

# Bhargavi Bikki

Sr. Full Stack Developer

Phone: (972) 514-6444

E-mail: [bhargavibikki1@outlook.com](mailto:bhargavibikki1@outlook.com)

Address: Houston Tx

Experienced **Full Stack Java Developer** with over 8 years of expertise in designing, developing, and delivering web-based enterprise applications for various domains. Mastered over a diverse technology stack, including **HTML5, CSS3, Bootstrap, JavaScript**, and **Java** across various versions (1.6 to 11). Expertise in crafting responsive and visually appealing user interfaces using **Angular** (2, 8, 11), **ReactJS**, and **jQuery**. Proficient in leveraging D3.js for dynamic data visualizations. Adept in server-side development with Java (1.8), **Spring Framework** (4.x, Boot, REST), and Hibernate (4.x, 4.2). Proven track record in building robust and scalable applications. Comprehensive knowledge of database management systems, including **Oracle** (11g, 12c), **PostgreSQL**, and **MongoDB**. Experienced in handling **SQL** and ensuring data integrity. Skilled in designing and implementing **RESTful** web services using **JAX-RS** and Spring. Hands-on experience with **Apache Kafka** for building distributed and event-driven systems. Proficient in deploying applications on various cloud platforms, such as **Amazon Web Services** (Elastic Beanstalk) and Microsoft Azure, utilizing **Docker** for containerization. Hands-on experience with continuous integration and delivery using tools like **Jenkins** and **Git**. Proficient in managing code repositories on **GitHub**. In-depth knowledge of implementing security measures in applications, utilizing **Spring Security, Okta Security API, and Swagger** for API documentation. Proven experience in **Agile** Scrum methodologies, fostering collaboration and adaptability throughout the development lifecycle. Effective communicator with a proven ability to collaborate in cross-functional teams. Familiarity with project management tools like **Jira, Kanban** for streamlined workflows. Demonstrated ability to quickly adapt to new technologies and frameworks, staying informed about industry trends. Proactive in learning and implementing emerging tools and methodologies. Contributed to the success of diverse projects, showcasing versatility in application development methodologies, from **Waterfall** to **Agile**. Implemented and maintained efficient message queuing systems.

## Skills

### Enterprise Java:

Servlets, JSP, JDBC, JMS, JPA, JavaBeans

### Frameworks:

Spring 4.x, Spring Boot, Spring Security, Spring Cloud – Spring MVC, Struts, Data JPA, Data MongoDB

### Databases:

Oracle, MySQL, MongoDB, SQL Server, Cassandra

### Web Services:

SOAP, RESTful,

### Version-Control:

### Languages:

Core Java, J2EE, C, C++, SQL, PL/SQL

### Front-end Stack:

HTML5, CSS3, JavaScript 2.0, jQuery 3.0, Bootstrap 4/3, AJAX, Angular 11, ReactJS, NodeJs,

### Cloud:

AWS, Azure

### Web/App Servers:

Apache Tomcat, WebLogic, JBoss

### ORM Frameworks:

Git, SVN, CVS, TFS

Hibernate 4.2, Java Persistence API, MyBatis

**Testing Tools:**

SoapUI, Postman, JUnit 4.x and Karma, Jasmine

**Build Tools:**

Jenkins, Maven, Gradle

**Operation System:**

Linux, Windows

**Containerization:**

Docker

## Work History

### Sr Full Stack Java Developer

Feb 2023 - Current

*NRG Energy, Inc., Houston, TX*

**Project Description:**

Contributed to an internal tool at NRG Energy Inc., for maintaining employee dashboards leveraging technical expertise, and designed robust system to prioritize secure data transmission and storage. The user-friendly interface which was crafted facilitated smooth customer interactions and optimized communication by delivering real-time responses.

**Responsibilities:**

- Actively participated in Design, Analysis, Development, User Acceptance Testing and System Testing and successfully followed **Agile methodology** in the Scrum Cycle model.
- Developed Interactive web pages using **Angular 11, HTML5, CSS3 and Bootstrap** as per user requirements.
- Created UI pages with **Angular Material** and **Angular Font Awesome**.
- Polished the Details pages using **Angular Material - Pagination** and **Filter**.
- Implemented form validation error messages, form reset, and search functions in components. Used **Angular Dependency Injection**.
- Created **Template-Driven Forms** and **Data-Binding** to display the related items.
- Deployed redirection links using **Routing** router navigation events to trace the events.
- Built the Admin management pages with **Angular Modules, Observable**, and **Services** to implement the **CRUD** functionalities such as viewing Items, add, update, and delete tasks in front and back-end.
- Created Account Login page using **Validation, Authentication, Router Module, Route Guard** and **Exception Handling**.
- Implemented **Authentication** and **Authorization** using local storage (token based).
- Produced and consumed centralized **Spring Restful Web Services** for Enterprise applications to consume in **JSON** format and in trusted client-server environment.
- Setup **Spring 4.x** by configuring jobs such as **Tasklets, Quartz Scheduler** and **Listeners** for error handling, report generation and service retry mechanisms on failures.
- Developed applications using **Java 11** and new features of java Epsilon garbage Collector, HTTP Client.
- Proficient in coding Core Java concepts such as **multi-threading, collections, generics**.
- Implemented pre-authentication and data base security using **spring security** and securing application access and **Spring Batch** for scheduling and maintenance of batch jobs.

- Used **Spring Annotations** to simplify the business logic for creating **Spring MVC RESTful web services** and **spring boot** Actuator to externalize configuration properties for different environments.
- Involved in developing code for obtaining bean references in **spring framework** using **Dependency Injection (DI)** or **Inversion of Control (IOC)** using annotations.
- Configured **Swagger-UI** registered **Micro service** with **Eureka** server to monitor service health check from **Spring Boot** admin console and dashboard.
- Deployed 4-layer structure for the project **Data-Access-Layer, Repository-Layer, Data-Business-Layer**, and **UI-Layer**.
- Used **MapStruct** using **Lombok Dependency**.
- Used **Spring Transaction** to provide a consistent programming model across different transaction APIs such as **Hibernate** and to Support declarative transaction management in application.
- Setup the continuous Integration (CI) process and continuous deployment (CD) jobs in **Jenkins** brew master instance, which reduces the time for the deployment of **micro services**.
- Used **Micro service** architecture with **Spring Boot** based services interacting through a combination of **REST** and **Apache Kafka** message brokers.
- Built **Micro services** using **spring boot**, **spring security** and created **Docker images using docker**.
- Leveraged **Amazon EC2 instances** for hosting and scaling applications and Integrated AWS cloud services for scalability, reliability, and security, including **AWS Lambda** for serverless computing, **AWS S3** for storage, and **AWS RDS** for databases.
- Configured **Amazon Elastic container registry (ECR)** for containerizing docker images and utilized **Elastic container services (ECS)** for containerized workloads.
- Created and configured **AWS Auto Scaling** to dynamically adjust the capacity of applications based on demand.
- Configured Postman to test the **Web API** functions.
- Configured and managed **AWS Lambda** functions to automate tasks and integrate with various services.
- Configured **Amazon CloudWatch** for monitoring AWS resources and applications.
- Configured **AWS SNS, AWS SQS** and established communication between API's services, resources, and application behavior in Realtime.
- Experience with **Swagger UI** creating modules), user interface and interactive concepts.
- Used **GIT** for version control, experience with **git-bash** and **git-hub** and **JIRA** for project management.
- Prepared **Junit and Test NG** test cases and executed as part of auto build process from **Jenkins Jobs**.
- Composed and executed **PostgreSQL** scripts to insert and update database and reporting.
- Monitored the error logs using **Log4J** and fixed the problems.

**Tech Stack:** HTML 5, CSS 3, Bootstrap, Angular 11, Java 11 JavaScript, JSON, Spring 4.x, Hibernate 4.x, Restful Web Services, Ionic, WebLogic Application Server, Amazon Elastic Beanstalk, S3, SQS, SNS, Docker, Kibana, Log stash, Soap UI, Jenkins, Git, Dom, Jax-rs, Junit 4.4, Log4j, Apache Kafka, PostgresDB, Oracle 11g, Agile Scrum.

**Sr Full Stack Java Developer**

*New York State Department of Labor, New York, NY*

**Mar 2022 - Feb 2023**

**Project Description:**

This project dealt with the development of a Culture and Recreation services page for the New York State Department of Labor website. Created an intuitive user interface featuring display cards for all services to enhance user accessibility and a better view. The project focused on ensuring that users could easily access and explore a diverse range of cultural and recreational services with detailed information, with all the necessary corresponding details of each service being included in each display card.

#### Responsibilities:

- Followed Agile methodology for developing application and involved in analysis, design, development, and testing phases of Software Development Life Cycle.
- Used **Microservices** to build individual components of the application and built the application on **Spring 4.x Framework**.
- Implemented **Spring Boot** flow to interact with different modules of the application and ensure efficient connectivity.
- Constructed and utilized **RESTful** services within distinct modules, incorporating serialization through **Spring REST and JSON**. Architected and implemented REST-based microservices utilizing **Spring Boot and Spring Data JPA**.
- Implemented **Microservices** based cloud architecture utilizing **Spring Boot** and Azure cloud services, including **Azure App Service, Azure Step Functions, and Azure Logic Apps**.
- Designed and developed custom message adapter components using **Apache Kafka** that allowed the message to travel through **Microservices** to base on Restful API utilizing **Spring Boot** with **Spring MVC**.
- Implemented **Spring Security** with **Okta Security API** to provide robust security for the application in the Azure cloud, leveraging **Azure Active Directory** for authentication and access control.
- Used **Spring AOP** to maintain the code clean and logic consistent and used pointcuts to call other classes methods according to advice.
- Involved in developing Thread safe blocks for multithread access and distributed transaction management.
- Secured **REST APIs** by implementing OAuth2 token-based authorization schemes using Spring Security in the Azure cloud, incorporating Azure API Management for API protection and scaling.
- Used front-end technologies **HTML5, CSS3, JavaScript** for interacting with the user interface and built components for the robust front-end **Single Page Application** built on JavaScript library **ReactJS**.
- Worked on **ReactJS Virtual Dom** and **React views, rendering using components** which contains additional components called **custom HTML tags**.
- Developed various screens for the frontend using **React JS** and used various predefined components from **NPM and Redux** library.
- Implemented **Redux** to resolve the application's **global state management**, especially for user login status.
- Created **reusable components** for the application by using **State and Props to pass data between parent and child component**.
- Experience with common front-end development tools such as **Babel, Webpack, and NPM**.
- Used **React-Router** to create a single page application. Applied **Router Guard** to deny unauthorized access and used **axios** for HTTP requests and **attached Bearer token** for secure usage of API.
- Utilized Hibernate 5 framework as the Object-Relational Mapping tool for persisting Java objects on Oracle 12c Database and explored Azure SQL Database for data storage.

- Architected and developed a new platform to modernize existing codebase using **DropWizard**, Spring Dependency Injection, **MongoDB** and **Hazelcast**.
- Debugged and modified SQL Stored Procedures, Triggers, Tables, Views, and User-Defined Functions in Azure cloud databases, utilizing **Azure SQL Database** for database storage and management.
- Created high level functional flow diagrams using **Microsoft Visio**.
- Utilized Azure services and frameworks like Azure Functions and **Azure Logic Apps** for design, documentation, testing, and deployment of REST APIs.
- Utilized **Swagger** framework for design, documentation, testing and deployment of REST APIs.
- Developed **Maven/Docker** build scripts and implemented Docker containers to create images for Azure cloud deployment. Employed **Azure Container Registry (ACR)** for container image management.
- Used **Azure Reporting Services** to send messages to multiple users and ensured they are delivered in an algorithmic way.
- Ensured high quality code by using **Agile XP / Pair Programming** approach and by using **SonarQube**.
- Extensively used **Postman** for testing REST webservice.
- Used **Git Hub** for versioning and **Log4j** implementation is done for logging.
- used **Jira** for Project Management and **GitLab** is used for issue and bug-tracking and Azure DevOps for continuous integration and continuous deployment (CI/CD) pipelines.

**Tech Stack:** Java 1.8, Spring 4.6, Spring Boot, Spring REST, Spring Data JPA, ReactJS, Oracle 12c, Apache Kafka, Spring Security, Okta Security API, Swagger, HTML5, CSS3, jQuery 3.0, Bootstrap 4, Java Script 2.0, Angular 2, D3.js, CloudBees, Maven, Docker, JUnit 4.0, Mockito, Azure SQL Database, ACR , Azure Reporting Services, Git Hub, Log4j, Jira.

## Full Stack Java Developer

Jun 2019 – Dec 2021

*Client: HDFC Bank, Visakhapatnam, India.*

### Description:

This feature empowered customers to opt for additional verification layers, such as SMS codes or app-based authentication, thereby fortifying the security of online transactions. By seamlessly integrating 2FA into the existing online banking system, the project contributed to HDFC Bank's commitment to cybersecurity and delivered a safer, user-friendly digital banking experience.

### Responsibilities:

- Involved in all phases of the Agile Software Development Life Cycle (SDLC), creating use case, class, and sequence diagrams during the design phase.
- Prepared Technical Design documents through **UML** diagrams using Microsoft Visio.
- Used the core-concepts of java such as **Stream API**, **Exception-handling**, and **Collections** for the development of business logic.
- Implemented **Microservices** architecture for the creation of the independent components Using **Spring Boot** for consuming **RESTful** services.
- Configured **Docker** for creating images of microservices and utilized **Amazon Elastic Container Registry (ECR)** for storing images.
- Developed Microservices with **Spring Eureka** to retrieve API routes for the entire cluster. Using this strategy each spring service in a cluster can be load balanced and exposed through one **API gateway**.
- Created and consumed **SOAP** web services, for secure retrieving and consumption of data.
- Used Microservices architecture with **Spring Boot** based services interacting through a combination of REST and **Apache ActiveMQ** message brokers.

- Integrated JAVA EE technology **Spring MVC** with **Hibernate** for the persistence layer access for mapping to the tables in the **Oracle 12c** Database.
- Utilized **Spring AOP** techniques to manage Data Access Exceptions during transactions.
- Integrated the **Hibernate 4.0.6** with Spring using the **JDBC** Driver Manager and integrating Hibernate second level cache for caching the user data.
- Designed and implemented a Single Page Application in **Angular 8** and the presentation layer using **HTML5, CSS3, JavaScript**. Used **Node.js** for server-side code and **Express.js** as the framework.
- Used front-end technologies **HTML5, CSS3, JavaScript** for interacting with the user interface and designed responsiveness in the web application using **Bootstrap 4**.
- Built prototype for various required services such as Scheduling, Logging and Notification service using third party Node.js based JavaScript library.
- Used **Apache Camel** as the integration pattern to communicate between different enterprise components.
- Conducted **CRUD** operations like Update, Insert and Delete data in **NoSQL** database **MongoDB**.
- Used **Jenkins** for Continuous Integration and Deployment and deployed the application on **EC2** instance using **Docker** Container.
- Implemented **JMS** using **Apache ActiveMQ** for messaging and queues.
- Utilized **log4j** for logging, debugging and information extracting purposes.
- Worked in a **Test-Driven Development (TDD)** by conducting regression testing and used **JIRA** bug tracking tool and **Jasper** for report generation.
- Participated in the **Agile** environment according to the Sprint deadlines and meetings.

**Tech Stack:** JAVA-1.8, JAVA EE, Spring 4.0, Spring Security 3.2, Spring Boot, Spring AOP, Spring Eureka, Hibernate 4.0.6, JSPS, Apache Tomcat 8.0, MongoDB, Hazelcast, SQL, Apache Karaf, ZUUL, HTML5, CSS3, Bootstrap 4, Angular 8, Express.js, Node.js, REST API, Apache ActiveMQ and Amazon Web Services (Elastic Beanstalk)

### Full Stack Java Developer

Mar 2017 - Jun 2019

*Metanoia Software Solutions, Hyderabad, India*

#### Description:

The company excels in developing custom software applications, offering services such as application design, development, and deployment. The aim of this specific entity within the project would have been to create a streamlined process for users to upload, organize, and access documents, enhancing collaboration and data management within the organization. This feature would contribute to improving overall workflow efficiency and ensuring the integrity and accessibility of critical business documents.

#### Responsibilities:

- Used **Agile** methodologies for iterative and adaptive development, actively participating in sprint planning, daily stand-ups, and sprint reviews to ensure project alignment with business goals.
- Utilized **Spring MVC** framework to design and implement scalable and modular web applications.
- Developed dynamic and responsive user interfaces using **JSP, HTML, CSS, Bootstrap**, and **jQuery**, ensuring a seamless and visually appealing user experience.
- Implemented core functionalities in **Java 1.6**, ensuring coding standards. Utilized Collections, Serialization, Generics, Annotations, and Exception Handling for Back-End logic.
- Integrated **message queuing (MQ)** for asynchronous communication, implemented comprehensive logging mechanisms.

- Developed and maintained unit tests using **JUnit**, contributing to the implementation of a robust and reliable codebase.
- Developed and optimized **SQL** queries for **Oracle databases**, ensuring efficient data retrieval and manipulation.
- Created and maintained database objects such as stored procedures, tables, views, sequences, cursors, and triggers.
- Utilized **ANT** for build automation, ensuring consistent and reliable build processes for the application.
- Deployed the application on to **WebSphere** application server.
- Managed source code versioning and collaboration using **GitHub**, ensuring proper branching, merging, and code review processes.

**Tech Stack:** JSP, HTML, CSS, Bootstrap, jQuery, Java 1.6, Message queuing, Junit, SQL, ANT, WebSphere, GitHub, Agile.

## Software Engineer

Aug 2015 - Dec 2016

*Healthcare IT, Hyderabad, India*

### Description:

My responsibilities included creating an intuitive and user-friendly interface for both healthcare providers and patients, ensuring seamless integration with other components of the EHR system. The primary goal of this feature was to streamline the appointment management process, optimize healthcare resource utilization, and enhance the overall efficiency of the healthcare facility.

### Responsibilities:

- Actively participated in Design, Analysis, Development, User Acceptance Testing, and System Testing, successfully following the **Waterfall methodology** in the project lifecycle.
- Designed and developed the presentation tier as **HTML, CSS, JSPs** using **Spring MVC** framework.
- Used **JavaScript** for validations on the client side, **AJAX** for intensive user operations.
- Developed web applications Using **Java 6** and **Spring MVC**, incorporating essential functionalities, and adhering to the established coding standards.
- Implemented **JDBC** to establish connections with **MySQL** databases, data retrieval for application development.
- Developed comprehensive unit tests using **JUnit** to validate the functionality.
- Used **Postman** for **API testing**, ensuring the seamless and efficient validation of API functionalities to guarantee optimal performance and reliability in software development.
- Deployed applications to **WebLogic Server**, reliable application hosting for seamless user access and best performance in a production environment.
- Worked with **GitHub** version controlling system performing operations like pull requests, branch merging.

**Tech Stack:** HTML, CSS, JSPs, JavaScript, AJAX, java 6, Spring MVC, JDBC, MySQL, Junit, Postman, WebLogic Server, GitHub, Waterfall methodology.

## Education

### Master of Science: Computer Science

*University of Houston - Clear Lake - Houston, TX*

**Bachelor of Technology: Computer Science and Engineering**  
*K L University – Vijayawada, India*
