

Bhavani G

Warren, NJ 07059

bhavanigwk4ya_y7r@indeedemail.com

+12017088568

Detail-oriented and highly motivated Business Systems analyst with 8 years of experience and demonstrated ability to lead and manage complex projects in the healthcare, insurance, and life sciences industries utilizing SDLC techniques such as waterfall, waterfall-agile, and agile including Kanban, SCRUM, and SAFe.

Professional with extensive knowledge of decision support, EHR implementation, and Medicaid care programs. Committed to continuous professional growth and research through business process reengineering, business process modeling, and business analysis. Deconstruct complicated challenges into manageable team responsibilities.

- Leveraging a profound understanding of the healthcare industry, I bring a wealth of expertise in various critical areas, including Claims processing, EHR, EMR, EDI, FHIR, HIPAA, GMP, GDP, GLP, cGMP, GXP, GPvP, FDA, EMA, HITECH, CTMS, HEDIS, and EDI standards (4010 & 5010). My proficiency extends to ICD-10-CM and ICD-10-PCS.

- Possessing a deep understanding of healthcare programs, including Medicare, Medicaid, Managed Care Plans, HMO, PPO, POS, NPI, CCDA, HCPCS, LIMS, FHIR APIs, CMS regulations, GDPR, CCPA and various Data Governance principles crucial for regulatory compliance. Proficiency also extends to X12 EDI transaction codes, such as 270/271 (inquire/response healthcare benefits), 276/277 (Claims status), 834 (Benefits enrollment), 835 (Payment/remittance advice), and 837. Proficient in healthcare and pharmaceutical standards, including HL7, LOINC, SNOMED, TriZetto FACETS Implementation,

- Proficient in performing in-depth analyses including GAP analysis (As-is & To-be), risk assessment, impact assessment, market evaluation, competitor profiling, cost-benefit assessment, Root-cause investigation, Clinical governance & compliance scrutiny, Risk Identification, SWOT analysis, ROI assessment, and technical feasibility through PESTLE analysis of business processes.

- Highly skilled in effectively communicating with SME's such as key physicians, office personnel, head nurses, Business & technical Stakeholders, Clinical and operations teams, Developers, Architects, QA teams.

- Demonstrates exceptional written and verbal communication abilities, adept at presenting prototypes and delivering release demos. Responsibilities include coordinating and conducting requirement elicitation sessions, such as surveys, interviews, brainstorming sessions, focus groups, JRM sessions, interface assessments, observations, stakeholder evaluations, and business process reengineering. These sessions aim to gather system functional, non-functional, data requirements, graphical user interface (GUI) specifications, and business needs. Proficiently drafts high-quality documents such as BRD, FRS, SRS, risk registers, User stories with Acceptance criteria, use cases, Data Flow models, change request documents, project charters, readiness documents and WBS.

- Proficient in generating potent modeling artifacts utilizing UML (Unified Modeling Language) diagrams including use case diagrams, activity diagrams, class diagrams, sequence diagrams, and business process flow diagrams, utilizing tools such as MS Visio, Lucid Charts,

Visual Paradigm, and Balsamiq. Also adept at preparing low and high-fidelity mockups and wireframes using Figma.

- Actively collaborates with Product Owners, Cross-functional Teams, and Scrum Masters in agile Ceremonies including Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective. Participates in Sprint Zero, Product Vision meetings, Backlog Grooming, and Refinement sessions based on DEEP criteria for the product backlog. Contributes to the development of Product Roadmaps priorities utilizing DEEP & DIVE methodologies. DOD, DOR, user stories and acceptance criteria using INVEST & SMART principles. Proficient in prioritization techniques such as MOSCOW, Kano, relative skeleton and value-based methods for effective project planning.
- Assists Product Owners in defining scope, objectives, EPICS, user stories in Gherkins format, Minimum Viable Product MVP, MMF and establishing KPI's.
- Possesses extensive knowledge of dimensional data modeling, database management, cloud data migration, data integration, data warehouse implementation, MDM, data profiling, STAR & Snowflake schemas, Operational Data Sources (ODS), and data warehouse architecture. Proficient in analysis using ETL tools such as Informatica, DataStage OLAP and OLTP.
- Proficient in API testing and documentation using Postman, Swagger for requests and responses in XML and JSON formats. Well-versed in REST API, SOAP API, and Web services for CRUD operations using HTTPS within a Three-tier architecture. Possesses hands-on experience with MySQL, PostgreSQL for DDL, DML, TCL operations. Proficient in writing queries for selection, joins, unions, stored procedures, triggers, functions, group by, and order by, as well as creating views.
- Assists the QA team in the STLC by creating RTM, Test Plans, Test Scenarios, Test cases, UAT test scripts. Conducts various tests including UAT, System Integration Testing (SIT), Sanity tests, Smoke tests, Acceptance tests, Performance tests, Regression tests, Beta testing, and unit tests. Utilizes bug detection and tracking tools such as HP-ALM, other ALM tools, and Selenium.
- Proficient in using project management and issue tracking tools like Azure DevOps, JIRA, Confluence, SharePoint, and MS Project. Creates diverse reports and dashboards, including heat maps, bar graphs, histograms, pie charts, pivot tables, and interactive MOLAP reports using Tableau, Power BI, Cognos BI, MS Office suite (Excel, PowerPoint, Access), and AWS Quick Sight to gain valuable business insights.

Work Experience

Sr. Business Systems Analyst

GSK - Warren, NJ

May 2022 to Present

Patient support program

The scope of the project is to implement Patient Support Program (PSP) a comprehensive initiative aimed at enhancing the overall patient experience and ensuring optimal healthcare outcomes for individuals receiving the pharmaceutical products and services. This program encompasses a wide array of critical components designed to streamline processes, facilitate access to treatment, and provide personalized support to patients.

Roles and Responsibilities:

- Ensuring compliance with HIPAA, GDPR, FDA regulations, state-specific healthcare rules, HL7 and FHIR interoperability standards, Medicaid and Medicare requirements, pharmacovigilance practices, robust data governance and respectful handling of patient consent. Involved in harmonizing the PSP with these regulations and working closely with legal and compliance teams to guarantee legal adherence, data protection, and patient confidentiality.
- Networked with SME's and extensive Document Reviews to get an in-depth knowledge of the Business Processes to aid BPI to define the AS-IS business flow and then collaborated with team to design the TO-BE system. Conducted Gap analysis to ascertain the gap between AS-IS and TO-BE system.
- Conducted extensive interviews, focus groups and surveys to gather detailed requirements for the PSP, prioritizing patient-centric features, functional requirements into GUI. Utilized BPMN and Data Integration Diagrams to depict patient journeys and data flows. Developed comprehensive data flow diagrams to illustrate data movement within the PSP, aligning with patient experience optimization.
- Collaborated with UX/UI designers to create mockups, wireframes, and system architecture diagrams tailored for patient interactions, following patient experience enhancement principles. Utilized Unified Modeling Language (UML) diagrams to depict system components and patient engagement processes, focusing on priority areas for patient support.

Conducted story writing workshop and assisted the product owner in writing user stories, acceptance criteria, framing Definition of Done (DOD), also assisted PO in prioritizing the user stories and defining MVP.

- Sliced user stories using Vertical Slicing Techniques, Prioritized user stories using techniques such as MoSCoW, Kano method and Estimating user stories using Relative Estimation techniques like Planning Poker. Participated in scrum ceremonies and created burn up and burn down charts and monitored the project progress.
- As a part of the Collaborative team, actively participated during the Scrum Ceremonies, in the Product Vision meeting along with the Scrum Master, Product Owner, and the development team to understand the desired features of the system.
- Performed various OLAP operations such as Slice, Dice, Pivot, Roll-up, and Drill-down to understand the data in different dimensions for decision making.

Actively involved in maintaining the Scrum board to track the different issues and bugs using JIRA. Responsible to use Business Intelligence tools and create interactive dashboards such as heat maps, bar graphs, pie charts and pivot tables using Tableau and Excel for reports. I was actively involved in reading data from varied file types to create standard and ad-hoc reports. Created API requirement document using Swagger and performed API testing using Postman to check if the APIs are returning the data in JSON, XML format which is required for the workflow.

- Ensured that the integration of IOT device data complied with relevant regulations, such as GDPR or HIPAA, and addressed data privacy concerns.

Maintained documentation for compliance audits.

- I assisted the QA team to develop Test Plans and Test Cases for UAT, Black-box Testing, Functional Testing, various System Testing, Integration Testing, Regression Testing, Security Testing, Load/Stress Testing, and Performance Testing in both manual and automation testing environment to validate it against business requirements. Defect Tracking and Bug Reporting was performed using HP ALM.
- Documenting current business processes to assess and develop business requirements for the future system.
- Responsible for Answering the clarification questions from development team and liaisons with the business to obtain further clarification when necessary.

Coordinated and communicated with patient referrals and access personnel, including managers, representatives from other business entities and physician's offices.

Environment: Agile/Scrum, salesforce health cloud, Veeva, Mulesoft, Postman, Miro board, Jira (v.7.0), Confluence (V.6.4), Swagger, Tableau, Cucumber (V.3.0)

Sr. Business Systems Analyst

Change Healthcare – Claims Xten - Nashville, TN

June 2020 to January 2022

Automated Claims Adjudication and Fraud Detection System

This project focuses on modernizing and automating the information extraction process from unstructured notes and implementing real-time fraud detection using machine learning techniques. Additionally, it aims to optimize the processing of medical claims through scalable and cost-effective machine learning automation.

The project involves the development of a streamlined claim adjudication workflow that assesses the authenticity, correctness, and coverage validity. By achieving these goals, the project aims to significantly enhance efficiency, reduce processing time, elevate customer satisfaction, mitigate financial risks, and proactively prevent fraud within the healthcare system.

Roles and Responsibilities:

- Played a pivotal role in designing future state processes in compliance with HIPAA 5010, HL7, GDPR, CCPA, and data governance principles, focusing on claims transactions related to Medicare, Medicaid, and X12 EDIs such as 837, 835, 270 and 271, as well as CMS guidelines. Orchestrated vital interactions throughout the Software Development Life Cycle
- Conducted extensive analysis of extensive claims fraud datasets, meticulously identifying patterns, trends, and anomalies. Expertly compiled, interpreted, normalized, and analyzed substantial data from diverse source systems, encompassing Facets, Master Data Management, ICD-10 CM & PCS, CPT, TR3, Companion Guide, and CRM SOA. Collaborated closely with domain experts, particularly for claim files of 835 and 837.
- Demonstrated exceptional decision-making abilities in analyzing complex situations, devising solutions, and recommending appropriate actions. Facilitated testing meetings and excelled as a liaison between application groups, external agencies, and offshore teams. Spearheaded process improvement initiatives by leading process mapping sessions with key stakeholders. Identified gaps in the current state and employed Work Breakdown Structure (WBS) to devise high-value, low-risk process improvement solutions.
- Conducted thorough market discovery activities, encompassing research, competitive landscape analysis, CMS guidelines, SLAs, and business process reengineering. Proactively drove change initiatives to support profitable underwriting growth while fostering collaboration with underwriting operations, legal, and security and compliance team.
- Partnered closely with stakeholders to elicit and prioritize business requirements. Facilitated this process through brainstorming, focus groups, interviews, and transformed these requirements into various artifacts such as INVEST user stories with acceptance criteria in Gherkin format, use cases, and contributed to the product roadmap.
- Engaged in demonstrations, presentations, and discussions with clients while collaboratively working with cross-functional teams. Employed use case diagrams, BPMN, and UML diagrams to create a shared vision of success. Presented mockups and wireframes utilizing tools like MS Visio, effectively translating customer requirements in MS Project.
- Provided invaluable assistance to the RTE and Product Owner in shaping the product vision, scope, and BRD. Actively participated in PI planning, conducting

EPICS, User Story Writing sessions, determining Acceptance Criteria with SMART metrics and DOR.

- Played a pivotal role in ART ceremonies, including Inspect & Adapt events, system demos, PI reviews, and retrospectives. Acted as a liaison between business and development teams for continuous delivery pipeline (CDP). Expertly used

Value-Based Prioritization and T-shirt sizing techniques.

- Formulated storage requirements and data retention policies in collaboration with data scientists, defining data validation rules and metric creation for processing claims for the implementation of the fraud detection model using ML.

- Collaborated seamlessly with QA and developers to craft API test plans and test cases for functionality, performance, and security testing using Postman.

Proficiently understood API specifications, authentication methods, endpoints, and request & response formats (JSON) and created concise and accurate documentation using Swagger while providing guidance on API usage.

- Leveraged MS Excel (utilizing functions like VLOOKUP, COUNTIF, PIVOT) and executed MS SQL queries (including select, update, and Joins) to perform in-depth claim data analysis. Proficiently handled data validation to identify null values and inconsistencies. Utilized queries to integrate data and create metrics for

Analytics for Health, leveraging Azure services such as Azure Data Factory and

Azure Synapse Analytics to unify the data model.

- Meticulously crafted the Requirements Traceability Matrix in close collaboration with QA, ensuring comprehensive mapping of requirements to test cases for thorough validation. Worked alongside the Test Lead and Eligibility Determination specialists to assist in documenting test plans, test cases, and scenarios.

Generated SIT and UAT test cases, along with UAT test data to capture edge cases.

Actively participated in internal and client UAT meetings, providing support for requirements-related queries. Additionally, executed internal sanity testing.

- Efficiently employed SharePoint as a centralized hub for team and ART communication, creating version-controlled pages, documents, and libraries for seamless sharing across teams. Expertly managed daily routines with workflows and synchronized files on the Azure cloud.

- Skillfully designed compelling and interactive dashboards using Power BI to present insights and KPI reports, including potential fraud distribution, ad-hoc reports, claim processing days versus fraud, geographic analysis, and claim amount versus fraud.

Environment: SOA, Agile-SAF, SDLC, MS project, Salesforce CRM, MS Visio, MS

Office, MS Excel, Swagger, Postman, Selenium, Facets, Share point, Azure services

(Azure DevOps, Azure functions, Azure API management), Power BI, ALM

Business System Analyst

Indiana Dept. of Health - Indianapolis, IN

June 2018 to May 2020

Clinical decision support system (CDSS) based on pharmacogenomics

The project aims to create a Personalized Medicine Application for healthcare providers. It integrates decision support and precision medicine, improving diagnoses, treatments, and risk assessment. This enhances patient care, reduces burdens, and boosts revenue. The project addresses barriers like data handling and workflow efficiency, ensuring compliance. Implementation leads to fewer adverse events, higher satisfaction, shorter hospital stays, and cost savings.

Roles and Responsibilities:

- Secured the thorough Protected Health information (PHI) by understanding of HIPAA, GDPR, CCPA, data governance principles Transactions and Code Sets (PGkb,

RxNorm), Genotype-to-Phenotype (G2P), CPIC Implementation, HL7, messages and FHIR, which facilitated seamless integration of Health information exchange (HIE), CTMS, with EHRs, Pathology Information system, patient portal could be ensured in a secured for clinical operations in SDLC for HL7.

- Conducted Gap Analysis (As-Is and To-Be) for comparing vendor provided engines and identifying areas of improvement, market analysis to find out competitive landscape of DSS. Cost-benefit analysis for finding cost efficiencies, risk analysis and feasibility studies for finding out the necessary time and resources required. Worked on Design, Development, and Implementation (DDI) end-to-end, for configuration specifications and business analysis requirements for SOA.

- Gathered business requirements to integrate EHR & DSS by driving Joint

Requirements Meeting (JRM) sessions, interviews, surveys, focus groups, high fidelity prototypes, Interface Analysis. Elicited clinical, regulatory, and commercial requirements from SME, stakeholders, vendors, cross-functional team, offshore teams, utilized decision trees to compare alternative options in triple constraints (Budget, Time & Scope) in MS Project.

- Documented artifacts including technical and functional requirements in requirements specifications document, EPICS, User stories with acceptance criteria in Gherkins format, Use cases with alternate flows, basic flows, preconditions, post conditions, vision & scope documents, implementation plans, KPI's, common technical issues in CRM.

- Defined GUI requirements by creating high & low fidelity mockups & wireframes using Figma with the several key factors such as, user requirement, hospital needs and patient's clinical health records. Acted as a key liaison to business stakeholders, developers, and architects by translating business into functional requirements and approaches for developers using UML diagrams WBS, BPMN 2.0, Activity diagram creating in MS Visio.

- Participated actively in all ART ceremonies including backlog grooming, sprint planning, daily stand-up, review, and retrospective. Assisted product owner in defining acceptance criteria for user stories in SMART criteria DOR, DOD.

Prioritization of user stories, tasks were conducted using MOSCOW and estimation sessions were conducted using planning poker until everyone on the team reaches consensus.

- Involved with Product Owner, backlog grooming, release planning Assisted scrum master tracking progress using sprint burndown, burnup, and control charts.

Contributed to MVP/MRF which aided in release planning.

- Facilitated code review sessions with Developers to understand the written code and various Machine Learning Algorithms ensured the dev teams' adherence to project requirements and industry best practices. Used Postman and Swagger to test and document REST API's CRUD operations (GET, PUT, POST, DELETE) in Production and

Development environments and verified that the response time and error codes supporting system requirements.

- Worked with Data engineering teams for operational data issues, data validation, metric creation, ETL process, helped in Data profiling of various sources and load them to pharmaceutical knowledge base for analytics of data platform.

- Used MS Excel (VLOOKUP, COUNTIF, PIVOT), MS SQL, PL/SQL statements, performed transformation rules, aggregate functions, various operations like SELECT, GROUP, JOIN, created and used stored procedures and views.

- Created and executed internal testing plans, technical user manuals based on business requirements before sending the solution for UAT. Trained Junior BA in conducting testing with users, creating test cases for tracing requirements.

- Coordinated with Business users to get a sign-off on the delivered solution by assisting them through UAT and SIT and by providing the training. Assisted QA team in Sanity testing, acceptance tests, integration

testing and regression testing by documenting test plans, test cases, Test scenarios, Test reports and Requirements

Traceability Matrix (RTM). Run Test Cases in Test Environment using Manual testing ensuring solutions meet business requirements in ALM.

- Continuously communicated with project team members to track requirements in JIRA to discuss and to fix defects and use its various functionality to create user stories and managed requirements repository using SharePoint.

- Generated Ad-Hoc reports, standard static reports BI reporting, compiled them into an interactive dashboard & storyboards having graphs like Pie Charts, Scatter

Charts, Histograms, Waterfall Charts, Bar Charts, Pivot Charts, and Combo Charts using Tableau. Through the reports presented insights and KPI's for key metric reports like Lead time reports, cycle time reports, WIP reports, Cumulative Flow

Diagram, Control Charts, Burndown Chart.

Environment: CTMS, Agile-SCRUM Environment, SDLC, MS Visio, Figma, Postman,

Swagger, AWS Cloud front, AWS API Gateways, AWS Lambda, AWS SNS, MS-SQL, MS Excel,

JIRA, Confluence, Tableau, ALM.

Business Systems Analyst

Geisinger - Danville, PA

February 2017 to April 2018

The project aims to enhance the existing Electronic Health Record (EHR) software by seamlessly integrating it with the current Laboratory Information Management

System (LIMS) using the HL7 FHIR (Fast Healthcare Interoperability Resources) protocol. This integration initiative focuses on reducing or eliminating manual interventions, such as the manual mapping of patient records with their corresponding lab reports and streamlining the sample management process.

Roles and Responsibilities:

- Facilitated workshops and JRP sessions to help stakeholders align their vision with future trends. Demonstrated how the project would support the evolving needs of healthcare facilities and improve existing business processes impacted by technological changes.

- Conducted cost-benefit analysis for potential costs, market analysis for industry trends & patterns, and identified potential risks and developed strategies, finding the current CMS guidelines, critical IT issues by conducting

Gap Analysis.

- Collaborated with business stakeholders using online JAD/JRP sessions, web-surveys to gather requirements and understand reporting, analysis needs.

Connected with technical teams to ensure alignment with the project goals.

- Translated functional, non-functional requirements into technical specifications, use cases, user stories with acceptance criteria, RTM using JIRA &

Confluence on an offshore basis app.

- Created BPMN, Data integration diagrams, UML diagrams, flow charts, BPMN using

Lucid charts for better end-to-end understanding of business requirements in MS

Visio.

- Assisted scrum master in facilitating time-boxed SCRUM ceremonies and in creating sprint reports (Burndown/Burnup Charts, information radiators) in JIRA.

Helped Product owner in Roadmap planning, prioritize product backlog items using

MOSCOW, Vertical slicing epics and scrum team in estimating story points by planning poker.

- Defined data entities, attributes, relations, developed conceptual, logical, and physical data models to bridge the gap between source systems, data lake teams, and the data warehouse structure. Worked closely over ELT (Extract, Load, Transform) ensure data transformations and integrations with design. Created data dictionaries, metadata documentation.
- Worked under tight deadlines independently on strategic issues with users, trained junior BA for working with various teams.
- Worked on API 's to integrate data such as FHIR API, HL7 API to creating API specifications, defining data models, and identifying security requirements, setting up O-Auth2.0.
- Assisted testers in UAT, SIT in analysis of the requirements traceability matrix in ALM by creating test cases and plans in Excel. Tested and Documented API using Postman and Swagger checking all CRUD-GET, POST, PUT, DELETE.
- Developed complex MS SQL queries using Joins and stored procedures to support reporting and analysis requirements.
- Documented Report specification document (RSD). Created interactive dashboards and charts to analyze the data in real time, interpreting trends and patterns using Tableau. Trained stakeholders in using dashboard for business insights in future.

Environment: SOA, HIPAA, Medicaid, Medicare, CRM, GDPR, HL7, Agile-Scrum SDLC, MS Visio, Informatica PowerCenter, Facets, Python, Redshift, Postman, Swagger, REST API, MS SQL, MS Excel, JIRA, HP-ALM, Tableau.

BI Reporting Analyst

Infor India Private limited - Hyderabad, India.
July 2015 to January 2017

Healthcare Analytics Platform for Data-Driven Decision-Making

Healthcare organizations, including hospitals, are committed to enhancing patient care, operational efficiency, and financial sustainability. This project aims to develop a healthcare analytics platform that facilitates robust reporting and efficient ETL (Extract, Transform, Load) processes. The platform's primary goal is to provide actionable insights to support data-driven decision-making in a healthcare setting.

Roles and Responsibilities:

- Collaborated with stakeholders across the healthcare organization to gather project requirements, using interviews and surveys to understand business needs for data-driven decision-making and reporting.
- Engaged in Kanban framework activities, including collaborative planning sessions. Assisted in prioritizing user stories and defining work items for data integration and reporting improvements. Actively participated in daily standup meetings to provide updates on tasks, address challenges, and learn from the team's more experienced members.
- Contributed to the development and maintenance of healthcare reports and dashboards using BI tools. Assisted in designing and visualizing data to support healthcare professionals and administrators. Worked on data analysis and modeling tasks to help structure data for reporting purposes, in alignment with reporting requirements.
- Assisted the ETL team in data extraction, transformation, and loading processes, contributing to the accurate and efficient integration of data. Worked with data engineers in optimizing data queries used in reports and dashboards to ensure smooth performance and also in creating SQL queries and scripts for data extraction and reporting purposes.
- Learned and implemented data visualization best practices to effectively present data for user understanding. Participated in quality assurance and testing activities for reports and dashboards to ensure data accuracy and reliability.

- Provided support to end-users for understanding and navigating reports and dashboards, contributing to user training efforts. Complied with data privacy and security standards in data integration and reporting work, under the guidance of senior team.

- Assisted in administrative tasks, such as assisting in ETL job development and deployments, as well as data refresh activities to maintain data accuracy.

Assisted in client interactions by attending meetings and learning from more experienced team members in understanding specific reporting needs. Writing scripts (Bash, PowerShell, Python) to automate repetitive tasks is a fundamental approach. Created scripts to perform tasks like file management and system configuration.

- Worked on various reports Patient Demographics Report, Financial Performance Report, Operational Efficiency Dashboard, Clinical Quality Report, Patient Readmission Analysis, Patient Satisfaction Scorecards.

Environment: Kanban, IBM data stage, IBM Cognos report studio, Windows, MS-SQL server.

Business Analyst

May 2014 –

Apr 2015

Claims Processing Efficiency Enhancement for Healthcare

High Mark Health, India

The project focuses on Enhancing the efficiency of claims processing for a Managed Care Organization specializing in healthcare insurance services. The primary objective is to reduce errors, enhance claim quality, and address challenges related to underpayments, overpayments, and slow processing. Through this initiative, we aim to optimize processes to ensure accurate, efficient, and streamlined claims management, ultimately delivering an improved experience for both policyholders and healthcare providers within our network.

Roles and Responsibilities:

Assisted in scheduling and participated in interviews with Subject Matter Experts

(SMEs) and stakeholders to understand project requirements. Supported the Sr. BA in documenting the existing system by performing document analysis and capturing insights into the business workflow.

- Helped identify both business and technical requirements by participating in discussions with SMEs and the project team.

- Worked with the Sr. BA to create UML diagrams, such as Use Case, Activity, and Sequence diagrams, using tools like Lucid Chart to assist in clear visual representation.

- Assisted in identifying technical and business risks related to the project and supported the Sr. BA in developing risk mitigation strategies. Under the guidance of the Sr. BA, contributed to analyzing specific areas within claims processing, such as Benefits Eligibility & Enrollment, adjudication, and reimbursement.

- Assisted in monitoring EDI transactions, such as X12 EDI 835 and X12 EDI 837, through Apache Kafka pipelines as directed by the Sr. BA. Aided data engineers in handling Metadata Management policies and data regulation compliance working closely with the Sr. BA. Collaborated with the team on the implementation of

TriZetto Facets Core Administration, following the Sr. BA's guidance. Under supervision, contributed to analyzing inbound and outbound interfaces and extensions to the FACETS claims processing system. Participated in the testing of

FACETS functionalities, working alongside the Sr. BA.

- Worked with data from the system to perform basic data analysis and assisted in creating reports as directed by the Sr. BA, using tools like Tableau for data visualization.

· Utilized collaboration tools like Confluence for sharing project-related information and updates, following the Sr. BA's lead. Collaborated in managing various issues including Epics, User Stories, Bugs, and Tasks, with guidance from the Sr. BA. Became familiar with the project environment and tools, such as Scrum, JIRA, Windows, and others, by actively participating and learning from the Sr. BA.
Environment: Waterfall, JIRA, FACETS, confluence, share point, MS Visio, MS word, MS Excel, MS Access, MS Office Suite, MS SQL, HP-ALM, Tableau.
