proficient in Scaled Agile Framework (SAFe) ceremonies like PI planning, Scrum of Scrums, and Innovation-Planning Iterations.
- > Actively taken part in release strategy of Minimum Viable Product (MVP), Minimum Marketable Feature (MMF) and Minimum Releasable Feature (MRF) for products entering the market. Possess comprehensive knowledge on creating User stories that meets INVEST (Independent Negotiable Valuable Estimable Small Testable) criteria and Acceptance criteria.
- > Efficient in performing Vertical and Horizontal slicing of Epics, breaking them down into user stories, giving story point estimation using Planning Poker, T shirt sizing, Relative Mass Valuation, Fruit Basket techniques.
- > Assisted in Product backlog Items using prioritization techniques like MoSCoW, KANO, Forced Ranking and 100 Pointers.
- > Assisting the team in achieving the goal of delivering Potentially Shippable Product Increment at the end of each iteration.

- > Highly accomplished in handling complex Data Warehouse projects, excelling in creating data mapping documents, identifying source, target, types of transformations such as aggregator, filter, joiner, expression transformations using informatica.
- > Broad execution and information on OLAP (MOLAP, ROLAP and HOLAP) operations like Roll Up, Drill Down, Slice, Dice and Pivot. Proficiency in Data Warehouse configuration using techniques like Kimball design and Inmon's Corporate Information.
- > Proficient in creating and managing artifacts like Data Dictionary, Data Glossary, and Data Mapping Document.
- > Proficiently well versed on web services like RESTful and SOAP API based on XML, JSON using HTTP/HTTPS within the Three-Tier Architecture, N-Tier Architecture (multi-tier architecture), and Service Oriented Architecture (SOA).
- > Closely operated with the API & Web Services team while developing new APIs and enhancing existing APIs along with preparing comprehensive API technical & testing documentation using Postman and Soap UI software for efficient system processes.
- > Experienced in User Acceptance testing (UAT) and actively contributed to black box, Manual, System, System Integration, Performance, smoke, scalability load, stress, regression, Automation, GUI, Functional, Non-Functional, Sanity testing with in-depth knowledge of Software Testing Life Cycle (STLC), and adept at creating test plan, test cases and Test scenarios.
- > Acquainted with Relational Database Management Systems (RDBMS), exposure to various Databases such as Oracle and Microsoft SQL Server, and skilful at designing and implementing SQL queries using Joins (Inner Joins, Left Joins, Right Joins and Outer Joins), Unions, select within Select, Order By, Group by and Aggregate Functions to extract and manipulate data.
- > Worked on JIRA for meticulous Issue tracking, Bug tracking, and comprehensive project management, used confluence tool used to help teams to collaborate and share knowledge efficiently and for creating and storing different artifacts for projects.
- > Thorough understanding of Business Intelligence (BI), creating reports, interactive, analytical dashboards using Tableau and Power BI, which are instrumental in generating insights within an organization's data for visualization and decision making.
- > Proficient in ServiceNow's IT Service Management module with a focus on finance operations. Experienced in gathering, documenting, and analyzing financial requirements, ensuring alignment with ServiceNow ITSM solutions.
- > Skilled in designing and implementing workflow automation solutions within ServiceNow to optimize financial processes.
- > Effective at collaborating with cross-functional teams, financial professionals, and ServiceNow experts.

Skills and Tools:

Banking and Finance Domain

Capital Markets, Investment Banking, Derivatives (Futures, Options, Swaps), ESG, Corporate Finance, Asset Management, Risk Management, Trade Settlement, Trade Surveillance, Compliance, Stocks, Bonds, Commodities, Financial Statements Analysis, Accounting, FP&A

Compliance / Regulations

US GAAP, CFTC, Basel 3, Dodd-Frank Act, KYC, Anti Money Laundering (AML), SAM, OFAC monitoring, OFSAA, Actimize, Mantas, MiFID II, Consolidated Audit Trail (CAT)

Wire-Transfer/Payment platforms SWIFT, ACH (Automated Clearing House), PayPal, Stripe, Square
Software Development Life Cycle Agile-Scrum, Waterfall, Water-Scrum Fall, SAFe, Kanban, Scrumban

Project Management tools MS-Project, MS Share Point, JIRA, Confluence, Load Runner, HP Quality Center

Work Experience

Project Manager/ Business Systems Analyst

Bank of America - Charlotte, NC

December 2021 to Present

Asset Allocation System

The Scope of the project is to create Personalized Asset Allocation System application which is focusing on personalization and risk management for its clients, which was an enhancement from their standard system. Personalized system resulted in tailored investment portfolios, closely aligned with client's financial goals, risk tolerances, time horizons and enhancing risk adjusted returns.

The system also added few goals to their service which included retirement goal and college goal.

Roles and Responsibilities:

- Developed an extensive understanding of Financial Instruments, Asset Allocation, Equities, Commodities, Government Bonds, and Corporate Bonds.
- Analyzed the Prior Documentation and Business Processes w.r.t, Retirement Goals to understand the As-Is & To-Be System.
- Engaged in a comprehensive stakeholder engagement approach, including JAD sessions, interviews, interface analysis, prototyping, and focus groups, to thoroughly comprehend and document client requirements.
- Implemented MVP to market in a timely way and successfully kicked off multi-million-dollar projects from discovery.
- Fostered collaboration among cross-functional teams, including project managers, tech leads, developers, data scientists, financial analysts, and compliance experts, to ensure successful project execution.
- Worked closely with subject matter experts to define goal-based investment strategies.
- Create product strategy and roadmap in alignment with the business strategy & needs. Consult with management and personnel to identify, analyze, define, and document business needs, objectives, use cases, current operational procedures, problems, inputs and outputs, and requirements.
- Defines project requirements by identifying project milestones, phases, and elements; forming project team; establishing the project budget.
- Expertly facilitated the design and execution of risk assessment questionnaires, which included liquidity, strategic risks, operational, financial, compliance, or solvency, collaborating with risk management experts to ensure robust risk profiles.
- Created Use Cases, Use Case specification, UML Diagrams such as Activity, Sequence Diagrams and BPMN using VISIO.
- Vertically Sliced the Epics according to the functionality and created User Stories using INVEST criteria and guided the Planning Poker to estimate effort and Moscow technique to prioritize in Sprint Planning meetings and Backlog Grooming sessions.
- Defined Acceptance Criteria for the User Stories and ensured it has rightful DOR and DOD in place before starting the Sprint.
- Developed and executed comprehensive test plans, ensuring the reliability and accuracy of ServiceNow ITSM financial solutions.

- Collaborated with cross-functional teams, financial professionals, and ServiceNow experts to ensure successful project delivery.
 - Implemented change management strategies to facilitate the adoption of ServiceNow ITSM solutions within the finance department.
 - Led change readiness assessments to evaluate the organization's preparedness for upcoming changes, identifying potential challenges and implementing strategies to mitigate resistance.
 - Devised and executed comprehensive communication plans to keep stakeholders informed about project milestones, timelines, and the benefits of proposed changes, fostering transparency and trust.
 - Documented financial requirements, workflow automation processes, process workflows, and ServiceNow ITSM project plans for reference and reporting purposes.
 - Demonstrated proficiency in architectural integration by assisting in deploying the user interface on Amazon CloudFront, utilizing Amazon EC2 for content delivery and Amazon S3 for storing images and videos, resulting in an optimized user experience and scalable system performance.
 - Led data integration of various sources of data, including historical data, market data, economic indicators, and risk factors to Amazon RDS and assisted for complex analysis using Amazon Redshift.
 - Assisted team in creating comprehensive API SWAGGER documentation, reviewed & approved with Technical Lead.
 - Performed API testing using POSTMAN thereby using REST APIs to check the Request and Response body by using GET/POST/PUT/DELETE operations, checked for any Error Codes and checked the Performance of the API's.
 - Assisted in designing Test Plans, Test Cases, Test Scripts, and Test Scenarios to perform Functional Testing, Smoke Testing And Regression Testing and logged down defects using Azure Devops and documented the results and shared it on Confluence.
 - Facilitated User Acceptance Testing with UAT cases, captured feedback & resolved issues with the users.
 - Generated, analyzed, and reported various KPIs such as Client Satisfaction and Retention Rates, Portfolio Diversification, Asset Usability Rate and ESG Metrics, by leveraging Power BI for data visualization.
- Environment: Scrum, MS Visio, Boot Strap, Flux, CSS, AWS Architecture such AWS SQS, Amazon S3, AWS RDS, AWS EMR, AWS Redshift, AWS Lambda, AWS EC2, Swagger, Postman, Power BI, Azure Devops, ServiceNow & Confluence

Project Manager/ Business Systems Analyst

Bank of America - Charlotte, NC

April 2019 to July 2021

Trading algorithm using Machine Learning

The objective of the project was to build a trading algorithm by using Machine Learning and Natural Language Processing (NLP). The system leveraged historical market data, fundamental and macroeconomic factors to make trading decisions in real-time. The system was designed to minimize risks and maximize returns using Risk Management, Trade Surveillance, Trade Supervision and Compliance Roles and Responsibilities:

- Developed good understanding of fundamental (supply-demand) factors and macro-economic factors that affect financial markets including Equity, Commodity and Bond markets. Analyzed chart patterns, trends, and technical indicators.

- Got familiarized with different trading technologies including Charles River IMS, MarkitWire, DTCC, Colleen, Arcadia.
 - Conducted data analysis within ServiceNow to support informed financial decisions, ensuring data accuracy and reporting.
 - Worked with Compliance team to understand compliance and regulations such as US GAAP, CFTC, Know Your Customer (KYC), Anti Money Laundering (AML), OFSAA, Actimize, Mantas, SAM, OFAC offering, Dodd-Frank Act, Basel III, etc.
 - Performed Gap analysis, risk analysis, Impact analysis, Cost-benefit analysis, and feasibility study such as PESTLE analysis.
 - Worked with Traders to capture high-level business requirements through elicitation techniques like interviews and surveys.
 - Assisted Product Owner in prioritizing user stories using MoSCoW method and estimating them using Planning Poker method
 - Analyzed prior documents related to IPO such as Business requirement document (BRD), Functional requirement document (FRD), System requirement specification (SRS), and their organizational structure to deeply understand the structure of project.
 - Conducted User Story Writing sessions and determined Acceptance Criteria meticulously for PSPI during PI Planning event.
 - Assisted Product Owner in maintaining the Program Backlog and the dependencies across different teams within the ART.
 - Collaborated closely with the Product Owner to expertly execute vertical slicing and skillfully utilized Azure DevOps to diligently draft comprehensive User Stories, ensuring a well-maintained Program Backlog with a keen focus on project efficiency.
 - Assisted Scrum Master in conducting ART ceremonies such as PI Planning, System Demo, Product Increment review and Inspect and Adapt workshops. Also assisted in creating sprint reports (Burndown/ Burnup Charts, information radiators).
 - Documented REST API via JSON, used Azure API Management, and converted it to API documentation stored in swagger.
 - Conducted tests on the CRUD operations (GET, PUT, POST, and DELETE), strictly ensuring that they performed as expected.
 - Verified that the response time and error codes were responding efficiently and provided error messages to users.
 - Developed SQL queries using joins, unions, group by, order by, aggregate functions to extract data to manipulate and calculate information using Azure SQL Database to fulfill data needs and identified tables from which data is being extracted.
 - Reviewed existing Stored procedures, supported application developers by tuning SQL queries for better performance.
 - Maintained the agile board, orchestrated deployments using Agile DevOps and documented various issues using Confluence.
 - Teamed with Risk Management team to create Risk Register, Risk Incident report, Trade Settlement report, Transaction.
- Monitoring report and Compliance Incident report to identify and mitigate potential risks associated with the model.
- Collaborated with QA teams to verify that algorithm functions as intended, handles various market conditions, and provides accurate and reliable predictions. Participated in User Acceptance Testing (UAT) to gather feedback from stakeholders and traders, and help the development team to implement necessary modifications.

Environment: SAFe, Charles River IMS, Microsoft Power Automate, MS Visio 2019, Azure API Management, Swagger, Azure SQL, Database, Azure Data Factory, Azure Test Automation, ServiceNow, Azure DevOps, Confluence, Azure Power BI.

Sr. Business Systems Analyst

State of Illinois - Department of Health - Chicago, IL
February 2018 to April 2019

Implementation of Expense & Budget Monitoring Website in Department of Health's (DoPH)

The project involved implementation of Department of Public Health's (DoPH) public health initiatives through implementing various public safety systems like Aids Information Management System (AIMS), HIV/AIDS Performance Measures Dashboard, Counseling and Testing Linkage System (CTLS), Master Patient Index (MPI), and so forth. The focus was to enhance business processes and client engagement by creating interactive applications for expense and budget monitoring as per Ryan White Part B program and Patient Care Community program initiatives, and monitoring patient care activities for HIV/AIDS affected individuals to ensure compliance with Health Resources and Services Administration (HRSA), and public safety reporting requirements.

Roles and Responsibilities:

- Conducted requirement analysis sessions, including brainstorming, focus groups, and Joint Application Development (JAD) sessions collaboratively with clinical, administrative, and technical stakeholders to elicit requirements and deliver the product.
- Created various artifacts like Business Requirement Document (BRD), Use Cases, Data Mapping Documents, Process Flow Diagrams, User Manuals, UML diagrams including Sequence, Activity and Use Case Diagrams. This collaborative effort involved extensive engagement with epidemiologists, informatics, and surveillance departments, and technical stakeholders.
- Implemented agile SDLC framework, skillfully refining the business process, and promoting seamless collaboration between team members, managing team progress, and ensuring completion of sprint tasks during iterative time boxed sprint cadence.
- Assisted with validating mapped data variables for implementation of Form 1628, Electronic Lab Ordering (ELO) and Electronic Lab Reporting (ELR) through CTLS application, serving clients and providers in various counties and areas.
- Collaborated closely with developers during the code promotion phase for pushing code from dev and test to prod environment, to implement successful logic and functionality to capture Ryan White Part B Budget Initiatives within the AIMS application.
- Validated Medicare and Medicaid claim details, XML scripts, HL 7 messaging protocols for secure exchange of patient information, and actively assisted with statistical and predictive data analytics, and BI reporting through Logi Analytics.
- Ensured comprehensive tracking of HIV/AIDS episodes, risk factors, client demographics, epidemiological metrics, and so on, for patients, and implemented application workflows, to satisfy public safety program requirements of various Public Health initiatives.
- Assisted Project Manager in creating comprehensive project plans, project charter, monitoring risks, timeline, scope, resources, schedule, constraints, WBS, and developing status reports through integration of VSTS with MS Project & Excel.
- Created mockup screens through Balsamiq tool to demonstrate proposed application features according to applications various business users, capturing business rules for creating prototypes and to elaborate requirements to the development team.

- Worked proactively as a scrum master in various sprints, actively facilitating Scrum ceremonies like Sprint Planning, Daily Scrum, Sprint Review, Sprint Retrospective sessions and resolved impediments affecting team performance.
- Conducted user story writing workshops to illustrate creating user stories that satisfy INVEST criteria, assigning acceptance criteria to the user stories, and to elucidate concepts of story points, velocity, and capacity planning.
- Conducted Backlog Grooming and Sprint Planning sessions with Product Owner and development team to refine Product Backlog and Sprint Backlog by applying various Prioritization and Estimation Techniques to estimate effort of the project.
- Collaborated with database analysts (DBA) analyzing data requirements for Master Data Management (MDM) to create robust Master Data Repository, containing lookup tables and data attributes essential for use by multiple source systems.
- Created Software Release Documents, Project Change Request (PCR), Database Change Request (DCR) documents, and assisted with change management process, involved accommodating changes in requirements by business users during sprints.
- Ensured the diligent implementation of technical debt management strategies by development team to deliver a PSPI which is fully tested and functional, thereby satisfying the KPIs, performance metrics for the organization, and definition of done.
- Assisted with creating an extensive data requirements document for Extraction Transformation and Load (ETL) process, data cleansing, scrubbing, data deduplication, normalization, and data migration between source and target systems.
- Reviewed Stored Procedures, SSIS Packages, statistical reports and skillfully wrote SQL queries for CRUD (Create, Read, Update, Delete) operations to validate client data in various databases, and generated Business Intelligence (BI) reports.
- Ensured HIPAA compliant automated workflows through enterprise applications to monitor HIV/AIDS surveillance activities, ensuring contractor and subcontractor budget allocation features, and CAREWare program initiatives.

Environment: Waterfall- SCRUM hybrid methodology, MS Visio, Enterprise architect, Informatica, Share Point, MS Outlook, MS Project, MS office Suite (Word, Excel, Power point), MySQL, SSIS, SSRS, Tableau, Selenium, Logi Analytics, Model-View-Controller (MVC), Visual Studio Team Services (VSTS), Azure Devops, Balsamiq, HP Quality Center, GitHub, Melissa Data, Ms SQL Server Database, Oracle.

Business Systems Analyst

Angle One Ltd - Bangalore, KARNATAKA, IN
May 2017 to January 2018

Development of an Online Portfolio Management System

This project aims to develop an Online Portfolio Management System that enables individuals and institutional investors to manage their investment portfolios digitally. The system provides features such as account aggregation, portfolio tracking, asset allocation, investment research, goal-based planning, performance reporting, automation, and alerts. By offering convenient access, efficiency, transparency, risk management tools, and collaboration options, the project aims to empower users with a centralized platform to effectively manage their investments, make informed decisions, and track progress towards their financial goals.

Roles and Responsibilities:

- Ensured that the data stored follows all the regulations laid down by governing bodies like SEC, FINRA, using Salesforce.

- Performed Gap Analysis, Cost-Benefit Analysis, Feasibility Study to understand AS-IS process and collaborated with the team to design TO-BE process based on the requirements which were gathered using Brainstorming sessions and Focus Groups.
- Created and maintained the Project Charter, Complete System, Business Requirement Document (BRD), System Requirement Specification (SRS), Product Backlogs, Sprint Backlogs, Burnup and Burndown chart and other documentation.
- Worked closely with the development team to create mock-ups, wireframes, prototypes, and Use Case diagrams using Lucid Chart that envisioned system architecture and assisted data architects in building the data warehouse and schema designing.
- Demonstrated expertise in testing REST APIs, performing CRUD operations and analyzing request/response mechanisms.
- Leveraged advanced SOA techniques to map URLs and supported development team with Postman and Swagger documentation.
- Generated SQL queries adeptly using joins, unions, and transformation rules to fetch data from the SQL Server database systems.
- Participated and worked with the QA team in writing test cases and test scripts for sanity testing, smoke testing, and integration testing to ensure all the features are tested exhaustively. Maintained an RTM using HP ALM to track all the test cases and issues.
- Involved actively in tracking the status of the sprints in JIRA and creating the Project Closure document using Confluence.
- Used Tableau to create dashboards where business insights can be visually represented and Salesforce to create summary reports.

Environment: Waterfall-Scrum Hybrid, JIRA, Confluence, Lucid Chart, Postman, Swagger, PL/SQL Developer, HP ALM, Salesforce, MS Outlook, MS Excel, Tableau.

Associate Business Analyst

YES Bank - Mumbai, MAHARASHTRA, IN
October 2015 to March 2017

Migration of traditional database systems to (EDW)Enterprise Data Warehouse

The objective of the project was Migration of traditional database systems to (EDW)Enterprise Data Warehouse system and integration of state data center sources. The implemented system primarily focused on providing budget allocation and expenditure tracking system for the administrative authorities with quarterly financial reporting and addressing various Fiscal information needs.

Roles and Responsibilities:

- As an Associate Business Analyst, assisted Business Analyst in eliciting requirements using Survey, Questionnaire, Interview sessions and analyzed the feasibility of requirements and conducted GAP Analysis to derive requirements for ECS processing.
- Assisted Project Manager adeptly in creating detailed Work Breakdown Structure, Project Plan Document and Project charter.
- Conducted a comprehensive extensive GAP analysis by identifying AS-IS and TO-BE Process Models and Process Flows.
- Elicited requirements involving vast set of interactions with various stakeholders through Focus Group Sessions, JAD Sessions, Structured/Unstructured/Semi - Structured Interviews, Req. Workshop, Process Analysis and Business Rules Analysis.
- Analyzed Feasibility of business requirements and defined Scope, identified Dependencies and Mapped accordingly to the Requirements by interacting with Subject Matter Experts, Product Owner, Project Manager and Technical Lead.

- Created an all-encompassing Macro Document incorporating components of Business Requirement Document and System Requirement Specification incorporating Business Requirements, Functional Requirements, Non-functional Requirements, Data Requirements & GUI requirements which would in turn serve as the central cornerstone of the project.
 - Created detailed Use Case Diagrams and Use Case Specifications and seamlessly integrated them into the Macro Document.
 - Performed extensive low fidelity & high-fidelity prototyping using Mock-Up Screens & Wireframes using Balsamiq.
 - Created SQL Queries for Portfolio Drill Downs to pull necessary data from Data Sources using MS SQL Server.
 - Acceptance Criteria for User Stories to perform User Acceptance Testing. Designed Test Cases, Test Plans using HP Quality Center Tool and Test Scenarios to perform Functional Testing, Smoke Testing and Regression Testing.
 - Used JIRA for Allotting Tasks, User Story Writing, Backlog Management, Issue Tracking, User Story Management, Holistic Dash - Boards and Forward and Backward requirement traceability.
 - Created Environment for Self-organization, Training Curriculum and wrote Training Scripts for End Users.
 - Analyzed using Spotfire Professional provided recommendations to the product owner over the use of BI Tools.
 - Created Spotfire Visualization Reports, and Interactive dashboards using Spotfire Professional Tool.
- Environment: Waterfall-Scrum, Balsamiq, MS Office (MS Word, MS Excel, MS PowerPoint), MS SQL Server, HP Quality Center, JIRA, Spotfire Visualization Reports, Spotfire Professional.

Business Analyst

IDFC First Bank - Hyderabad, TELANGANA, IN

May 2015 to October 2015

Anti-Money Laundering module and transaction monitoring system

The project was to enhance the existing Anti-Money Laundering module and transaction monitoring system to track the fraud transactions. We analyzed our legacy silos systems and enhanced the already existing integrated AML framework. The existing legacy silos systems incorporated modules of Know Your Customer (KYC), suspicious activity monitoring and transaction reporting. The aim of the project was to enhance the Anti - Money Laundering framework along with the already existing integrated modules.

Roles and Responsibilities:

- Facilitated productive JAD sessions, insightful Interview sessions, and Focus groups to effectively elicit requirements with stakeholders to thoroughly understanding the requirements.
- Created Business Requirements Document (BRD), Functional Requirement Document (FRD) and System Requirement Specification (SRS) to serve as foundational documents for the project, ensuring a clear and detailed implementation.
- Created Use case Diagrams, use case Specifications, Activity and Sequence Diagrams using MS Visio.
- Handled Requirement Churn by coordination with Product Owner and Development Team considering Scope Creep.
- Extensively involved in the User Acceptance Testing (UAT) to meticulously ensure the requirements and functionality of the system was in accordance with the users and their valuable feedback was incorporated using Cucumber.
- Executed detailed system test plans, test cases and test data on MS Excel to perform comprehensive system testing, smoke testing, regression testing. Effectively identified and managed those defects using JIRA for streamlined defect tracking.

- Reviewed defect reporting and resolution in HP Quality Centre to track the project progress against schedule.

Environment: Waterfall, MS Visio, Wiki Docs, MS Office Suite, MS Excel, Prezi Business for Presentation, SQL, Lucid Chart, HP QC, Cucumber.
