

PROFESSIONAL SUMMARY:

- A Professional IT Extensive experience as a Business Analyst with professional experience across various projects using SDLC methodologies such as Waterfall and Agile Scrum.
- Strong finance & banking domain knowledge including capital markets, account operations, banking processes, and financial statements.
- Proven ability in Business Analysis involving research, elicitation, gathering & defining business requirements/user requirements while managing the risks to improve business processes and translating the requirements into IT solutions.
- Experience in Business Process Modeling, Requirements Gathering, **As-Is, To-Be Analysis, Fit-Gap Analysis**, feasibility studies.
- Proficient in Unified Modeling Language, Use Case Diagrams, Activity Diagrams using MS Visio.
- Experienced in the Financial Industry with exposure to Retail Banking, Investment Banking, and Capital Markets (Equity, Fix Income, Swap, Fund, Mortgage, MBS, Forward, Future, Option, and other Securities).
- Knowledge and exposure to working with various regulations and compliance such as FINRA, FINCEN, PATRIOTIC ACT, BSA, AML, and KYC. Designed and implemented solutions pertaining to regulations.
- SDLC: In-depth and strong working knowledge of the Software Development Life Cycle SDLC phases such as planning, analysis/design, development, and testing
- Strong Communication, **Problem Solving, Organizational, Interpersonal, and Presentation Skills**
- Quality Assurance: Experience in conducting Joint Application Development (JAD) sessions with end users, expert team, QA team, and stakeholders for project-related meetings experience.
- Drafting business requirements and functional requirements in the form of BRDs, FRDs, SRSSs, etc. With great technical detail to support the actual implementation of the project. Hands-on experience with MS Visio and Use Case diagrams for creating data flow/process flow diagrams such as flowcharts, activity charts, and sequence diagrams as per UML.
- Extensively worked with various simple and complex SQL queries for data mining, data extraction, data verifications, and validation
- Worked extensively with Microsoft Excel (Macros, VLOOKUP's, and Pivot Tables), also in creating financial and application reports.
- Proficiency in designing and reviewing, Expertise in implementing Test Plans, Test cases, Functional testing, Regression Testing, Integration Testing, UAT, as well as maintaining Requirement Traceability Matrices.
- Actively involved in production support and conducting end-user training sessions.
- Experience in problem-solving, identifying and documenting root causes and corrective actions to meet short- and long-term business and system requirements.
- Team player with excellent interpersonal and communication skills. Technically competent and goal-oriented with problem-solving skills. Excellent team management and leadership skills. Additionally, great presentation skills regarding communication with both business and technical teams.
- Extensive experience in working in close collaboration with the customers during and after the release for production support, user training and issue resolution.

EDUCATION

University of Massachusetts at Boston, Boston, MA

Bachelor of Science, Information Technology, Information Architect

Information Technology major in joint program with the College of Management and College of Science and Mathematics.

Technical Skills:

Business Modeling Tools	Rational Rose, Rational Enterprise Suite, MS Visio
Requirement Management Tools	Rational Requisite Pro
Change Management Tools	Rational Clear Case, Rational Clear Quest
Project Management Tools	MS Project

Analysis/ Modeling tools	UML, JAD, RUP, Waterfall, Agile
Testing Tools	Roadrunner, Test Director, Mercury Quality center
Operating Systems	MS Windows NT/98/95/2000, Unix
Database	MS SQL Server 2000(execution of queries), MS Access, Oracle
Language	SQL, UML, XML
Utility	MS Office Suite(Word, Project, Excel, Visio, PowerPoint), Adobe Acrobat Suite, Lotus Notes

**Allianz Life
Minneapolis MN
Sr.Business Analyst**

JULY 2023 to Till Date

Allianz Life provides investment advisors, non-profit organizations, life insurance, retirement plans, securities brokerage, and related financial services. The assigned project was to work with a team to create a Web based investment management platform that integrates resources and aggregates data on market-to-market basis, allowing front office, middle office, and back office to conduct investment actions quickly and efficiently.

Responsibilities:

- Involved in gathering and synthesizing business requirements and translated them into functional and non-functional requirements to be used as input to the functional design specifications.
- Interacted extensively with SME's including heads in areas of equities, fixed income, derivatives, options, futures and risk managers, asset managers to understand corporate actions, extracting requirements from discussions, and refining and documenting them into Business requirements.
- Conducted JAD sessions with stakeholders, Subject Matter Experts (SME's), and end users to synchronize and update the requirements requested by the business users.
- Ensured that relevant UML diagrams and tools were used in all requirement documents and prepared Use Case Models, Flow Diagrams, Sequential Diagrams in MS Visio.
- Interacted with Access Management, system analysts and technical developers for successful completion of set project goals.
- Defined and manage metadata standards to catalog and document data assets, improving their discoverability and usability.
- Develop comprehensive documentation, including business process flows, system diagrams, and user stories.
- Utilized FactSet's data management capabilities to collect, organize, and analyze financial data from various sources.
- Implemented a third party OMS application (Blackrock's Aladdin).
- Collaborate with various teams to identify sources of relevant data and ensure its collection, storage, and organization.
- Define data mapping requirements, specifying how data from different sources will be transformed and loaded into the data warehouse.
- Documented technical specifications, data mappings, integration workflows, and protocols required for end-to-end connectivity.
- Collaborated with stakeholders, including sales, legal, and technical teams, to gather detailed requirements for merchant onboarding processes
- Optimize SQL queries for efficiency by analyzing query execution plans and identifying bottlenecks.
- Created systems models, schematics, business process maps, specifications, diagrams, and charts to provide documented direction to application system programmers and other stakeholders.
- Conducted walkthroughs with the end users and stakeholders to gather the modification requests from the user to upgrade or change the business specifications for the product.
- Involved in Technical writing of documents for Function and User Requirements Documents, Test Plan, Test Cases, and Test Scripts.
- Collaborated with ETL developers to ensure data transformations align with business rules and requirements.

- Documented ETL workflows, mapping documents, and transformation rules for reference and maintenance.
- Responsible for assisting the Quality Assurance team to create the test plan, testing scenarios and test cases for UAT testing.
- Performed Functional, Integration, System, User testing, functional, regression, verification, acceptance, and usability tests.
- Presented UI/UX designs and workflows to stakeholders, gathering input and ensuring alignment with business requirements.
- Used Agile Methodology extensively through all phases of the project.

Environment and Tools: SDLC Methodology, MS Office Suites, MS Outlook, MS Project, MS Visio, Microsoft SQL.

TD Bank
Roseville CA
Sr.Business Analyst

Dec 2021 to JULY 2023

Portfolio Management – Investment platform in which Financial Advisors assist clients in the development and execution of their investment goals, including investment management and objectives. Discretionary block-trading system developed to allow trades across multiple asset classes. Worked with the Portfolio Managers on Asset allocation, Cash Management, and reports.

Responsibilities:

- Worked closely with Product Owner and Stakeholders in an Agile SCRUM environment to improve, prioritize and support the development, testing and release of functionality;
- Collaborated with business stakeholders to understand their requirements and effectively communicate insights derived from Power BI reports.
- Used expense management module for reporting cash expense and also using features like approval workflows, cash reimbursement.
- Analyzing financial data related to assets and liabilities, identifying trends, and producing reports that provide insights to support decision-making.
- Involved in gathering and synthesizing business requirements and translated them into functional and non-functional requirements to be used as input to the functional design specifications.
- Gathered and analyzed business requirements through interviews, surveys and document analysis.
- Conducted JAD sessions to facilitate requirements gathering in coordination with multiple teams.
- Conducted Business Gap Analysis with respect to proposed enhancements and new requirements.
- Conducted feasibility study through mapping of AS-IS Business processes versus TO-BE business processes.
- Defined data mapping requirements for merchant information, ensuring seamless integration with internal systems and external payment networks.
- Worked with technical teams to design streamlined and efficient merchant onboarding processes.
- Documented ETL workflows, mapping documents, and transformation rules for reference and maintenance.
- Collaborated with business teams to implement data-driven solutions that address identified issues or opportunities.
- Wrote SQL queries to retrieve, filter, and manipulate data from databases based on business requirements.
- Conducted comprehensive data profiling to analyze data quality, identifying duplicate records, missing values, outliers, and inconsistencies.
- Created detailed documentation such as business requirements, functional specifications, user stories, and process documentation to ensure clear communication among stakeholders and development teams.
- Coordinated user testing sessions to validate UI/UX designs, gather user feedback, and identify areas for improvement.
- Conducted user acceptance testing (UAT) to ensure that the Salesforce solution meets business requirements.
- Evaluated AWS services and solutions that align with business objectives and requirements.
- Acted as a bridge between business stakeholders and technical teams, ensuring alignment and understanding of AWS capabilities.

- Conducted comprehensive analysis of clearing and collateral management processes, identifying areas for improvement and optimization.
- Analyzed market trends and regulatory changes to ensure compliance and adaptability of clearing and collateral management practices.
- Documented data processes, schemas, and workflows for internal use and communicating effectively with stakeholders, IT teams, and management about data-related strategies and solutions.
- Created and managed project documentation, including status reports, meeting minutes, and requirement documents.
- Evaluated how identified trends might impact the business strategy, operations, or decision-making.
- Interacted with Front Office, Middle Office and Back Office teams to identify and document business needs.
- Interacted with the asset management compliance officer and trader.
- Developed data models within Power BI by establishing relationships between different datasets, creating calculated columns or measures as needed.
- Interacted with fixed income traders and portfolio managers to gather derivative trading crystal reporting and Main-Frame requirements for enhancements.
- Wrote test cases, test scripts and test plans to accomplish the QA process
- Prepared testing data for the User Acceptance Testing as well as guided the business testers during UAT.
- Integrated Postman with other development tools and platforms to streamline workflows and enhance productivity.
- Used Agile Methodology extensively through all phases of the project

Environment: SIT, BAT, HTML, XML, Windows, HP ALM 11.5, AGILE Methodology and SharePoint.

THOMPSON & COMPANY
Brooklyn, NY
Sr.Business Analyst

Jan 2021- Nov 2021

This project was based on customizing capital markets web portal for Financial Advisors in a Wealth Management Platform including investment management that integrates resources and aggregates data on market-to-market basis, allowing Financial Advisors to conduct investment actions quickly and efficiently.

Responsibilities:

- Worked as a coordinator between business users and system developers to collect business requirements and support in system design/development/test/implementation.
- Responsible for use case analysis, BRD/FRS documentation, dynamic testing, user manual preparation, and client training.
- Assisted in identifying project risks related to requirements, scope, or stakeholders.
- Communicated with business sponsors to elicit business/functional requirements and generated use cases.
- Gathered and preprocess datasets from various sources to ensure they are clean, organized, and suitable for analysis within Power BI.
- Collaborated with stakeholders to understand business needs, documenting requirements, and translating them into system functionalities within Dynamics 365.
- Designed data models within Power BI, performing data cleaning, transformation, and integration from various sources to create a unified dataset for visualization.
- Worked with market data of various asset classes like equities, options etc.
- Worked closely with cross-functional teams, including operations, risk management, and IT, to develop and implement effective clearing and collateral management strategies.
- Supported end-users by providing training, conducting workshops, and addressing queries related to clearing and collateral management processes.
- Assessing and mitigating risks related to interest rate fluctuations, liquidity, credit, and market changes that impact assets and liabilities.
- Monitored API performance metrics using Postman monitors or other tools, identifying bottlenecks and areas for optimization.
- Ensured that merchant onboarding processes adhere to regulatory requirements and industry standards.
- Created visualizations, charts, and graphs to present data trends in an understandable format for stakeholders.

- Developed interactive prototypes or clickable mockups to demonstrate UI/UX design functionalities and gather feedback.
- Worked extensively with Bloomberg in mapping the market data to the data warehouse, and various data fields from the data warehouse to individual systems.
- Conducted brainstorming sessions to extrapolate the requirements that are not stated.
- Work as a liaison between the business team and development team by preparing detailed functional requirement documents with UML diagrams and Wireframes.
- Used UML methodology to capture, analyze, and translate business requirements.
- Developed business Use Case scenarios, conducted use case analysis.
- Documented BRD/FRS and explained the functional and nonfunctional requirements to developers.
- Assisted in requirement verification and validation during various phases of the Software Development Life Cycle (SDLC).
- Worked closely with cross-functional teams, including business stakeholders, data engineers, and IT professionals, to ensure alignment between business objectives and data analysis outcomes.
- Contributed to the development and implementation of risk mitigation strategies and contingency plans for clearing and collateral management activities.
- Worked with the front office/ Middle office / Back office teams to define data interface specifications and integrate data in risk management systems.
- Worked with Equity, Fixed Income, OTC Derivatives, Government Bonds, Exchange Traded
- implemented a third-party OMS application (Charles River) for an Equity trade desk is required.
- Collaborated with technical teams and stakeholders to design solutions within CGI Advantage ERP. Create functional specifications, workflow diagrams, and other documentation necessary for implementation.
- Collaborated with stakeholders to define project scope, objectives, and requirements.
- Participated in the UAT testing and performed manual testing.
- Performed Functional, Integration, System, User testing, functional, regression, verification, acceptance, and usability tests.
- Provided Capital Markets Operations subject matter expertise in Fixed Income and Equities.
- Created the user manual and provided onsite training to the end-users.
- Used Agile Methodology extensively through all phases of the project.
- Conducted backend testing using SQL queries to gather and analyze the product data.

Tools & Technologies: SQL Server, Jira, HP Application Lifecycle Management (ALM), MS Access, MS Excel, MS Visio and Murex.

Fulton Financial Corporation
Lancaster, P.A.
Business Analyst/Data Analyst

June 2019 – Dec 2020

The firm provides clients with capital markets and financial advisory services, institutional brokerage, securities research, and asset management. The project was to enhance a global trading platform which supports buying and selling of various asset classes including Equities, Fixed Income, options, mutual funds, and an ETF. This platform offers users quick trading capabilities, view account balance and positions, pricing history, current news, real time streaming quotes, portfolio, premium research, charting tools, and news feeds.

Responsibilities:

- Interacted with stakeholders to capture the business requirements to understand their needs and goals for the trading platform.
- Performed in-depth GAP analysis to understand the As-Is and To-Be business processes and functional requirements.
- Worked with risk management teams to assess the likelihood and impact of identified risks on business objectives.
- Develop and generate regular risk reports for key stakeholders, including management and relevant departments.
- Created comprehensive documentation for merchant onboarding procedures, including user guides, process documentation, and compliance checklists.
- Assisted with the development of metric measurement and reporting to identify Change Management trends along with recommending plans to remedy trending issues.
- Interacted with different users to understand the process and workflow of the system.
- Collaborating with cross-functional teams to improve the overall functionality of the tool.

- Participated in the design and development of the trading system.
- Collaborating with compliance, legal, and risk teams to ensure compliance with regulatory requirements.
- Maintained detailed documentation of ACH processes, PEP+ data management procedures, and compliance-related activities.
- Worked with market data and reference data using Bloomberg, Barclay's Analytics etc.
- Worked with various upstream and downstream interface teams to keep them in loop for various interfaces.
- Designed intuitive and user-friendly interfaces within Appian applications to enhance user adoption and experience.
- Coordinated Global Merchant Services' Anti-Money Laundering / KYC policy, procedures and standards across global business units.
- Developed test plans and scenarios to validate the accuracy and functionality of ACH processing systems and PEP+ data management tools.
- Integration with the AML Interface (BANCS) for Shadow and Pass Accounts.
- Updated relevant laws, regulations, and industry standards related to KYC and AML. Understand the obligations imposed on the organization and identify any changes or updates that may affect processes.
- Assisted in creating Test plans and Test cases for web services created by the QA team and performed functional testing.
- Utilized in-depth understanding of enterprise data warehouse, data model, and tables in the insurance context to contribute effectively to projects and initiatives.
- Continuously monitored and evaluated the effectiveness of KYC and AML processes and controls. Identify areas for improvement and suggest enhancements to mitigate risks and maintain compliance with evolving regulations.
- Facilitated communication between business stakeholders and technical teams, ensuring that business needs are met through SailPoint's functionalities.
- Evaluated existing business processes and systems to identify areas where KYC and AML compliance measures can be integrated effectively. Identify potential risks and gaps in current processes and propose improvements or modifications.
- Assisting with the creation of user training materials and providing ongoing support to users.
- Traced business requirements, design specifications, and test cases using Requirement Traceability Matrix

Tools and Technologies: Agile, JIRA, Murex, Confluence, MS Visio, HP ALM, MS Excel, MS PowerPoint, MS Outlook, SharePoint.

**Freedom Mortgage
Mount Laurel, NJ
Business Systems Analysts**

June 2018- May 2019

The objective of this project was to implement a Loan Management System, which would enable borrowers to apply for a mortgage, check the status of their application, insurance reporting, mortgage calculator and provide other related mortgage tools. System allows customers to get up to date information on the details of their accounts i.e., breakdown of monthly payment, amount due, and an amortization schedule, history of loan payments or escrow account disbursements/deposits, and additional features related to their account.

Responsibilities:

- Involved in a business requirement process and document the approach, project design based on the scope of the project and SDLC methodology.
- Coordinated and prioritized the outstanding risks and the enhancement requests based on business requirements.
- Collaborated with finance and treasury teams to develop ALM strategies that align with the organization's goals and risk appetite.
- Coordinated with compliance officers, legal teams, and other relevant stakeholders to validate suspicions, gather additional information, and seek guidance on reporting requirements.
- Worked with various upstream and downstream interface teams to keep them in loop for various interfaces.
- Gathered requirements for new AML projects such as onboarding new source systems and adding data to existing source systems.

- Involved in the project planning includes documenting the deliverables, deadlines, tracing and managing requirements during the project lifecycle.
- Conducted JAD sessions with project stakeholders to identify problems and provide the best alternative to resolve them.
- Evaluated the potential impacts of the proposed change on business processes, systems, data, organizational structure, and stakeholder
- Proactively identified opportunities for process improvements and enhancements within the insurance data management framework.
- Provided support and guidance to leveraging the power of data within the insurance domain, enabling informed decision-making and strategic planning.
- Utilized in-depth understanding of enterprise data warehouse, data model, and tables in the insurance context to contribute effectively to projects and initiatives.
- Provided Capital Markets Operations subject matter expertise in Fixed Income and Equities products.
- Document the targeted questionnaires for SME to gather requirements.
- Implemented UML methodologies to design Use Case Diagrams, Data Flow Diagrams, Activity Diagrams, and Sequence Diagrams.
- Created Use-Cases and Business Use-Case Model after accessing the status, scope of the project and understanding the business process.
- Collaborating with cross-functional teams to improve the overall functionality of the tool.
- Analyzed how the proposed change will impact data flows, data integrity, and data structures.
- Leveraged risk management tools and technologies to automate the collection and analysis of risk-related data.
- Performed SQL queries for back-end testing and data validation.
- Conducted walkthroughs with the development team and QA team and other relevant stakeholders to review testing strategies and test plans ensuring that the test cases reflect the business needs.

Environment and Tools: SDLC Methodology, MS Office Suites, MS Outlook, MS Project, MS Visio, Microsoft SQL.

Heritage Bank of Commerce
San Jose, CA
Business Analyst

May 2017 - May 2018

Project:

The scope of the project was to streamline the CALMS Loan Origination System (LOS) for Retail Auto and Consumer Finance division and to handle Proposals, credit decisioning, document verifications, automate underwriting processes, credit scoring, integration with Multiple credit bureau and other third-party's and funding loans, onboarding contracts onto the loan management systems etc.

Responsibilities:

- Worked in the project following Waterfall SDLC methodology.
- Conducted user interviews and JAD sessions to gathered requirements, analyzed, and documented requirements based on the analysis of the workflow model.
- Monitoring the performance of assets and liabilities against defined benchmarks and targets.
- Gathered and refined business requirements for a new auto and consumer finance loan origination implementation project.
- Analyzed existing KYC and BGC processes to identify areas for improvement, automation, and optimization.
- Collaborating with cross-functional teams to improve the overall functionality of the tool.
- Analyzed Requirements and segregated them into high level and low-level Use Cases, conducted workflow, process diagram and gap analyses etc.
- Created various Activity Diagrams, Sequence, Class, Swimlane and State Chart Diagrams using Rational Rose according to UML methodology.
- Facilitated and managed meeting sessions from business areas including Confidential Origination, Loan Processing.
- Created comprehensive documentation, including user guides, process documentation, and configuration details related to Global Pay Plus.
- Worked closely with technical teams and stakeholders to design solutions within Global Pay Plus.
- Worked with technical teams to implement enhancements or updates to ACH processing systems.

- Identified opportunities to streamline ACH processing workflows and improve operational efficiency in managing PEP+ data.
- Integrated Appian applications with various data sources and systems, ensuring seamless data flow and consistency.
- Assisted in the testing and validation of new or modified systems, processes, and controls related to KYC and AML. Helped define test scenarios, perform testing, and validate that the implemented solution meets the required regulatory standards.
- Provided Capital Markets Operations subject matter expertise in Fixed Income and Equities products.
- Developed business requirements document (BRD), Use Cases, User requirements and functional requirements.
- Collaborate with stakeholders, such as compliance officers, legal teams, and technology specialists, to gather requirements for KYC and AML compliance. Document the business rules, data requirements, and process flows necessary to meet regulatory obligations.
- Worked with various upstream and downstream interface teams to keep them in loop for various interfaces.
- Conduct extensive KYC of focus to determine if there is any relevant negative news or derogatory information on the client using systems.
- Provided implementation of KYC for multiple countries to adhere Anti Money Laundering compliance
- Generated workflow process, flow charts and data flow diagrams for the project and reviewed process for mortgages and documents needed to close loans.
- Conducted data definition and data mapping, for transferring data from the legacy to new database.
- Analysis of the data retrieving through MS Excel Sheets. Adept at using Pivot tables, VLOOKUP and dashboards.
- Coordinated Data migration from MS Excel to SQL Server Reporting Service Using DTS and SQL loader utilities.
- Developed and executed test cases to validate Swift message integration, ensuring accuracy, completeness, and adherence to business requirements.
- Identified opportunities for technological advancements to streamline processes and improve efficiency in managing assets and liabilities.
- Developed test cases and scenarios to validate the effectiveness of the updated KYC processes. Conduct testing to ensure that the new procedures meet regulatory requirements and align with the business needs.
- Reviewed and analyzed customer transactions, behaviors, and activities. Identify anomalies, unusual patterns, or transactions that deviate from typical behavior or regulatory thresholds.
- Conducted extensive analysis of KYC data to understand the attributes, schemas and data structures.
- Conducted backend testing using SQL queries to gather and analyze the product data.
- Conducted Previews and User Acceptance Test (UAT) sessions with the marketing team.
- Performed Root Cause Analysis and Re-Engineered business process and implemented performance measures, project presentations to the business users.
- Worked with technical teams to map business requirements to Swift message formats (like MT messages), ensuring accurate translation and understanding between systems.

Wells Fargo Bank
San Leandro, CA
JR Business Analyst

Jan 2016 - Mar 2017

Project:

The scope of the project was to enhance the features and applications of Online Banking Services for the bank's Commercial Card Products. This includes enhancing certain features to provide the Bank's customers with a better access to expense reports and payment alerts.

Responsibilities:

- Requirements Elicitation from Business Managers, Supervisors, stakeholders, and the Subject Matter Experts through meetings to understand needs of the system.
- Modified existing programs on mainframe to add a new payment code. It Included adding a new column in the claims payment table.
- Acted as a bridge between compliance, business, and technical teams, facilitating effective communication and alignment of objectives. Ensure that all stakeholders understand and follow the new KYC procedures.
- Worked closely with technical teams and stakeholders to design solutions within Global Pay Plus.
- Analyzed existing global payroll and payment processes to identify inefficiencies, compliance issues, or areas for improvement.

- Collaborated with compliance officers, legal experts, and stakeholders to gather and understand KYC and BGC requirements.
- Collaborated with stakeholders to gather and document detailed business requirements for ACH transaction processing and PEP+ data management.
- Moving all converted files, jobs, procs, parm libraries from Omaha mainframe to Argentina Mainframe.
- Completed a Business and Technical Requirement Document (BTRD)
- Perform the validation of implemented business scenarios.
- Developed current 'AS-IS' and 'TO-BE' business processes and use case documents in compliance with Confidential policies and procedures using MS Visio.
- Involved with project management team in developing project plan.
- Collaborated with different departments to enhance AML-related processes. This included refining onboarding procedures, improving transaction monitoring systems, and implementing new technology for better compliance.
- Collaborated with stakeholders to understand their global payroll and payment processing needs.
- Analyzed existing KYC and BGC processes to identify areas for improvement, automation, and optimization.
- Involved in Black box testing using decision testing and use case testing.
- Created Use case diagrams, Activity, Sequence and Collaboration diagrams using UML.
- Worked directly with quality resources to ensure testing activities are in line with the defined business requirements.
- Monitored and assessed risks associated with Swift messages and payment systems, implementing measures to mitigate potential threats or vulnerabilities.
- Coordinated with QA team and performed user acceptance testing.
- Interacted with Subject Matter Experts (SME) and end users and established a business analysis around AGILE methodology.
- Identified opportunities for process enhancements or optimization related to Swift messages and payment workflows. Propose and implement improvements to streamline operations.
- Provided Capital Markets Operations subject matter expertise in Fixed Income and Equities products.
- Organized user acceptance test (UAT) results between users and development team and provided recommendations for Application change requests (ACR).
- Performed the Gap analysis on the earlier systems, generated a detailed Requirements document describing new system architecture through Use Cases and Activity diagrams.
