

PROFESSIONAL SUMMARY:

- Accomplished Data Analyst and a talented IT professional with 12 years of multi-domain experiences in Business Analytics, Data Analytics, Data collection, Data cleaning, Data cleansing, Data mining, Databases, Exploratory Data Analysis, EDA, Data wrangling, Data analysis, Databases management, Data Visualization, Database normalization, Data Integration, Data Integrity, Descriptive Analytics, Data Science, AI, ML, NLP, Data modeling, Business Intelligence, Predictive Analytics, Prescriptive Analytics, and Cognitive Analytics
- Expertise in Project management, Program management, Product management, Inventory management, Technical Program management, Supply chain & delivery management, Risk & Portfolio management, Stakeholders & team management, Budget management, Cost & Pricing management, Time management
- Experienced in Artificial Intelligence, Machine Learning, ML algorithms, AI models, Statistics, Text mining, Sentiment analysis, Regression Analysis, Linear & Logistic Regression analysis, Text Analytics, Prediction, Forecasting, Time Series Forecasting analysis, Predictive Modeling, SVM, Neural Networks, Decision Trees
- Possess excellent problem-solving & analytical skills with a strong technical background and an efficient project manager with great communication and interpersonal skills and a result-oriented team player
- Highly self-motivated, enthusiastic, and result-driven with ability to effectively communicate with all levels of organization including the management team, senior executives, shareholders, and other stakeholders
- Extensively worked on early-stage business projects, discovery efforts, and engagements initiated by Business Relationship Managers to provide appropriate architecture deliverables, such as stakeholder analysis, capability analysis, risk/value analysis, cost-benefit analysis, swot analysis, and technical analysis
- Managed & supervised a 25-member team and involved in Data flow analysis, Data modeling, Physical database design, forms design & development, data conversion, server performance analysis and learned Partner experience, stakeholder accountability, Weekly & monthly Status reports (SAP Crystal reports)
- Spearheaded the team and facilitated faster data sharing & data retrieval, which saved monthly 40 hours
- Proficient in gathering and analyzing Business Requirement documents and converting them into technical specification documents and documented both Functional and System Requirement Specifications (SRS)
- Experienced in developing, implementing and maintenance of Business Intelligence tools & applications
- Proficient in creating VBA scripts, Macros, & DAX queries in Excel that automated reports & reduced time
- Handled Data warehousing, ETL & reporting process by merging data from many SQL Servers - PostgreSQL, Azure SQL, MS SQL server, Teradata, Oracle, Sybase, Db2, MySQL using SSIS, SSRS with NetSuite Analytics
- Created reports using SQL Server 2016 Reporting Services (SSRS) & SQL server Data tools for Visual Studio
- Handled and executed complex SQL queries in both T-SQL coding & Python scripting in Visual Studio tool
- Presented project insights on PPT files to stakeholders, by creating reports & dashboards with GCP Looker, Qlik, QlikView, Qlik sense, GCP, Looker, Alteryx, Tableau Prep Builder, Tableau Prep, Tableau, & Power BI
- Created interactive visualizations & dynamic dashboards using Tableau, Power BI with R & Python from data source like Excel / CSV / Text file, SQL server, Azure SQL, Real time streaming data, SSAS, PostgreSQL
- Expertise in statistics, data modeling, simulation & advanced analytics using sets, parameter, graph, chart
- Utilized various ML techniques and advanced algorithms like KNN, Random forests, and Decision Trees
- Performed Regression Analysis by utilizing multiple Machine Learning algorithms and created Predictive data models and calculated the parsimonious model with 95% confidence interval and higher accuracy
- Utilized SQL server Data tools and prepared many reports using SSRS & formatted those reports for users

- Driven cross line of Business Intelligence team to produce decisive data analytical reporting in Google Analytics and simultaneously maintained many databases by creating & reusing PL/SQL Stored Procedure
- Learned Oracle cloud financials, Oracle ETL, Azure Data Explorer with Kusto Query Language (KQL) & used Master data management (MDM) to consolidate multi sources data to a single master view (master data)
- Handled market demand based on supply chain (supply & demand management) and optimized data in SQL, PL/SQL, T-SQL, ANSI SQL with Joins, CTEs, Subqueries, Views, Indexes, Stored Procedures, & Triggers
- Handled ETL process & ETL tools like Informatica, SSIS, Azure Data factory and ELT tools like Azure Synapse and data modeling & design tools like Erwin Data modeler, ER Studio and SAP Business Objects, Oracle BI
- Used advanced Excel functions like Index, Match, Offset, Transpose, Pivot Table, Pivot chart, Slicer, Solver, VLOOKUP, XLOOKUP, GetPivotData, Power Pivot, What-if-analysis and used Power Query for ETL process
- Learned Cloud Computing with Google cloud, Azure Services, Azure Data Factory (ADF), Azure Data Lake, Azure Cosmos DB, Azure Data bricks, Azure Synapse Analytics, Azure SQL & NetSuite Analytics Warehouse
- Utilized Azure Data bricks to process & transform the datasets and explored the data using ML models
- Learned Oracle Services Cloud (ERP & CRM) & used Azure Data Lake Storage (ADLS Gen2) for cloud-based repository, built on blob storage for structured & unstructured data with data governance & data quality
- Assisted the team with the technical design & data migration of the databases to cloud-based Azure SQL
- Handled OLTP & OLAP data model, Tabular & Multi-dimensional model and prepared reports by extracting data from Data cube, and visualized & optimized report in Power BI, Oracle NetSuite Analytics Warehouse
- Handled ERP system (supply chain) & ERP tools like Informatica, SAP ERP, SSIS, Microsoft Dynamics 365 for both its CRM & ERP suite along with its real time marketing through email and push notification messages
- Used Dynamics 365 to manage Finance, Supply chain, & project operations with financial account & ledger and to maintain company inventory management by creating report with Sentiment & Predictive analysis
- Possess knowledge on Data Engineering tools & techniques like Google cloud platform, Big Query, Kerika, Snowflake, Kafka, Hive, AWS, Hadoop, Spark, Spark SQL, SAS, Scala, Presto, HDFS, Kanban, Azure, PySpark
- Handled Big Data, Azure Cosmos DB, Azure SQL Synapse & learned NoSQL based Cassandra DB, MongoDB
- Exposed to creation of Data pipelines using Azure Data factory with Azure blob storage that led to create data pipelines by enabling Microsoft Fabric tenant account in the Microsoft Fabric enabled workspace
- Learned cloud-based CRM tools like Salesforce to manage customer data along with their sales operations
- Learned Data analysis tools like Amazon Quick Sight, Matlab and Data storage tools like Amazon Redshift
- Handled ERP processes & BI techniques with Data quality management, Data Security, Data Governance using Informatica, SAP BW, SAP ERP, SAP BI, SAP BO, SAP BOE, SAP HANA, SAP Lumira, & Oracle NetSuite
- Assisted team in both business and technical areas to create Enterprise data model & to deliver business process solution with corporate priorities and adhered to projects with both data security & data integrity
- Assisted and mentored Junior DAs in the project and took initiatives by making them participate in the business analysis efforts on many complex business projects with high degree of technical sophistications
- Exposed to all phases of software development life cycle SDLC including in-depth knowledge of Waterfall model, Spiral model, Agile scrum methodologies within organization and mostly supported Agile projects
- Proficient in Enterprise Reporting Life Cycle, ERP system, Data migrations, Problem management, Change management, Critical issues management, Escalation procedures, Data modeling & Data modeling tools
- Proficient in ML tools like Azure Machine Learning Studio to build & deploy high quality predictive models
- Handled Project management & BI tools like Visual Studio, MS Project, Visio, IBM Watson, Cognos, OBIEE, & JIRA to keep track of project modules & milestones and create necessary reports for client submissions
- Subject Matter Expert (SME) on Data & Business Analytics by handling project's end-to-end data flow and provided value added result by solving issues, saving time, increasing sales & creating profit to customers
- Administered projects with star schema and made sure timely completion of modules within SLA timings
- Ensured all end deliverables were handed over to users on time with no delay and no recurring defects

SKILLS, TECHNOLOGIES, AND TOOLS:

Analytics Skills	Data analysis, Data cleansing, Data visualization, Data mining, Data wrangling, Data Analytics, Descriptive Analytics, Business Intelligence, Business Analytics
Analytics Tools	Azure, Power BI (Desktop & web service), Tableau, Tableau Server, SSMS - SQL Server Management Studio, Advanced Excel (Pivot Table, Pivot chart, Slicer, Solver, Power Pivot, VBA Scripting, Macros, What-if analysis, Index, Match, VLOOKUP, XLOOKUP, GetPivotData), RapidMiner, Visual Studio, Qlik
AI Skills	Predictive Analytics, Prediction, Forecasting, Regression Analysis, Sentiment analysis, Statistics, Statistical Hypothesis testing, Machine Learning, ML algorithms, Time series forecasting, Text Analytics, Text mining.
AI Tools	R Studio, Python 3, Spyder, Anaconda, PyCharm, Jupyter notebook, VS code
Databases, ETL, Data Modeling and ML Tools	Microsoft SQL Server, SSMS, Azure SQL, Azure Cosmos DB, Azure ML Studio, NoSQL, SSAS, Data cube, OLAP, OLTP, MOLAP, SSIS, SSRS, ANSI SQL, Access, MySQL, Oracle, Oracle SQL Developer, Teradata, PostgreSQL, pgAdmin4, Big Data, ER Studio, Informatica, Erwin Data Modeler, Tableau Prep Builder
Programming Languages	SQL, T-SQL, PL/SQL, SCOPE, ISCOPE, DAX, R, Python 3, C, C++, HTML.
Packages, Machine Learning Techniques & ML Algorithms	R (plyr, dplyr, plotly, ggplot2, forecast, randomforest, xgboost, mlr), Python (numpy, scipy, pandas, plotly, matplotlib, seaborn, scikit-learn), KNN, K-means, Naïve Bayes, Random Forest, Decision trees, AdaBoost, SVM, NLP, Null & alternate hypothesis, Boosting, Neural networks, F-test, T-test

CERTIFICATIONS AND ACHIEVEMENTS:

- Certified Power **BI Developer**
- Certified **Tableau Developer**
- Certified **R Programmer**
- Certified **Python Programmer**
- Microsoft Certified **Azure Developer**
- Microsoft Certified **Professional Developer 4.0**
- Microsoft Certified **Web Developer**
- Microsoft Certified **Windows Developer**
- Red Hat Certified **Engineer 5.0**
- Milgard Endowed Scholar - Scholarship Grant for University of Washington's Business Graduate students
- Magna Cum Laude candidate
- INFORMS chapter member and Secretary of INFORMS chapter in University of Washington Tacoma
- Recipient of Accenture Celebrates Excellence (ACE) award & Orange Awards
- Branch Secretary of IEEE Student chapter, Amrita University, India
- President of Free and Open-Source Software (FOSS) Club in Amrita University, India

EDUCATION:

MS. in Business Analytics in University of Washington, WA	2017 - 2018
MBA. in Business Intelligence in Suffolk University, Boston, MA	2015 - 2017
BS. Information Technology in Amrita University, Coimbatore, India	2008 - 2012

PROFESSIONAL EXPERIENCE:

Data Analyst Consultant Microsoft, Redmond, WA	Dec. 2020 - Present
---	----------------------------

Description: Microsoft has its GDC Marketing Operations team, which markets their products globally. This project was to analyze the market share of MS Teams App and to provide insights to improve its global reach.

- Spearheaded a 15-member team and assisted Microsoft executives by providing insight on MS Teams app
- Engaged in early-stage Stakeholder analysis and Business requirements meeting and documented all the necessary requirements along with the project's expected deadlines and SLA timings for solving the issues
- Involved in Data analysis, Enterprise Data modeling, Data Architecture to be implemented & explored data warehousing for market stream data (Azure Stream Analytics) with Azure Synapse Analytics & Kusto (KQL)
- Imported data from multiple sources into Excel reports using Power Query and automated the existing reports into dynamic reports using VBA scripts, Macros, and Pivot tables that refreshes data automatically
- Improved performance on existing Azure SQL code and ensured the application meets industry standards
- Created SCOPE & ISCOPE scripts (SCOPE & ISCOPE – Microsoft legacy script language using SQL & C#), and queried real-time live usage data from COSMOS stream & converted output stream to chunks of CSV files
- Connected the files into Power BI and created data visualizations by analyzing the usage of MS Teams app
- Compared the usage of MS Teams app data over various regions against the usage of its competitors like Slack, Chime, Zoom in Tableau and identified an uneven usage of Teams app in Asia Pacific (APAC) region
- Created data models with their Entity relationship using Power Pivot with DAX queries & summarized the results in Power BI dashboards that resulted in finding the decrease in usage of Teams app was due to the time restriction in the Teams meeting sessions and the lack or unavailability of Teams free app globally
- Improved the data by creating sample test data & train data to test the modified data and created a Time Series forecasting analysis plot to forecast the sales growth rate in the upcoming quarter for Microsoft
- Created a Predictive data model in Power BI by performing Regression analysis with the updated data and forecasted an increase in the usage of the MS Teams app by 5% in the APAC region by the end of Q4 '21
- Compared the predicted model with other data models using Machine Learning techniques & multiple ML algorithms like KNN, K-means clustering, Decision tree, Random Forest, and improved the accuracy by 5%
- Implemented the final predicted model with higher accuracy in phase-by-phase manner in APAC region, which accelerated the sales in those regions and resulted in an increase of the quarterly sales by 0.96%
- Enhanced dynamic reports & Power BI dashboards by implementing Row level security restriction for users and summarized user count & utilization rate that saved monthly 10 hours and raised productivity by 20%
- Retrieved and validated the financial data with Azure SQL Synapse using T-SQL queries by connecting the data to Power BI, and created multiple data visualizations, paginated reports and dynamic dashboards
- Utilized calculated columns with DAX queries and used the What-if visual to analyze the count of the users in different regions and created the Key Influencers & Decomposition trees visual charts to find the scope of the usage of Teams app in various regions globally and the increase in user count & the conversion rate

- Configured the Power BI default gateways and set the dashboards for incremental refreshing on the real time data (auto refreshing) and published dashboards to the leadership team via email & saved 20 hours

Environment: Power BI, Excel, SQL Server, SQL Server Management Studio / SSMS, R Studio, R scripts in Power BI, SSAS, Data cube, Azure SQL, Tableau, TabPy, Python, SharePoint, OneDrive, OneNote.

Data Analyst Consultant Microsoft, Bellevue, WA	May. 2019 - Nov. 2020
--	------------------------------

Description: The project was to analyze Microsoft Sales data & provide insights to the Business Operations team.

- Singlehandedly explored Microsoft sales & revenue data and gave insights to senior leadership team
- Connected the sales data and performed the data modeling in SQL server with the necessary entity relationships & normalized the databases that ensured data integrity and eliminated data redundancy
- Administered database using complex SQL query with Joins, Subquery, Stored procedures, Trigger & View
- Connected sales data cube using SSAS & cleaned the data by removing duplicates with VBA script, Macros, Power Query & rearranged data by formatting date value, float value, percentage value, & replaced Null / empty / zero value with its average value and listed formatted data in Pivot table with drill down options
- Visualized the data in Power BI and created its global sales & revenue dashboards with Row level security
- Evaluated key metrics with quarter on quarter (QoQ), year over year (YoY) analysis in Tableau against the summarized region wise sales in Power BI using DAX queries & provided KPIs to senior management team
- Enhanced the existing Excel reports by using Power Pivot & created data models with DAX queries and automated the manual reports into dynamic reports & power BI dashboards and saved monthly 20 hours
- Explored past 10 years of sales history of the products across geographical region in Power BI & visualized COGS vs. the years and amount generated vs. the years by each region and created paginated reports along with implementing row level security restrictions for users that led to find the region with low sales
- Created the custom visual charts like Regional Maps chart, Waterfall chart, Combo chart, Radar chart, KPI card, R script visual & used DAX queries to calculate running total values and generated time series prediction model (ARIMA model) and predicted an increase in sales by 2% in the region with low sales
- Created ML algorithms to detect anomaly and outlier detection on abnormal events for the month-to-month sales of Microsoft Surface products to distributors and enhanced revenue data by resolving ambiguities and updated them periodically, which reduced the time complexity of the reports by 50%
- Implemented predicted data model in gradual manner in APAC region and quarterly sales raised by 0.43%
- Resolved 220/400+ critical tickets with '0' reopening defect that raised Ticket resolution rate by 30%

Environment: Power BI, Power BI web services, Tableau, Tableau Server, Excel, SQL Server, SSMS, R Studio, R scripts in Power BI, SSAS, Data cube, Azure SQL, SharePoint, OneDrive, OneNote, Microsoft One Insights.

Data Analyst Consultant Microsoft, Bellevue, WA	Nov. 2018 - Mar. 2019
--	------------------------------

Description: Microsoft has its CDS Finance team, which administers fiscal budget and the yearly revenue generated. This project was to analyze its Finance data and provide key results & reports for CDS Finance (MS Sales) team.

- Administered the finance data and provided high-level insights and Dynamic BI reports to the Microsoft Senior Business Executives to foresee and periodically monitor the Business raising metrics for every quarter
- Gathered their business requirements by working closely with business users, project leaders, and developers and analyzed their requirements by designing both the conceptual and logical data models
- Connected the finance data cube in Excel through SSAS and created multiple Pivot tables with Slicer, and Pivot chart and summarized reports with yearly budget allocation, revenue & the profit generated
- Designed & deployed multiple CDS Finance Excel reports periodically on Microsoft One Insights (Cloud platform) and prepared dashboards for these reports in Tableau and compared them with Power BI
- Developed & maintained Data dictionaries, Naming conventions, and various standard for document
- Extracted data with complex SQL queries and created several data visualizations & summarized the results in Power BI dashboards and compared them with Tableau for the better accuracy of the result
- Retrieved and validated the financial data with Azure SQL Synapse using T-SQL queries by connecting the data to Power BI, and created several data visualizations, paginated reports & dynamic dashboard
- Connected SQL server to finance cube & executed complex SQL queries with joins, subqueries and verified its results with the findings in financial reports and reduced the time complexity of reports
- Collected data from various data sources and performed ETL process using Power Query in Excel and automated financial reports using Power Pivot with DAX queries that resulted in designing reports with auto refresh of data & dynamic Power BI dashboards, which saved monthly 30 hours of reworking time
- Enhanced Strategic metric report with Pivot table & saved run time to fetch data from data cube by 50%
- Created predictive model using ML techniques & algorithms like KNN, Naïve Bayes, K-means clustering
- Worked with DBAs, BAs, Content Developer to review & validate developed models and incorporated data cube in Power BI through SSAS and created KPI metrics dashboard & published them via email list
- Created Power BI calculated columns with running total DAX queries & analyzed expected vs. actual outcome and found gaps between net traffic & conversion rate that explained decrease in conversion rate
- Resolved many critical tickets immediately as per SLA report time limit, that raised productivity by 40%

Environment: Power BI, Power BI web services, Tableau, Tableau Server, Excel, SQL Server, SSMS, R Studio, R scripts in Power BI, SSAS, Data cube, Azure SQL, SharePoint, OneDrive, OneNote, Microsoft One Insights

Business Analyst

Jul. 2018 - Oct. 2018

Multicare Health, Tacoma, WA

Description: MultiCare Health is one of the prominent Healthcare hospitals in Washington state. This project was about finding ways to establish Behavioral Health Hospital for MultiCare Health system in Puget Sound region, WA.

- Completed the Trainings on HIPAA compliance, Privacy & Information security, and EPIC tool training
- Implemented the new test cases in the EPIC tool and tested the EPIC tool for the new 2018 upgrade
- Coordinated with both Navos and Greater lakes team to collect the data for Behavioral Health hospital
- Assisted PeakCare team in implementing user requirement documents and created Use cases, UML diagrams, User stories and converted business requirements into technical specification documents
- Developed Excel VBA scripts which extracted the data to be integrated with the SQL server databases
- Worked simultaneously on different regions using Oracle PL/SQL and connected & optimized the

- hospital data using SQL queries with joins & subqueries, which resulted in an efficient relational data
- Built data as per normalization norms and ensured avoiding Data duplicates & providing Data security
- Performed Data cleaning & data mining process using Tableau Prep tool and exported the formatted data results into Tableau Desktop tool for Predictive Data analysis and visualized the graphs & charts
- Resolved discrepancies between executed DDL queries & physical data model and conveyed the results to the Data Architects with updated status of physical and Enterprise Data modeling activities
- Utilized Oracle Cloud financials & the ERP system modules and assisted the logistics team in better planning, billing, budgeting, forecasting and simplifying the IT cost associated with consolidated billing
- Optimized the data and saved their costs by reallocating their services to better serve the business
- Implemented Tableau pareto chart & waterfall chart and summarized them with KPI values in stories
- Summarized the key metrics for the projects in multiple Tableau dashboards and published them on Tableau online and provided the dashboards & other KPIs to senior management team in the hospital
- Worked with senior programmers and QA personnel in performing unit test and user acceptance tests
- Ensured the best performance and compatibility of MS Access database & other applications on various platforms and periodically provided other necessary strategic updates to the leadership team
- Automated tasks for Ad-Hoc reports, metric reports, and other key financial excel spreadsheets to reduce the workload, improve data quality, avoid data duplication and to enhance time redundancy
- Improved manual report by interactive Tableau dashboard and saved report timings by 8 hrs./month

Environment: Word, PowerPoint, Excel, Sql, Tableau, Tableau server, Project, Healthcare legacy tool – Epic

Data Analyst	Oct. 2017 - Jun. 2018
CHI Franciscan Health, Tacoma, WA	

Description: CHI Franciscan Health is one of the major hospitals in WA state. They have various hospitals & operation rooms in each hospital. This project was to optimize the utilization rate of their operation rooms.

- Spearheaded a team of 4 members and organized & assisted the team in managing the project deadlines
- Converted business requirements into technical specification documents and prioritized the deliverables
- Created a central database repository by executing complex SQL queries and pulled big volume of patient data (5m rows) from 3 SQL server databases that saved data collection & data cleansing time of 20 hours
- Enabled disaster recovery or failsafe backup option on server side that reduced server downtime by 70%
- Created reports using SQL Server 2016 Reporting Services (SSRS) & SQL server Data tools for Visual Studio
- Connected the SQL server data into Tableau Prep builder tool and performed data cleaning on the data & identified block of both utilized & un-utilized time in operation rooms during surgery, across all hospitals
- Exported data from Tableau prep builder into Tableau Desktop and visualized utilization rate of the rooms that led to identify under-utilization rate bottlenecks and rearranged patient data for easy calculations
- Performed data blending and created calculated fields with LOD expression like Exclude, Include & Fixed in charts like Pareto charts, Bullet chart, Waterfall charts, Symbol map charts and published story to server
- Used ER/Studio to create the Enterprise data model with source to target mapping, and naming standards
- Managed Oracle Services cloud and Oracle ETL by collecting the data & analyzing the consumer feedback
- Handled Oracle services cloud as a marketing tool and published emails and messages to their end users
- Utilized the past 5 years of historical data from the above revised data in Tableau and created a predictive data model, which resulted in an increase of prime-time utilization rate of the operation rooms by 41%
- Split the dataset into testing data set & training data set with a ratio of 70:30 and utilized decision tree to measure the accuracy of the selected key metrics on Python with the Scikit-learn package

- Used random forest as a contrasting model to decision tree, and the model accuracy improved by 5%
- Connected the SQL server work result into Python and used NumPy and Pandas to clean the datasets with the matplotlib package on Python for the Exploratory Data analysis (EDA) with Data wrangling
- Established a connection between SQL server & R Studio via ODBC connection and visualized patient data in R Studio tool by performing data analysis, statistical analysis, and generated reports & graphs
- Validated the daily inbound & outbound data activities, and updated appropriate data in the back end of the production servers and utilized the modified patient data history and created a predictive data model (time series forecasting model/ARIMA model) with 95% confidence interval and high accuracy
- Predicted an increase in patients' inflow by 32% by shifting minor surgeries to the least utilized hospitals
- Automated reports in Tableau by creating Pareto Charts, Waterfall chart and dynamic dashboards using parameters and downloaded the workbook into pdf files and summarized the prediction results along with their key metrics dashboards and published the dashboards to stakeholders through Tableau Server
- Reviewed key metrics and recommended hospital management to operate outpatient minor surgery in same day surgical center that would establish it as a center of excellence for outpatient minor surgery

Environment: Excel, SQL Server, SQL Server Management Studio / SSMS, Tableau, Tableau Server, R Studio, Python, SharePoint, OneDrive, OneNote.

Data Analyst	Oct. 2016 - Aug. 2017
Clyque, Boston, MA	

Description: Finding opportunities to establish Clyque, a social networking startup company, in Suffolk County, MA.

- Researched Social networking data and examined online networking groups like FB, Meetup, & Eventbrite
- Conducted a Sentiment analysis on these networking groups in Tableau and IBM Watson Social media analytics tool and identified an inefficiency issue in finding relevant people in those networking groups
- Desired to examine further about the inefficiencies, which led to the initial sample of few college students from MIT, Harvard University, Boston University, and Suffolk University students in the Boston region
- Conducted direct in-person meetings with those students and asked them about the inconveniences they faced for searching people in the social network and got their feedback & gathered their requirements
- Documented all their requirements & wanted to increase sample size, which led to create online surveys
- Collected Data from various online surveys like SurveyMonkey & Qualtrics into an On-premises SQL server
- Explored social networking expectation using these surveys & got feedback on issues they faced in networking groups, that led to a 30% dissatisfaction rate with current feature in those networking groups
- Discovered further about creating a social networking startup company and initiated the research by analyzing the SWOT analysis and PESTEL analysis for the social networking groups in Greater Boston area
- Brainstormed about the various options of creating a company initially for bringing in the students within Boston region and then expanding it further in the future to other people in the state of Massachusetts
- Established Clyque, a social networking Startup company in Boston, to meet, collaborate, and spend time with friends that enabled users to quickly search others for both entertainment & recruitment purpose
- Collected the data from the Clyque portal into an On-premises SQL server as the back-end databases
- Utilized SQL server Data tools and prepared many reports using SSRS & formatted those reports for users
- Performed in-depth analysis of data and prepared daily reports by using Excel, SQL, Tableau, & Power BI
- Connected SQL server to Tableau, prepared Key metrics and published KPI dashboards on Tableau server
- Optimized Clyque online portal effectively with both A/B testing and Multivariate testing approaches

- Validated data to check for the proper conversion of the data and verified Data cleansing to clean unnecessary data and data profiling for the accuracy, completeness, and proper consistency of the data
- Administered scheduled data refresh on the Tableau Server for weekly and monthly increments based on business changes, which got updated on the dashboard and increased throughput by 30% periodically
- Collected continuous feedback from the students and stored all the corresponding data in the SQL Server & visualized both weekly trends & the monthly trends of the website hit rate and dynamically calculated the transformation from the hit rate to the conversion rate in both Tableau Desktop & Power BI Desktop
- Utilized Google AdWords for targeted advertising & created report in Tableau that led to a rise of Clyque's satisfaction rate by 2%, due to a linear relationship between portal features & people expectations

Environment: Excel, SQL Server, SQL Server Management Studio / SSMS, Tableau, Tableau Server, IBM Watson, R Studio, Social media analytics, Qualtrics, Survey Monkey.

Application Manager | Senior Software Engineering Analyst
Accenture, Chennai, India

Aug. 2013 - Aug. 2015

Description: Accenture, India has multiple clients and its prominent client in the European region was VanLanschot Bankiers, a Financial Services & Banking Industry client. This project was to handle their legacy banking applications.

- Led the team of 10 members and managed the team being an SME of the bank's legacy applications
- Elicited & analyzed the business requirements and converted them into technical requirement documents
- Recognized functional specifications, project schedules & timelines, and the various test case plans
- Designed user test plans, cases, and scenarios to know the business requirements, technical specifications, product knowledge and developed data access related to sorting, retrieving, & arranging banking data
- Initially analyzed banking data, created new data, & modified existing data within the reporting system
- Preprocessed the collected data, imputed missing value, and applied the business rules for report building
- Processed & updated third party dataset to improve data efficiency & created Excel Macros, VBA script to automate merging of tables in different worksheets for metrics comparison in customer feedback data
- Created pivot tables & performed VLOOKUPS in Excel and reduced report generation time of 12 hours
- Implemented security modules that helped to maintain 2 million records of customer data per month
- Streamlined project management activities such as planning, scheduling, and work estimation to meet the project milestones and prioritized the deliverables and saved resource time by 25 hours monthly
- Recruited, trained, and supervised various staffs on foreign payments and other banking technologies
- Evaluated data processing proposal to assess project feasibility and finished project milestones on-time
- Administered Single Euro Payments Area (SEPA Implementation) & provided 24*7 round the clock support for online share market maintenance, anti-money laundering, & credit card security handling application
- Enhanced the data by using efficient SQL queries and implemented Clustered Indexes, Stored Procedures, Triggers, & Temporary or temp tables that reduced the query latency rate by 80% from 10 to 2 seconds
- Managed & optimized Credit card transaction databases, which raised project throughput rate by 35%

Environment: Excel, SQL, SQL server, SSMS, VBA, Macros, SSIS, SSRS, Eximius, AML, Lotus Notes, TFS, Jira.

SQL Programmer | Software Engineering Analyst
Accenture, Chennai, India

May. 2012 - Jul. 2013

Description: Accenture, India has multiple clients and its prominent client in Australia was Toyota Financial Services, a Financial Services Industry client. This project was to develop and handle their back-end databases.

- Awarded the 'Topper of the Batch' award in the Accenture Greenfield Training conducted on the Databases management domain with expertise in Microsoft SQL and Oracle SQL servers, in Chennai, India
- Executed end to end testing, dev testing, production testing, functional testing, & reduced defect by 40%
- Worked with customers and product managers to prioritize and validate the business requirements
- Handled project which followed both Waterfall & Agile model lifecycle, and tracked them on Kanban
- Built SQL server databases with complex SQL query to monitor automobile sales and analyzed aggregated business data by using Pivot tables, VLOOKUP, Index, Match, & charts in Excel to optimize weekly reports
- Created and segregated automobile database based on car sales and normalized them for data integrity
- Developed the KPIs & predictive models for the financial reports along with their visualizations in Tableau
- Coordinated weekly estimation meeting to provide high-level estimate (Story point) for backlog item
- Evaluated code to ensure that it was valid and properly structured to meet the industry standards
- Ensured business logic by using SQL queries (CTEs & temp tables) that reduced data retrieval time by 60%
- Optimized databases with many stored procedures, views & triggers, and saved monthly 12 hrs./ resource

Environment: MS Excel, Project, SQL, SQL Server, SSMS, Tableau, SSIS, SSRS, Xml, Html, C, C++, C#, ASP.NET, TFS, Jira

SQL Programmer

Jun. 2011 - May. 2012

Zatvia Systems, Bengaluru, India (Intern- Family Company)

Description: Zatvia systems is a million-dollar software consultancy firm, registered in Bengaluru, India. It runs projects from various countries with its offshore offices situated in India. It is owned by my family members and run by my uncle, an IISC Alumnus and a freelance software consultant Thava Alagu.

- Created Zatvia systems site with programming languages like ASP.NET, C#, HTML with CSS styling sheets
- Developed web pages using Visual Studio and ensured proper coding standards with necessary comments
- Evaluated login credential & error handling on both client & server side and ensured session maintenance
- Tracked process using Jira and ensured cross browser compatible websites (Computers, Mobiles & Tablet)
- Created the On-Premises SQL server databases and continuously monitored & maintained the Databases
- Ensured that the data from the websites flow properly and got appended to the back-end databases
- Created complex SQL queries with Subqueries, Joins, Index and View to maintain data flow in databases
- Prepared reports using SSRS and handled normalization till 3NF level & ensured avoiding data redundancy
- Optimized SQL queries to get exact data results and validated the data accuracy to ensure data integrity
- Utilized SSRS and created various Reports from the SQL server and published those reports to the user

Environment: Excel, SQL, PL/SQL, MS SQL Server, Oracle, ASP.NET, C#, HTML, XML, PHP, CSS, C, C++, Microsoft Visual Studio, Team foundation server, JIRA.
