

Summary

Talented, results-driven enterprise solution architect with 15+ years of experience leading digital transformation initiatives. Extensive development experience, proven ability to design and implement enterprise-class, scalable, cloud-native applications and microservices. Experience leading cross-functional teams, mentoring developers, and collaborating with stakeholders within a scaled agile environment. Seeking to leverage deep technical expertise and strategic leadership to drive innovation and deliver high-impact solutions.

Skills Summary

Public & Private Cloud Environments & Services	Amazon AWS, Amazon SQS, Microsoft Azure, Azure APIM, Google GCP, HerokuAWS - EC2, S3, Lambda, RDS & Aurora (Redis, Oracle MySQL & Oracle), SQS, S3, ElastiCache, Azure Logic Apps, LaunchDarkly, AWS CodeCommit & CodePipelining, Azure Data Lake, Azure Data Lakes.
Containerization, Scaling & Cloud Migration Tools	Docker, Kubernetes & AWS EKS, Helm, OpenShift, Jenkins, CloudFormation, Terraform, Ansible, Puppet, Chef, Kafka, Istio, StackRox, Vault, Consul, Tibco Silver Fabric & Gridserver, IBM / Platform LSF, IBM Globus
IAM / PAM Integration & Access Control	OAuth 2.0, OpenID, OIDC, SSO, SAML, Okta, Ping Identity, OAuth 2, OpenID, ThreatMetrix, SailPoint, LexisNexus, LDAP, ActiveDirectory, Radius, OIM, OUD, Quest One Identity, CyberArk
REST API Development & Management	Nodejs Express, Fastiy, gRPC, Got, Nest, .net Web API, Java Spring Boot, GraphQL, PHP, IBM API Connect, Akana, Apigee, WS02
Database & Cache Development	Oracle, SQL Server, MySQL, PostgreSQL, Informix, Sybase, GraphQL,, AWS RDS & Aurora, MongoDB, Neo4, Gigaspaces, Oracle Coherent, Hazelcast, ElastiCache
Messaging APIs	Socket.IO, WebSockets, MQ (RabbitMQ), AMQP, SOAP, Apache Jersey (JAX-RS API), Berkeley sockets
Web Development Frameworks	SPAs (Angular, React, Vue, Sencha ExtJS), server side (LAMP/WAMP/MAMP, J2SE JSP & servlets, ASP, ASP.Net, Spring Boot), Java Swing-based applets, PHP Code Igniter
Mobile Frameworks & Tools	Cordova, Ionic, React Native, Expo, jQuery Mobile, Android & iOS SDKs, Android Studio, Apple XCode, Capacitor, Sencha Touch, Kony
Programming Languages	JavaScript, Typescript, Java, C, C++, C#, Arduino C, Go, Python, Objective-C, Swift, PHP, Lua, Rust, VBScript, SQL, SPARQL
ITSM / ITIL, SRE Workflow & Service Monitoring Tools	Datadog, Splunk, AppDynamics, Dynatrace, OpsGenie, ServiceNow, ITSM, ITIL, Glassbox, CloudWatch, Solar Winds, New Relic, Aprisma Spectrum, HP-OpenView, Azure Application Insights, ELK, Prometheus
Operating Systems	Windows, Linux, Ubuntu, CentOS, Unix, Solaris, HP-UX, OSX / MacOS, z/OS, Android, iOS, VxWorks, Arduino
Programming Languages	JavaScript, Typescript, Java, C, C++, C#, Arduino C, Go, Python, Objective-C, Swift, Dart, PHP, Lua, Rust, VBScript, SQL, SPARQL
Blockchain Tools	Ethereum NFT, Solidity, Moralis, Web3.js, Goerli Faucet

AgFirst Farm Credit Bank April 2022 – Present **Enterprise Solutions Architect**

- Provide technical guidance and mentoring to cross-functional development teams on integration best practices, design patterns, and maintaining compliance with enterprise engineering standards. Guide application teams on the use of middleware, application servers, databases, message brokers, workflow engines, caching, and related platform components to ensure reliability, scalability, and maintainability.
- Designed and implemented a hybrid mobile app for borrowers using typescript, Reat Native, nodejs, Javascript and Azure APIM
- Implemented a nodejs-based GraphQL service that provides a gateway and governs access to on premise loan accounting system data from services hosted on Azure.
- Developed POCs that implement mobile application biometric authentication, fraud detection, Gen AI and hybrid cloud migration.
- Developed and integrated Gen AI chatbot service with the web-based customer portal.
- Integrated Salesforce and nCino data with the ACBS and DNA loan origination systems utilizing the Salesforce *account engagement* and nCino APIs.
- Designed and implemented an enterprise real-time account validation API service. The service utilized the Wells Fargo Logic box API using and Early Warning Database service. The API was integrated into the bank's existing customer digital account management workflow. The API was deployed to Azure APIM, implemented the *inbound, backend, outbound & on-error* policies that route, govern and authenticate API callers.
- Implemented new software development patterns that allow containerized services to fully utilize all the cpu cores allocated to a Kubernetes pod, reducing the number pods required to maintain capacity for customer SLAs.
- Developed microservice architecture reference implementations, Azure API gateway solutions and nodejs-based GraphQL services to accelerate development team productivity.
- Implemented CI/CD pipelines for service containerization and deployment in a hybrid multi-cloud (Azure/AWS) environment.
- Led the design and development of the enterprise data model utilizing a federate GraphQL architecture model.
- Designed and implemented enterprise integration services (ESB/SOA, API gateways, microservices, event-driven architecture, file transfers, workflow orchestration); standardize APIs, contracts, versioning, and interface governance.
- Implemented a REST API that provides custom metrics to the Kubernetes *HorizontalPodAutoscaler* that allows a pod to be scaled on request traffic.
- Contribute to enterprise architectures, developed migration paths from current state to target state architectures for application teams, and infrastructure across on-prem and multi-cloud environments
- Produce and maintain architecture artifacts, including system diagrams, decision logs, and risk assessments
- Collaborate with business and technical stakeholders on key initiatives, providing technical leadership, architecture guidance, technical project management and alignment with business goals

Citizens Bank May 2018 to April 2022 **Tech Lead / Solutions Architect**

- Responsible for the design and implementation of the security architecture and microservice design patterns that implement the IAM flows (auth, TLI, password reset, OTP, token management, threat assessment, etc.) utilized by applications that comprise the bank's consumer-facing digital portfolio
- Defined the microservice design patterns and security architecture that implement the IAM flows (auth, TLI, password reset, OTP, token management, threat assessment, etc.) used by the web and mobile applications that make up the bank's consumer-facing digital portfolio.
- developed a collection of developer frameworks that implement and encapsulate common features needed

by all microservices, such as cache management, SRE instrumentation, token verification, logging, API routing and tracing, and rest-soap mediation. Additionally, the frameworks enforce compliance with enterprise design and construction patterns.

- Developed a runtime extensible NodeJS-based GraphQL data broker framework and service that provides runtime schema stitching, dynamic resolver loading, dynamic multi-tenant domain object modeling, and access to on-premise data sources. Implemented federated GraphQL Supergraph using Apollo.
- Created Splunk dashboards to track error rates, transaction loads and performance, user experience, possible cyberattack activity, and SLA compliance. developed a series of Splunk alerts with actions that can start SRE incident flows when production alerting conditions are discovered
- Integrated ServiceNow, Splunk, OpsGenie & Slack with the SRE / ITSM workflows.
- Created a JWT token management microservice service for the IAM flows that uses Okta and Ping Identity to create, introspect, validate, and refresh user access tokens. It also integrates with NexusLexus and ThreatMetrix to conduct threat analytics as needed.

J2 Interactive January 2016 to May 2018
Solutions Architect / Senior Consultant

- Designed and implemented a telemedicine application that allows a physician to remotely configure dialysis equipment treatments parameters and monitors the equipment while use on the battlefield.
- Created a hybrid mobile application that uses BLE-enabled movement sensors to evaluate the quality of gym workouts and physical therapy exercises. While the equipment is being used, the application records movement and motion data and transmits it to the patient portal.
- Implemented an HL7 to FHIR gateway using Microsoft's Azure FHIR API and HL7 converter
- Developed a mobile notification app for physicians that enables the provider to select and monitor HL7 events or messages (ADTs) for a patient

Air Force Research Labs (AFRL) May 2009 to January 2016
Senior Software Developer / Application Architect

- Implemented a satellite telemetry monitoring and collision warning system application for the USAF JSpoC GPS satellite constellation. The orbital telemetry data from each satellite was merged with space debris / conjunction data and evaluated for alerting criteria.
- Migrated the US Joint Force Command deployment readiness system (*GSORTS*, *ARMS*) to an HPC grid environment focused on processing deployment logistics and alert management.
- Developed a full-stack hybrid mobile application for the US Customs department to detect counterfeit goods
- Developed a JTRS to AMQP gateway using Node.js and the JTRS Platform Adapter API
- Implemented a steganographic content discovery tool.
- created a dedicated HPC grid to collect and process data gathered from reconnaissance (GOES/R) and weather (GOES/8/12) data from satellite downlinks.
- Developed a full-stack web application that keeps track of sensor network event statuses on US Navy LCS ships. By combining, grouping, escalating, and merging all the event statuses with external data sources, the mashup server generates alerts and displays them on a map.

Oracle Corporation October 2005 to January 2009
Senior Software Engineer

- Implemented Transport layer encryption, connection fault management, and failover features for SQL*Net
- served as a solutions architect for the financial and federal government sector teams in Oracle's professional services division. provided software development services and collaborated with clients to implement various Oracle to enterprise application integrations
- Created and led developer training courses on PL/SQL, SQL*Net configuration, Pro*C, SQL*Forms, and SQL*ReportWriter

Microsoft Corporation July 2000 to October 2005
Software Engineer

- Developed a gateway from SQL Server to Informix utilizing the SQL Server Open Server SDK
- Member of the Microsoft Professional Services Group
- Implemented ODBC drivers for SPARQL-based inference engines.

AT&T / Bell Labs – June 1994 to June 1999 - Software Engineer / Lead

- Developed a network management system for the GTE virtual private network service (*VPN Advantage*) environment that monitored network device availability, bandwidth utilization, packet latency and compliance for SLOs/SLAs.
- Contributed to the design and implementation of an SS7 telephony alert management system for signal transfer points (*STP*) and signal switch points (*SSP*).
- Developed SNMP-based agents for remote monitoring of 5ESS switches and X.25 DTE devices link statuses
- Implemented a graphical MIB browser for the Spectrum network management system, utilizing the C++ Qt graphics module.

Education		
BS Computer Science	Boston University	1995
