

Ali ios

Alpharetta, GA 30004

saiprtrvt_w9g@indeedemail.com

+14708525621

- Experienced Software Developer with over 8 years of experience in developing desktop/mobile application for various industrial domains demonstrating rich user interface, integrating with various Databases and Client-Server applications.
- Over 4 years of expertise in iPhone/iPad application development using Objective-C, Swift, Cocoa Touch, Xcode, Xamarin Studio.
- Experience with Interface Builder, Instruments, Mobility Tester and Static Analyzer including development, debugging, profiling, optimizing, and build process.
- Hands on experience in Network protocols, Mac/Pc to iPhone data syncing.
- Good working experience with the RESTful/SOAP APIs to consume web services in both JSON as well as XML formats by using parsers such as NSXML Parser and NSJSON Serialization, parsing with both SBJson and LibXMLs.
- Strong knowledge in implementing Core Frameworks – UIKit, Core Data, MapKit, Core Location, Core Graphics, AVFoundation, Quartz Core.
- Extensively worked with Version Control Systems SVN (Subversion) and GIT. On Jenkins and Team City for continuous integration and for End to End automation for all build and deployments.
- Experience in concurrent programming like Grand Central Dispatch (GCD), NSOperations, NSOperation Queues, XML/JSON parsing.

Work Experience

Sr. iOS/Mobile Application Developer

Cricket Wireless - Atlanta, GA

March 2018 to Present

App Link: <https://itunes.apple.com/us/app/mycricket/id626392754?mt=8>

Description:

Cricket is a Telecom company which is a subsidiary of ATT providing affordable call, text & data services to his customers. I'm working on myCricket application for the smartphones which makes it easier for its subscribers to make payments, check data, view usage, change mobile plans, or add features.

Responsibilities:

- Collaborated with the team members to identify business and customer requirements to help determine the initial design of the application.
- Developed iOS application using agile development cycles, TDD techniques and code reviews to ensure reliability of code.
- Applied concepts of Swift and Cocoa Touch frameworks to develop reliable and stable app.
- Interacted with iOS API's with Swift for application development including UIKit and Foundation Frameworks.
- Worked on Custom UI implementation with Story boards and associated with appropriate reusable classes.
- Designed UI Tab Bar Controllers, Navigation bars, UI Collection View, Segues.

- Developed the application on MVC design architecture, Cocoa design patterns and concepts like delegation, protocols and categories.
 - Integrated the Apple HIG (Human Interface Guideline) to the app.
 - Integrated Network Security in the application for security purpose.
 - Worked on MediaPlayer Framework in building video applications using swift.
 - Developed Push Notifications, Alert controllers, Scroll views.
 - Used Alamofire and ObjectMapper frameworks for client server communication to consume Restful services.
 - Used NSXML- parser for parsing after downloading data from server using RESTful calls.
 - Integrated Google geo validation and maps to show the doctor's list through out the city.
 - Presented data as Collection View and Table View using delegate and data source methods using Objective C.
 - Worked on web service calls and JSON parsing, XML parsing included in the project.
 - Pre-fetching data for different views for smooth screen transitioning.
 - Followed MVC architecture and a work data flow principle for design and development.
 - Worked on NSOperations, GCD and Blocks to perform multi-threaded development and asynchronous service calls.
 - Developed NSManagedObjectContext, NSManagedObjectModel and NSPersistentCoordinator for the Core Data implementation.
 - Extensively used Cocoa Frameworks such as SQLite, UIKit, Core Foundation, Core Data, AVFoundation and MapKit.
 - Integrate various SDK's to provide better features in the application like Google Firebase SDK, Google Tag Manager SDK, Crashlytics SDK, etc.
 - Usage of POSTMAN to interact with the HTTP API's for different environments.
 - Manager SDK, Crashlytics SDK, etc.
 - Integrated the third-party library files with help of Cocoa Pods.
 - Involved in migration of some modules from Swift 2.2 to Swift 3.0.
 - Experience with both SVN and GIT code repositories and GIT interfaces like Source Tree
 - Used Key Chain for storing login credentials. And used Fortify for the application security.
 - Worked on BT/BLE Communications, and Integrated Bluetooth Wireless Technology Such as BLE.
 - Responsible for App support and latest versions compatibility.
 - Worked along with the QA team to draft the various text cases and performed rigorous testing to check for app stability and performance.
- Environment: iOS 9.x, 10.x, XCode, Swift 2.x, 3.x, Agile Methodology, UIKit, MapKit, iPhone SDK, Google SDK, Firebase SDK, Crashlytics SDK ,Objective-C, Cocoa Frame work, JSON, XML, REST, GCD, SQLite, Mobile Connect SDK, Jenkins, GIT, SQL, iBeacon, Mac OS X, JUnit, Agile Sprint Planning, RESTFUL web services, JSON

iOS/Mobile Application Developer

Parser, Test Flight Anthem - Atlanta, GA

February 2017 to March 2018

App Link: <https://itunes.apple.com/us/app/anthem-anywhere/id589443627?mt=8>

Description:

Anthem Anywhere mobile application allows members to find nearby urgent care centers, ERs, doctors and pharmacies covered by a member's insurance plan. It also gives members instant access to their ID card, which can be emailed from the app, and much more.

Responsibilities:

- Involved in requirement gathering and outlining by collaborating with the various teams such as business, design and while following the Agile Scrum

Methodology.

- Designed and developed User Interface applications, integrating with various Databases and Client-Server applications in iPhone/iPad application development using Objective-C, C++ , Swift, Cocoa Touch, UIKit, SQL, Cocoa Bindings, Core Animation custom controls and object oriented programming.
- Used Cocoa pods as a 3rd party API management.
- Created Notifications module that resurfaces notification messages through APN's from a database connected on a secure socket.
- Worked on Docker containerization and collaborated in setting up a Jenkins using Docker Swarm.
- Utilized Swift to develop POCs by creating rich UI components/widgets in the app framework.
- Integrated development experience from coding to running and debugging of a Cordova application.
- Developed, build and deployed scripts using ANT and MAVEN as build tools in Jenkins to move from one environment to other environments.
- Incorporated the Push Notification feature using APNS, in order to notify the user when any file operations were done.
- Developed the screens, UIViews and many UI elements using storyboards in Swift.
- Responsible for creating and updating the documents which should be shared to users on the present application.
- Access crash reporting tool - Crashlytics, to find the crashes and to fix the crashes in the application.
- Used Git for source control, created branches, and merged to the main development branch.
- Used Alamofire 3.4, Swift-based HTTP networking library, to integrate with the web services from the backend perspective so that data can go, to and fro.
- Swift 2.x and Swift 3.x, Protocol oriented programming with functional approach, UnitTesting (XC Test Case), Code coverage, GCD, closures
- Good experience in parsing JSON Data with and without third party API into Swift code.
- Used APNs for sending notifications to users' apps.
- Built and created some logical changes in the code to get the push notification on the devices.
- Participated in sprint planning meetings and help set team goals and velocity.
- During development of project, tracked the issues using JIRA.
- Tested the application for memory leaks and relevant bugs, fixed the leaks and deployed on device firmware to validate application stability.

Environment: iOS 9.0, XCode 8.0, objective-c, Swift 3, foundations Frameworks, MVC design, UIKit Framework, Core graphics, Crashlytics SDK Quartz core framework, Core Location, AVFoundation, Cocoa Touch, GCD, Cocoa Framework, Alamofire, Interface Builder, iPhone Simulator, JQuery, REST, GIT.

Zions Bank - Salt Lake City, UT

Jan 2016 to Feb 2017 iOS Developer

App Link:

<https://itunes.apple.com/us/app/zions-bank-mobile-banking/id337012799?mt=8>

Description:

Zions Bank is Utah's first Chartered Bank headquartered in Salt Lake City, Utah.

With its iOS app, users can check account balances, transfer money between eligible accounts, pay a bill, deposit a check, or find a Zions Bank branch or ATM locations.

Responsibilities:

- Built iOS Storyboards with UI TabBar Controllers creating segues between different views, established IBOutlet, IB Actions in the storyboard.
 - Used UserDefaults to save the user's username.
 - Used UIImagePickerController to take pictures of the checks to be deposited into the account.
 - Developed the login view, account information view and payment view among many other views.
 - Implemented push notifications to send notifications related to payment due date, posted payments, etc.
 - Invoked RESTfull Webservices using NSURLSession and Parsed JSON responses using NSJSONSerialization.
 - Used Custom Map Annotation pins to display stores within an area.
 - Implemented MapKit framework for company location, by adding Maps, annotating maps and also by adding overlays.
 - Used AV Foundation Framework to record audio from the device.
 - Implemented Dropbox API for sharing and backup.
 - Implemented Core Data framework to store user Data.
 - Implemented NSOperation Queue and NSURL Connection to integrate with backend web services.
 - Used Hockey web application to distribute builds to the testing team.
 - Developed unit tests for testing specific functionality and logic.
 - Fixed bugs as documented by QA team.
 - Used Instruments to fine tune the app performance and memory management.
 - Formatted the Data as per Business rule to display in UI.
 - Followed a work data flow principle for design and development.
 - Worked closely within a cross functional team of testers and developers.
 - Debugging issues at onsite whenever required.
 - Worked with GDB and Xcode for debugging.
 - Worked with Subversion to checkout and update the codebase changes.
- Environment: iPhone SDK, XCode, SQLite3, SQLite Manager, Objective-C, Cocoa Touch, GIT and Instruments.

Java Developer

Avantel Softech Limited - India

July 2013 to August 2015

Responsibilities:

- Designed and developed of UI using HTML/DHTML, CSS, Dojo & JavaScript.
- Used HTML, XML, AJAX, JavaScript, CSS and pure CSS layouts.
- Configuring Hibernate, Struts and Tiles related XML files.
- Performed Database connectivity and transactions and also wrote stored procedures as per the requirement in MY-SQL.
- Developed each and every web page which handles all popular search engines which targets the Search Engine Optimization (SEO).
- Used to work with OOPS concepts and memory concepts like string pool.
- Used Eclipse for writing code for HTML, Java, Servlets, JSP and JavaScript.
- Implemented various design patterns like, MVC, Factory, Singleton.
- Developed the action and action form classes, based on the Struts framework, to handle the pages.
- Used JDBC connectivity with callable statements to invoke the stored procedures.
- Used multithreading in programming to improve overall performance.
- Deployed and tested the JSP pages in Tomcat server.

- Worked on code reviews, debugging, unit testing and integration testing.
- Worked on source code management tools such as SVN.

Environment: Java, Visio, Adobe Photoshop HTML, CSS, Javascript, Hibernate, Struts, JDBC, AJAX, XML, DHTML, SEO, Tomcat, My SQL, JSP, SVN.

Education

Bachelor's in Computer Science

Osmania University

Skills

- Database
- Web Technologies
- Java
- Mac OSX
- JSON
- C
- PHP
- Operating System
- jQuery
- Mobile Operating System
- iPad
- HTML 4/5
- SOAP
- Windows XP
- ANGULAR JS
- Swift
- Source Tree
- Linux.
- CSS 2/3
- Linux / UNIX Internals
- JIRA
- SVT
- Windows MOBILE
- C++
- Scripting Language
- .NET
- Windows 7
- XCode
- Version Control Tools

- GIT
- C#
- Frame Works
- JavaScript
- Objective-C
- REST
- SQ lite, Microsoft SQL, Mongo Db
- iOS
