

# Bharath Sivakumar

## Senior Business Systems Analyst

Email: [bharathsivakumar7@gmail.com](mailto:bharathsivakumar7@gmail.com)

Contact : +1 (949)403-8900

Accomplished and highly skilled Business Analyst with over 8 years of experience in the Healthcare, Health Insurance, and pharmaceutical sectors working in Agile and Non-agile environment. Possesses a broad knowledge of documenting and presenting project deliverables at every milestone. In-depth understanding of business processes in medical care associations, Health organizations, and Health Insurance field (medical care programs). Strong comprehension of Business Process Management, Business Process Modeling, and Business Process Reengineering (BPR). Goal-oriented and multifaceted professional with a proven track record of successfully delivering projects in a timely and cost-effective manner.

### Professional Summary:

- Profound knowledge in understanding and hands-on experience with diverse **healthcare domain** concepts such as **Health Insurance Portability and Accountability Act (HIPAA)**, **Health Information Technology for Economic and Clinical Health Act (HITECH)**, and **Claims processing**, ranging from the **claim submission** to adjudication. Proficient in identifying claims processing issues, determining their origin, and providing instant resolutions. Possesses comprehensive knowledge of the **healthcare industry's Protected Health Information (PHI)** regulations and standards. **Exhibits proficiency in various data formats like Electronic Data Interchange (EDI) and HL7 Interface Implementation.**
- Understanding of insurance policies such as **Health Maintenance Organization (HMO)** and **Preferred Provider Organization (PPO)**, proven experience with **HIPPA EDI transaction codes** such as **270/271 (inquire/response healthcare benefits)**, **276/277 (Claims status)**, **834 (Benefits enrollment)**, **835 (Payment/remittance advice)**, **837 (Health care claims)**
- Implemented and optimized the **Software Development Life Cycle (SDLC)** using **Waterfall, Waterfall-Agile Scrum (Hybrid), Agile-Scrum methodology**, and working with agile frameworks such as **Scaled Agile Framework (SAFe)** in a collaborative environment. Leveraged advanced tools and techniques to enhance the efficiency and effectiveness of software engineering processes, including **continuous integration, automated testing**, and deployment strategies.
- Collaborated between various **Business and Technical Stakeholders** to elicit Functional and Non-Functional requirements through performing a variety of **Requirement Elicitation** techniques such as **JAD Sessions, Interview, Brainstorming, Requirements Workshop, Survey and Questionnaire, Document Analysis, Focus Groups, SWOT Analysis, Interface Analysis**
- Experienced in conducting **Feasibility studies, Risk Analysis, Cost-Benefit Analysis, and Impact Analysis** to analyze the needs of a project. Performed **GAP Analysis, Risk Analysis** to understand the business processes and improved the teams' competencies by assisting the **Project Manager** in creating **Work Breakdown Structures (WBS)** and **Critical Path Analysis (CPA)**
- Experienced in creating and documenting project artifacts such as **Business Requirements Document (BRD)**, **Functional Requirement Document (FRD)**, and **Systems Requirements Specification (SRS)** document as to when needed.
- Proficient in creating **Unified Modeling Language (UML) diagrams: Use Case diagram, Activity diagram, Sequence diagram**, using **MS Visio** and **Lucid Charts** for an explicit understanding of the project and **communicating** the information with the teams by using **Business Presentation** tools like **Prezi, Canva, Video Scribe, and Microsoft Events**
- Proficiently designed **user interface prototypes** and **wireframes** with an iterative approach, ranging from **low-fidelity sketches** to **high-fidelity mockups**, using industry-standard tools such as **Balsamiq** and **Microsoft Visio**. Applied user-centered design principles, usability heuristics, and best practices to create intuitive and engaging designs that align with business requirements.
- Demonstrated expertise in **Agile software development methodologies**, particularly **Scrum**, including thorough understanding of **Scrum ceremonies** such as **Sprint Planning, Daily Stand-ups, Sprint Review, and Sprint Retrospective**. Collaborated closely with the **Product Owner** and **Development Team** to facilitate effective communication and ensure alignment of project objectives. Participated in **Scrum of Scrums (SOS)** meetings to manage dependencies and resolve issues across multiple teams. Utilized collaborative tools such as **MS SharePoint** and **Confluence** to maintain transparency and facilitate efficient communication.
- Efficiently documented various Scrum Artifacts such as **Product Backlog, Release Backlog, Sprint Backlog**.
- Refined the **Information Radiators/Big Visible Chart (BVC)** with the Scrum Master, including the **Sprint Burn-up chart, Burn-down charts, Release Burn-up chart, Release Burn-down chart, and Control charts**. Collaborated with the Scrum Master and the Development Team to ensure the **accuracy** of the charts and timely updates to reflect the progress of the project.
- In-depth knowledge in writing **User Stories** based on **INVEST (Independent, Negotiable, Valuable, Estimable, Small, Testable)** Criteria and **Acceptance Criteria** using Project Management tool like **JIRA**, along with aiding product owner in determining **Minimum Viable Product (MVF)**, **Minimum Requirement feature (MRF)**, and **Minimum Marketable Feature (MMF)**
- Collaborated with the Product Owner and the teams in writing **Definition of Ready (DOR)** and **Definition of Done (DOD)**
- Explicit insight and knowledge of **Data warehouse implementation, Extract-Transformation-Load (ETL) process, Data Profiling, Data Cleansing, Data Integration, Data Migration**, concepts with experience in implementing **Databases, ODS, Data marts, Data integration** using **Business Intelligence (BI)** tools like **Informatica PowerCenter's (IPC) Designer and Workflow Manager**. Thorough knowledge of **Schemas (Star, Snowflake, Galaxy), OLTP, and OLAP operations**.
- Skilled in identifying various **Entities** and their **Relationships**, created **Entity-Relationship Diagrams (ER)**, and then associated **Conceptual and Logical Data Model** to define the required objects accurately (without any **Redundancy**) in the Database.

- Created and documented **Data Mapping Document** and **Use Case Documentation** as to when needed and has experience in various **data retrieving**, **data validation**, and **data extraction** process using **SQL** queries such as **Joins**, **Unions**, **Aggregates**, and **Triggers** to better understand and interpret documents that contain results from databases, to conduct a deeper analysis of the data.
- Proficient in leveraging the benefits of **AWS Redshift Data Warehouse**, a cloud-based, **petabyte-scale data warehousing service**, that delivers lightning-fast query performance using standard **SQL-based** tools and **Business Intelligence (BI)** applications. Effectively utilizes **Redshift's parallel processing architecture** to store and analyze large datasets and create custom reports and visualizations using popular BI tools such as **Tableau and Power BI**.
- Substantial knowledge of best **Agile** testing practices such as **Test-Driven Development (TDD)**, **Acceptance Test-Driven Development (ATDD)**, **Behavior-Driven Development (BDD)**, and **continuous integration** of the Shippable Product
- Maintained the **Requirement Traceability Matrix (RTM)** to check functionalities coverage with test cases.
- Solid knowledge of **Three-Tier Architecture** and using various web services like **Simple Object Access Protocol (SOAP)**, **Representational State Transfer (REST)**, **Extensible Markup Language (XML)** for successful systems communications.
- Experienced in **Application Program Interface (API) testing** using **Postman** and **SoapUI** to check if the API response data is in **JSON or XML format** as required by workflow to resolve discrepancies and used **Swagger** for **API documentation**
- Liaised with the QA Team to design and implement **Test Plans**, **Test Scenarios**, **Test cases** and performed **Black box Testing**, **System Testing**, **Integration Testing**, **Functional Testing**, **Regression Testing**, **Load/Stress Testing** and **Sanity Testing** and **Usability Testing**, **Performance testing**, **UI Testing** using testing tools.
- Assisted the **User Acceptance Testing (UAT) team** in performing UAT Test and gathered the clients' feedback during that phase.
- Possess extensive experience in **Bug and Defect tracking** and their fixing by using bug tracking tools like **HP-ALM**, **HP-QC**, and **JIRA-Zephyr**
- Experienced in using **Tableau**, to create interactive dashboards and reports like **heat maps**, **bar graphs**, **pie charts**, and **pivot tables** to derive business insights from **OLAP** cube and used **Tableau connectors** to embed insights to dashboards.

#### Technical Skills:

|                                                |                                                                                                                                                                                                  |

| <b>SDLC</b>                                    | Agile-Scrum, Scrum-Waterfall Hybrid, Waterfall                                                                                                                                                   |
| <b>Business Skills</b>                         | Change Management, Impact Analysis, JAD Sessions, Project Planning, Project Scheduling, Issue Management, Conflict Management, Interviews                                                        |
| <b>Business Modelling Tools</b>                | MS Visio, Lucid Charts, Balsamiq                                                                                                                                                                 |
| <b>Project Management Tools</b>                | JIRA, MS SharePoint, Confluence, Microsoft Project                                                                                                                                               |
| <b>BI and Reporting tools</b>                  | Tableau, MS Office Suite (Excel, Word, PowerPoint, and Outlook), Power BI                                                                                                                        |
| <b>Architecture/Framework</b>                  | Service-Oriented Architecture (SOA), 3-Tier Architecture, n-Tier Architecture                                                                                                                    |
| <b>Technologies / Languages</b>                | Amazon Web Services, Azure API, Salesforce Health Cloud, Java, C++, SQL, PL/SQL                                                                                                                  |
| <b>Tools / Testing Tools</b>                   | Cucumber, Selenium, HP ALM, Postman, Azure Test/Monitor                                                                                                                                          |
| <b>Databases and ETL Tools</b>                 | MS SQL Server, My SQL, Informatica Power Center, AWS glue, and AWS kinesis, Amazon Redshift, Azure SQL DB, Azure Data Factory                                                                    |
| <b>Data Modeling and Data Warehousing</b>      | Dimensional Data Modelling, Fact and Dimensional tables, Data Mining, Slice/Dice, Star and Snowflake Schema, OLTP, OLAP, MOLAP, Enterprise Datawarehouse, Operational Datastore, Data Marts, ETL |
| <b>Marketing Skills</b>                        | SEO, SMM, Google Ads, Facebook Ads, MailChimp (Email Marketing)                                                                                                                                  |

#### Professional Experience:

**Eli Lilly, Indianapolis**

**Jun 2022 - Present**

##### ***Sr. Business Systems Analyst***

The project was focused on launching a **remote monitoring program** that aimed to help patients with chronic conditions. The program utilized **connected devices** to monitor patients' health metrics such as blood pressure, glucose levels, and weight. The program also allowed for **remote communication** between patients and healthcare providers, reducing the need for in-person visits and increasing accessibility to care. Overall, the aftermath of the program improved health outcomes for patients with chronic conditions while also reducing healthcare costs by **10%**, reducing admission by **20%** and hospital readmission by **17%**.

#### Responsibilities:

- Analyzed and ensured compliance with the **Health Insurance Portability and Accountability Act (HIPAA)** and **Health Information Technology for Economic and Clinical Health (HITECH)** compliances and **Federal Information Security Management Act (FISMA)** throughout the **project's lifecycle**, worked with developers to implement necessary controls and measures to ensure the system meets requirements and data security standards to facilitate interoperability between systems.
- Conducted **Document Analysis** and **GAP Analysis** to gain a deep understanding of the current state of the project's **AS-IS** business process flow and establish the desired **TO-BE** state. Devised action plans to fill performance gaps identified.

- Employed a range of **requirement elicitation techniques**, such as **Interviews, Brainstorming, focus groups**, to gather **Business Requirements** from stakeholders. Created my **Personal Space** using **SharePoint** to document **initial requirements** and shared them on **Team Space** to encourage **brainstorming** and provide clarity on requirements for team members.
- Conducted **Joint Application Development (JAD)** sessions with **Subject Matter Experts (SMEs), Doctors, Developers, System Architects, System Engineers, Testers, and Key Stakeholders** to extract, analyze, and develop effective solutions for the **TO-BE** system, utilizing technical expertise and active listening skills to identify key requirements and design specifications.
- Developed **Business Process Model (BPM)** using industry-standard notation to capture and illustrate the business process workflow. Created **Data Diagrams**, including **Context diagrams**, to provide stakeholders with a clear understanding of how data flows through the system and how various system components interact. Utilized **UML diagrams**, such as **Use Case diagrams, Activity diagrams, and Sequence diagrams** using **Lucid Charts**, to convey the project's flow and requirements to all stakeholders.
- Used **Balsamic tool** to create both **low-fidelity wireframes** and **high-fidelity mockups** to visualize the **UX/UI** of the system.
- Worked on **Fast Health Interoperability Resources (FHIR) interoperability** to consume real-time data and feed into cloud. Helped in initiatives of **Health Level 7 (HL7) integration data mappings, Webservice mappings, and API data exchanges**.
- Worked closely with the **Electronic Data Interchange (EDI) Analyst** to establish the pipeline for electronic transmission of health vital information, such as blood pressure, patient glucose levels, and physical function rate, to meet **HITECH** requirements.
- Executed **impact analysis** and managed **change requests** from stakeholders by following strict **change management procedures**.
- Collaborated closely with the **Product Owner** to effectively merge **Product Vision Meetings, Backlog Grooming, Sprint Planning, Daily Scrum, Sprint Review, Sprint Retrospective** ensuring all Agile methodologies were followed meticulously.
- Utilized **JIRA** to create **User Stories** that comply with the **INVEST criteria**, and meticulously defined **Acceptance Criteria** for each User Story. Worked in close collaboration with the team to establish clear requirements for **Definition of Ready** and **Definition of Done** and provided valuable assistance to the Scrum Master in facilitating **slicing, prioritization, and estimation techniques** to User Stories such as **Vertical slicing, MosCow Technique and Planning Poker** respectively.
- Conducted comprehensive analysis to identify and extract clinical data from various types of **Relational Databases (RDBs)**, and skillfully ingested this data into the target **Operational Data Store** with the assistance of data analysts.
- Conducted detailed source system data analysis, formulated **data mapping specification document** to efficiently map source data from **ODS** to **Amazon S3**. Collaborated with the team to perform complex **ETL operations** using **Amazon Glue** and **Workflow Manager**, and applied **OLAP queries** and operations to analyze clinical data and generate reports for informed decision making with the various health data of the patient's **real-time data** from different **IOT devices** such as Weighing scale, glucose monitor.
- Collaborated with **machine learning engineers** in developing machine learning models such as **Logistic Regression, Random Forest and Decisions Trees** using **AWS SageMaker's** pre-built algorithms and used Python for querying and data manipulation.
- Collaborated with the development team to define and implement **Lambda functions** to enable seamless integration of new data to **Amazon S3** and **AWS Redshift data warehouse**, and effectively utilized **Amazon Kinesis** for real-time data analysis.
- Contributed to the development of **automated notification funnels** such as email, SMS, and notification functionality to alert both the patient and physician of any anomaly in the patient's condition, providing timely notifications for improved patient care.
- Contributed to the implementation of **Behavior Driven Development (BDD)** methodology by writing **feature files** in **Gherkin** using **Cucumber** framework, ensuring that they met the specifications and standards.
- Managed **release management process**, including coordinating with development, testing, and deployment teams, facilitating **release planning meetings, managing release documentation**, and ensuring compliance with **ITIL** and Agile principles. Utilized tools like **Jira, SharePoint** to manage **release pipelines** and maintain **version control**. Conducted **post-release reviews** to identify areas of improvement and ensure **continuous improvement** of the release process.
- Produced accurate and comprehensive **REST API documentation** using **Swagger** and performed functional API testing using **Postman**, to verify the data response format in **XML or JSON**, in accordance with system requirements.
- Reviewed and aided on the **Test plan, Test cases and Test scenarios, for integration testing, regression testing, Failover, Recovery testing, Smoke Testing, Security testing and User Acceptance Testing (UAT)** and documented feedback.
- Collaborated with the Business Intelligence team to design and create customized **interactive reports** like dashboards and graphs using **Tableau** to provide visual insights into patterns, frequency, and variations of different health data.
- Facilitated **communication and collaboration** among stakeholders and ensured that the project was delivered **on time** and within **budget**.

**Environment:** *Agile-Scrum, Amazon Web Services, Amazon API Gateway, Amazon Kinesis data stream, Amazon S3, AWS SageMaker, Amazon Quicksight, Lucid Chart, Balsamic, Tableau, JIRA (7.8), Cucumber, Sharepoint, Swagger, Postman, Informatica, MS Office 365.*

**Elevance Health (Anthem, Inc), Atlanta, GA**

**December 2021 - May 2022**

**Sr. Business Systems Analyst**

The project is for a Health Insurance company. It was focused on the goal of providing users with a **wider variety** of insurance providers and options, leading to increased **user engagement** and **retention**. The project will also implement **data analytics and monitoring** to track key performance indicators and ensure **continuous improvement** of the platform. The platform will utilize **centralized data governance** and adhere to **HIPAA** regulations to ensure the privacy and security of user data using **Azure Data Factory** and **Azure SQL Database**

### Responsibilities:

- Developed good understanding of **Health Insurance claims** and the business model of the New Jersey State's health insurance policies. Worked with business teams to understand the compliances such as **HIPAA, GINA, HITECH, ACA, OMNIBUS**.
- Conducted **market research** to identify the appropriate insurance providers to meet the needs of the **target market**, analyzing factors such as **coverage, pricing, network, and customer service**.
- Conducted a comprehensive **System Analysis** by utilizing industry-standard methodologies to discern the current **AS-IS** process. Collaborated closely with **cross-functional teams** to gather requirements and design the **TO-BE** process, leveraging the Business Process Modeling tool, **Microsoft Power Automate**. Utilized expertise in process modeling and optimization to streamline workflows and enhance operational efficiency.
- Performed **GAP analysis** and **Cost-Benefit analysis** to establish the significance of the enhancement for the project.
- Led the **Business process re-engineering** efforts to optimize the **user interface (UI)** of the website, resulting in a more modern and **user-friendly** design, while also ensuring compliance with accessibility standards and user feedback.
- Facilitated **review** and **refinement** of high-level requirements and supported the PO in **prioritizing** them using the **Kano methods**. Estimated using **T-shirt sizing** and defined project scope, ensuring alignment with business objectives and stakeholder needs.
- Designed and created **Use Case Documents, high-fidelity and low-fidelity mockups and wireframes**, and using tools such as **Microsoft Visio** for the Development and Testing teams to track the business scenarios.
- Collaborated with stakeholders to design and develop the **Conceptual and Logical Models** for the system, which included identifying entities and their attributes, as well as defining relationships between them using **Entity-Relationship Diagrams (E-R)**. Utilized **MS Visio** to create and maintain the E-R diagrams, ensuring alignment with the business requirements.
- Facilitated **User Story Writing sessions** and determined **Acceptance Criteria** for various requirements during **PI Planning**.
- Participated in **ART (Agile Release Train) ceremonies** and bridged the communication between business and development team.
- Collaborated with the Product Owner to maintain the **Program Backlog**, which included managing **cross-team dependencies** within the Agile Release Train (ART). This involved identifying and managing inter-team dependencies, updating the Program Backlog regularly, provided support to the Product Owner to ensure that the Backlog was in line with the **ART's strategic goals**.
- Collaborated with the Product Owner to apply **vertical slicing technique** in decomposing features into smaller, independent user stories. Utilized **Agile DevOps practices** to facilitate the creation and maintenance of user stories, as well as the Program Backlog.
- Assisted the Scrum Master in conducting **ART ceremonies** such as **PI Planning, System Demo, and Inspect and Adapt workshops**, and assisted in creating **sprint reports** such as **Burndown/Burnup Charts and information radiators**.
- Created **REST API** documentation using **JSON format** and **Azure API Management**. Converted the documentation to the **OpenAPI specification (Swagger) format**. Executed end-to-end testing of **CRUD (Create, Read, Update, Delete)** operations to validate expected functionality. Conducted **testing in production and development** environments to identify environment-specific discrepancies. Verified API response **time and error codes** met performance standards and provided meaningful error messages.
- Created **SQL queries** using **joins, unions, group, order by, and aggregate functions** to extract data from **Azure SQL Database**.
- Reviewed existing **Stored Procedures** and tuned SQL queries for better performance to support application developers.
- Utilized **ETL process** using **Azure Data Factory (ADF)** for **mapping data** from different sources to the target and created **Data Mapping document** for the application after finalizing the attributes and tables with business users.
- Worked with **Development, QA, and Production Support teams** to communicate, verify, test the desired functionality, and assisted the Testing team in creating **Test Plan, Test Scripts, Test Cases, and Test Reports, and documented all test results**.
- Monitored and analyzed the performance and availability of the application and infrastructure using **Azure Monitor**, maintained the **agile board** and deployments using **Azure DevOps**, and documented various issues using **Confluence**.
- Created various **data visualizations** such as **ad hoc reports, summary reports, matrix reports, dashboards report** using **Power BI** to get insights such as **Conversion rate of visitors to customers, Website traffic and engagement metrics, Average order value, Average response time to customer inquiries**.

**Environment:** *Scaled Agile Framework (SAFe) 4.0, Microsoft Power Automate, MS Visio, Azure API Management, Azure SQL DB, Azure Data Factory, Azure Test/Monitor, JIRA (74), Confluence (6.2), Postman, Swagger, Power BI.*

**Max Bupa Health Insurance, Chennai**

**September 2019 - August 2021**

### **Business Systems Analyst**

Max Bupa Health Insurance realized the need to **create and execute a digital solution** to improve the **customer experience** and raise **customer engagement**. The task was to develop a **user-friendly mobile application** and **online portal** that would make it simple for users to **buy and manage their health insurance plans**, access a variety of health and wellness resources, and get specialized support and help. If this project were to be implemented successfully, it would **raise the company's operational performance and cost-effectiveness** while also increasing customer happiness and retention. After this product was released, it **increased company sales by 45%**

### Responsibilities:

- Conducted **Interviews and Brainstorming** with Business owners, Stakeholders, and **SMEs** to understand project scope, business process workflows, and **Requirements workshops** for **functional, non-functional requirements, Data, and GUI requirements**.
- Assisted **Project Manager** in creating **Project Charter, Work Breakdown Structure, and Critical Path Analysis**

- Developed **Business Requirement Document (BRD)**, **Functional Specifications Document (FSD)**, and **System Requirement Specification (SRS)**, **Project Charter** and conducted **Feasibility Analysis**, **Cost- Benefit Analysis**, and **Impact analysis**.
- Developed various UML diagrams like **Activity diagrams**, **Use Case diagrams**, and **Sequence diagrams** using **MS Visio**.
- Developed and managed project tasks utilizing **MS Project as a Project Management Software**, enabling **developers and testers** to effectively **comprehend** and **implement project requirements**. Continuous communication with the **project manager, developers, and testers** to make sure the requirements are clear and well-understood by the team. Handled the **Change Management process (CMP)** and had a **Risk Management Framework** in place and convinced the **Change Control Board (CCB)**.
- Reviewed **Test plans**, **Test scenarios**, **Test cases**, and **Traceability matrix** to ensure the functionality of software meets the requirements of the stakeholder, performed defect management and defect tracking through the **HP ALM** tool.
- Conducted comprehensive **regression testing** to validate **system functionality** and ensure its **quality and compatibility** and seamless **integration** with existing features without causing disruptions or issues, **mitigating the risk** of potential defects.

**Environment:** Waterfall, Native Script, JavaScript ES6, Deployd, Redux Architecture, Appium, HP ALM, Rally, MS Office Suite 2013, MS-Visio-2013

**Fortis Hospital, Chennai**

**August 2017 – July 2019**

**Business Analyst**

This project involved the **redevelopment** of a **financial application** to improve usability and efficiency in the process of submitting and reviewing expense reports for hospital employees. The application was rebuilt with a modern and intuitive **user interface** using the latest technologies and frameworks. The new solution resulted in a significant reduction in time and effort required to complete expense reports and improved accuracy and compliance with financial policies. Leading to a **30% reduction in processing time** and a **25% increase in accuracy**, leading to significant cost savings for the hospital.

**Responsibilities:**

- Conducted comprehensive **requirements analysis and impact analysis** to accurately capture and document **business requirements** in **Business Requirements Document (BRD)** and **Functional Specification Document (FSD)**.
- Conducted extensive **document analysis** and facilitated highly effective **Joint Application Development (JAD)** sessions and requirement workshops to expertly **elicit requirements** from **business stakeholders**.
- Developed comprehensive **Requirement Traceability Matrix (RTM)** and helped in defining **Entry and Exit Criteria** to ensure all requirements are captured, tracked, and met throughout the **project lifecycle**.
- Proficient in **SQL** with experience in creating **complex queries** using keywords such as **JOIN, GROUP BY, HAVING, UNION**, and subqueries to **retrieve, manipulate, and analyze** large datasets from **relational databases**.
- Created **Reports** and **Dashboards** in **Tableau** to present **system performance** and status to stakeholders in a meaningful way.
- Created, documented, and maintained **functional test cases** and other artifacts such as **test data, data validation, harness scripts, and automated scripts** using **HP QC**. Assisted in **Defect Life Cycle Management** and creating **Issue logs**.

**Environment:** Waterfall-Scrum Hybrid model, MS Visio, MS Office, SQL Developer, MS Excel (5), MS Access, Hp QC, Tableau

**Astral Limited, Chennai**

**June 2015 - May 2017**

**Associate Business Analyst**

This project objective was to optimize the traditional way of **reporting** order confirmation by implementing a web application, **static and Ad-hoc report** generating interface, and further by integrating Point-of-Sale (POS) system, provide the status of the ordered product. This project allows a responsive and efficient **Graphical user interface (GUI)**, marketing tactics, and electronic.

**Responsibilities:**

- Participated in the **JAD session** along with developers, business analysts, and other stakeholders to get a detailed understanding of the requirements. Participated in software **testing lifecycle** phases.
- Analyzed the requirements to understand testable requirements by interacting with various stakeholders.
- Updated **Requirements Traceability Matrix (RTM)** and participated in defining the Entry and the Exit criteria for all the phases in Software Testing Lifecycle.
- Assisted Sr. Quality Assurance Analyst to prioritize testing objects, document test environment details, and to carry out **Automation Feasibility Analysis**. Participated in determining efforts and cost estimates and baselined the Test Plan document after reviewing Test Strategy.
- Developed, documented, and maintained functional test cases and other test deliverables like **Test Data, Data Validation**, and **Test Scripts** using **HP Quality Center** and assisted in **Defect Lifecycle management**.
- Actively worked on Smoke & Sanity testing to analyze critical functionalities before and after updating the code.
- Executed and evaluated **GUI Testing, User Acceptance Testing**, and **Manual testing**.
- Monitored the **STLC** process and logged an issue in the Issue Log document and assisted in **prioritizing** these issues.

**Environment:** Waterfall, HTML, JIRA, CSS, SharePoint, SQL, SWOT, MS Excel, MS PowerPoint, HP QC, Confluence.
