

# Bhanu Prakash

Jersey City, NJ 07306

[bhanuprakashkpeeb\\_njf@indeedemail.com](mailto:bhanuprakashkpeeb_njf@indeedemail.com)

+1(224) 904-2882

- 10 years of experience in Object Oriented Analysis, Design, Development, Testing, Implementation and Post Implementation Support in all phases of Web based, Client-Server Applications and N-tier Architectures. Well versed in both Server-side and Client-side programming.
- Extensively followed Agile software development process & Test-Driven development approach.
- Extensive experience in Web application development using JDBC, Servlets, JSP, JSTL, Java Beans, MVC, Struts, JMS, SOAP, Spring, Hibernate, RESTful, JavaScript, AngularJS AJAX, XML and HTML.
- Great knowledge in Java architecture and developing the applications using Java/J2EE design Patterns such as MVC, Singleton, Factory, Transfer Objects, Front Controller and Data Access Objects (DAO).
- Worked on new features of Java 8 Annotations, Generics, Enhanced for loop, Enums and Lambda expressions.
- Strong experience with frontend technologies like HTML5, CSS3, Scripting languages like JavaScript, JQuery, AJAX, AngularJS and good knowledge in ReactJS.
- Experienced in implementing Microservices, Service Oriented Architecture (SOA) with XML based Web Services (SOAP/WSDL).
- Experience in designing and developing multi-tier enterprise applications using Java 1.7/1.8, JEE & related technologies such as Servlets, Struts, Spring, JDBC, Hibernate, JPA, XML, JSP, HTML and Web services.
- Extensive experience in developing Microservices using Spring Boot and used Build/deploy tools such as Jenkins and Docker for Continuous integration and Deployment for Microservices.
- Developed and deployed J2EE applications on both Web and Application Servers including Apache Tomcat, JBoss.
- Experience in writing numerous test cases using JUnit framework. Expertise in developing dynamic web pages in HTML with AngularJS for UI and developed single page applications by using AngularJS.
- Proficient with development of RESTful Web Services using JAX-RS for exchange of JSON and XML representations. Expertise in developing dynamic web pages in HTML with AngularJS for User Interface and developed single page applications by using AngularJS.
- Good Knowledge of using IDE Tools like Eclipse, IntelliJ for Java/J2EE application development.
- Proficiency in writing complex SQL queries, stored procedures, database design, creation and management of schemas, functions and Triggers.
- Front-end UI development experience using scripting languages like HTML5, CSS3, JavaScript, JQuery, AJAX, JSON.
- Intermediate experience with Advanced JavaScript including prototype-based inheritance, AJAX, JSON and familiar with JavaScript frameworks such as, JQuery.
- Experience in building web applications using Spring Framework features like Spring Core, IOC (Inversion of Control), Spring Dependency Injection, Spring ORM, Hibernate, MVC (Model View Controller), Boot, Security, Spring Web Flow DAO (Data

Access Object) and familiarity with AOP (Aspect Oriented Programming).

- Experience in HTML, DHTML and JSP for developing web based GUI components and Single Sign On with AD and LDAP and SAML-based Single Sign-On (SSO).
- Used Hibernate Transaction Management, Hibernate Batch Transactions and Cache concepts.
- Good Knowledge on working with OAuth2.0 to provide authentication and authorization to Rest services by exchanging Access tokens.
- Extensive Knowledge in Data Modeling, administration and development using SQL and PL/SQL in Oracle, MY-SQL, DB2 and SQL Server environments.
- Expertise with Relational databases such Oracle, PostgreSQL, SQL server and MYSQL, PL/SQL.
- Designed and developed custom Mongo applications specific to client needs and proficiency in multiple databases like MongoDB, Cassandra, MySQL, ORACLE and MS SQL Server. Worked on MongoDB database concepts such as locking, transactions, indexes, Sharding, replication, schema design.
- Expertise in development, deployment and implementation of dynamic web applications using Application servers like WebSphere, Apache tomcat in Windows and UNIX environments.
- Experience in handling WebLogic scripts for server management and application deployment.
- Experience in building, designing and implementing scalable cloud-based web applications for PaaS, IaaS or SaaS using AWS and Azure.
- Experienced working on CI/CD allowing deployment to multiple client Kubernetes/AWS environments.
- Worked on setup the Kubernetes sandbox on Azure Kubernetes Services (AKS) for testing the different features and manage containerized applications using its nodes, ConfigMaps, selectors, services, and deployed application containers as projects.
- Excellent analytical, problem solving, challenging work, communication and Interpersonal
- skills with ability to interact with individuals at ease.

Willing to relocate: Anywhere

## Work Experience

---

### **Java Full Stack Developer**

Morgan Stanley - Montréal, QC

September 2020 to Present

Responsibilities:

- By extensively following Service-Oriented Architecture, involved in design and development phases of Software Development Life Cycle (SDLC). Analyzed, designed and implemented application architecture to suit the development of software using Java/J2EE.
- Developed and maintained complex software components in compliance with department standards including JSP, JSTL, JMS, JAX-WS, RESTful APIs.
- Converted a monolithic app to microservices architecture using Spring Boot.
- Implemented REST Microservices using Spring Boot. Generated Metrics with method level granularity and persistence using Spring AOP and Spring Actuator.
- Implemented the Project structure based on Spring MVC pattern using Spring Boot.
- Implemented custom directives, filters, components, accordions, wizards etc., in

AngularJS. Also Implemented JAX-RS web services using Spring Framework using AngularJS (GUI) client.

- Involved in developing application using Postgresql and wrote SQL and PL/SQL queries to test the data that was sent through the external REST API calls.
- Implemented WebSocket in web browsers or web servers for client or server application.
- Monitored and developed build scripts for build management.
- Developed front end web application using AngularJS along with cutting edge HTML5, ReactJS and CSS. Used SAX/DOM XML Parser for parsing the XML file.
- Developed web-based systems using Internet standards such as HTTP, XML, SOAP, Web Services.
- Involved in developing the Single Sign On module (SSO) features integrating with the Active Directory LDAP server and implemented SAML for SSO login.
- Used SAML for SSO login to access the web service provided and OAuth 2.0 for authorizing the user to the application.
- Single Sign On(SSO) authentication is implemented using Spring security and Site Minder.
- Implemented OAuth 2.0 and SSO in order to secure the application from unauthenticated user.
- Used Identity access Management (IAM) and SSO to control user access to the application based on the entitlements like admin, editor, viewer.
- Developed Spring Boot application for building end customers for the services provided, using ORACLE Database, JDBC.
- Worked on creating various types of indexes on different collections to get good performance in MongoDB.
- Composed and executed MongoDB scripts and queries to fetch and test data from NoSQL databases.
- Used jQuery to navigate to different pages of the application using DOM elements, and to create AJAX pages.
- Administrating WebSphere Application Server 6.x, 7.x version.
- Deployment of application is performed on IBM WebSphere application server.
- Worked on setting up Azure DevOps to reduce the failover downtime to minutes and to automate the Docker containers deployment without using configuration management tool.
- Replicated the production environment in Azure that serves as a sandbox environment. Copy the data over from production to Sandbox.
- Managed to Set up Azure DevOps and build jobs to provide Continuous Automated builds based on polling the Repos source control system during the day and periodically scheduled builds overnight to support development needs using Azure DevOps repos.
- Worked on Kubernetes to manage containerized applications using its nodes, Configuring Maps, selector services and deployed application containers as Pods. To provide secured network connectivity to the containers we used Calico.
- Responsible for build and deployment automation using Docker, Kubernetes containers.
- Used Spring Config server for centralized configuration and Splunk for centralized logging. Used Concourse and Jenkins for Microservices deployment.
- Setup Kafka MQ Clustering for high availability and administration purposes & Providing 24/7 support for the MQ issues.
- Developed Gradle scripts to build and deploy the application onto Application Server and ran UNIX shell scripts and implemented auto deployment process.

- Implemented Micro services in order to separate the tasks and not to have dependency on other Parallel on-going tasks of the Application.
  - Configured SSL connection between two RESTful Servers using Spring-Security and Tomcat.
  - Implemented OAUTH 2.0 (Rest service authentication) in our application in order to communicate securely with other protected resources by exchanging access tokens for authentication instead of using username and passwords.
  - Involved in Unit Testing/Integration Testing, JUnit, Debugging and Implementation.
- Environment: Java 1.8, HTML, CSS, JavaScript, AngularJS, IntelliJ, JQuery, JDK, Java, ReactJS XML, Jenkins, RESTful, SOAP, JMS, Spring, Spring Security, GIT, PostgreSQL, Microservices, OAuth, SAML SSO, Kafka MQ, WebSphere, MongoDB, Azure,

## **Java Developer**

Docker, Kubernetes. Manuvie, - Montréal, QC  
January 2016 to August 2020

### **Responsibilities:**

- Participated in all phases of software development life cycle, working with architects in understanding the design of requirements, prototyping, coding, testing, development and support.
- Used Core Java concepts such as Collections, Generics, Multi-Threading and actively coded most of the Core Java implementations.
- Developed and published server-side business logic in a simple POJO for various account portfolios, equities, asset/equities ratios, by using core Java collection, generics.
- Worked on various SOAP and RESTful services used in various internal applications.
- Consumed REST based Micro services with Rest template based on RESTful APIs.
- OAUTH 2.0 authentication framework is used to provide security to RESTful web services by generating access token in order to access protected resources.
- Developed the web application using Spring, JSP, HTML. Implemented the application using J2EE design patterns like Spring, Singleton, DAO (Data Access Object), DTO (Data Transfer Object).
- Used Spring Boot to collect the data from users and packaged the data as JSON distributed to applications.
- Configured Hibernate second level Cache using Eh-Cache to reduce the number of hits to the table data.
- Used MAVEN for developing build scripts and deploying the application onto WebLogic.
- Application Deployed in Linux servers using WebLogic
- Involved in configuring builds using Jenkins with Git and used Jenkins to deploy the applications onto Dev, QA environments.
- Built Jenkins jobs to create AWS infrastructure from GitHub repos containing Terraform code and administered/engineered Jenkins for managing weekly Builds and integrated Jenkins with SonarQube.
- Created AWS CloudFormation template by using JSON/YAML and implemented Tomcat and Apache Web servers for deployment and coordinated with offshore and onshore teams for production, also created CRON job for recovering crucial data of production by using AWS REST API.
- Involved in unit testing, system integration testing and enterprise user testing using JUnit.
- Used connection pooling for optimization using JDBC interface. Developed processing component to retrieve customer information from MySQL database, developed DAO layer using Hibernate.
- Wrote prepared statements and called stored Procedures using callable statements in MySQL.

- Developed JSP and Java classes for various transactional/ non-transactional reports of the system using extensive SQL queries.
- Worked with Architects of the team to analyze the business requirements, created technical design documents, and delivered the projects on time.
- Worked on JIRA for Issue Tracking and monitoring.
- Worked in an Agile environment and provided status updates.

Environment: J2EE, Java, Spring, JSP, Hibernate, XML, Java Beans, JavaScript, CSS, HTML, SOAP, Restful OAUTH 2.0, Web Services, JMS, Spring Boot, JDBC, STS, MySQL, Tomcat, Apache Ant, J2EE design patterns, WebLogic, Junit, Jenkins, AWS, Linux.

## **Java/J2EE Developer**

Mentor Graphics - Montréal, QC

June 2012 to December 2015

Responsibilities:

- Analyzed and translated use case-based requirements into design and constructed various UML artifacts such as Class diagrams, Sequence diagrams, Activity diagrams, Data Model and View of participating classes and VO's using Enterprise Architect tool.

- Extensively used Core Java concepts such as Multi-Threading, Exceptions, and Collections in Application.

- Developed the UI Screens using JSP and HTML and did the client-side validation with the JavaScript.

- Expertise in development, deployment and implementation of dynamic web applications using Application servers like Apache tomcat in Windows and UNIX environments.

- Used Log4J to capture the logging information and used GIT version control systems for maintaining the component for release and version management. Used MAVEN for the entire build process.

- Developed Hibernate mapping files and Hibernate configuration for persisting data to the database.

- Involved in the database design and development using IBM DB2. Designed Database and wrote SQL queries and Stored Procedures for interacting with the Oracle database.

- Developed the application using Struts Framework with respect to Model View Controller architecture.

- Developed Struts Action and Action Form Java classes as needed, added information to the struts-config.xml configuration file to fit a given page into the flow of the application.

Environment: J2EE, Struts framework, JSP, Hibernate, DAO, XML, , JMS, DML, MVC, SOAP, Junit, DB2, Log4J, IBM Rational Rose, GIT, ANT, Unix.

## Education

---

### **Bachelor's Degree in Computer Science**

JNTUK University

August 2008 to April 2012

## Skills

---

- jQuery
- MS SQL Server

- Power Mockito
- Jasmine
- JIRA
- SVN IDE/Tools: Eclipse
- PL/SQL
- SQL
- Scrum
- XML
- IntelliJ IDEA
- Spring Tool Suite
- Jenkins
- AJAX
- Backbone JS
- TestNG
- XML SchemaDHTML
- Maven
- WSDL
- Restful
- Apache Tomcat WebServer
- AngularJS
- JIRA
- Bugzilla
- AWS Version Control Tools: GitHub
- JBoss Application Server Web Services: SOAP
- Spring
- XML
- JAX-RS
- XSLT and JAX-WS Frameworks: Struts
- J2EE (Servlets, JSP, EJB, JavaBeans, JDBC, JMS, JPA, JNDI, JAX-WS, JAX-RS)
- Java
- SED
- Rational Rose
- Jenkins for CI/CD SDLC: Agile
- DB2
- Mockito
- Docker
- CSS3
- Gradle
- XSLT
- Knockout JS

- React js
- Kubernetes
- Struts. Programming Languages: C
- React
- JSON RPC
- DTD Databases: MySQL
- JBOSS Developer Studio
- JAX-B
- Maven
- IBM WebSphere Application Server
- JSF
- Jenkins
- Cucumber
- XSL
- Oracle
- NetBeans
- Junit Cloud: Azure
- WebSocket
- AWS
- Waterfall Build and Performance Managing Tools: Ant
- Cassandra
- Java 8
- AngularJS & 2
- RSA
- SonarQube. Testing: Junit
- Selenium
- C++
- MongoDB Web/App. Server: Oracle WebLogic Application Server
- Entity Framework
- XHTML
- ANT
- CVS
- HTML5
- PL/SQL Web Technologies: JavaScript
- MVC
- RAD
- Apache Axis
- XHTML
- Hibernate
