Contact: +1 (860) 578-4926

Professional Summary:

- 9+ years of hands-on experience as a **Healthcare Business Analyst** in the healthcare industry.
- Good knowledge on various **insurance** products and plans like Endowment Insurance Products, Term Insurance Products and Unit Linked Insurance Plans, Health Insurance, Life Insurance Products.
- Experienced in developing and implementing **HL7 FHIR**-based applications in a variety of healthcare systems.
- Demonstrated expertise in navigating and ensuring compliance with healthcare regulations such as **HIPAA, GDPR, and FDA** guidelines.
- Worked on **Cerner** applications for Citrix Workspace and Relay to process claims and charge for medical services under **CMS (1500)** and **uniform billing (UB04)**.
- Medical Claims experience in Process Documentation, Analysis, and Implementation in 835/837/834/270/271/277/997 (X12Standards) processes of Medical Claims Industry from the Provider/Payer side.
- Involved in all phases of the **Software Development Life Cycle (SDLC)** and created **use case diagrams, process flow diagrams, and AS-IS diagrams**.
- Experience in gathering **functional and non-functional requirements** and preparing **Business Requirements Documents (BRDs)**.
- Extensive experience in preparing **Data Dictionaries, technical documentation, and source-to-target data mapping document**.
- Proven ability to write detailed **user stories** and **use cases** that capture all necessary requirements and provide a clear vision for the development team.
- Developing **test cases** and conducting **user acceptance testing** to validate that the **requirements** are being met.
- Experience in preparing, **traceability matrix** and **technical documentation** that meet the requirements of the stakeholders.
- Experience in collaborating with the **business team** and **development teams** and acting as a bridge.
- Experience in conducting **JAD sessions** and interviews with the **business team** and **tech team**.
- Extensive Expertise in transforming **business requirements** into **technical specifications** to be used by the technical team.
- Experience in working extensively with **Erwin, Visio, and ER Studio** for Dimensional modeling and Data migration projects.
- I have vast experience working in **data management** including **data analysis, gap analysis, and data mapping**.
- Experience working with **Data migrations** teams to ensure that the **ETL software** and loads were thoroughly **tested and that any issues or defects** were identified and resolved before the data was **migrated**.
- Experience in performing **Data profiling** to understand the data and to check if there are any issues in the data.
- Experience with **validation** data in relation to **enterprise system(s) migrations**, ensuring **accuracy and completeness** of data.
- Experience in designing and implementing **Data governance** policies, frameworks and ensuring that data is **accurate, consistent, and trustworthy**.
- Proficient in **Agile concepts** such as **user stories, backlog grooming, sprint planning, and retrospectives**.
- Understood the **Agile methodology** and how it is used in the project by participating in **sprint planning** and review meetings by collaborating with the team to prioritize tasks and deliverables.
- Experience with **Scrum** and **Kanban** agile methodologies, able to work closely with development teams to ensure projects are completed within the **Agile framework**.
- Familiarity with Agile tools such as **Confluence and JIRA** used to manage tasks and workflows.
- Used **Agile tools** to access data and insights from other systems to inform decision-making.

- Integrating **Agile** tools with other tools to streamline **workflows** by automating processes to improve efficiency and reduce manual work.
- Experience in analyzing and **documenting business and system processes** to identify **gaps** and areas for **improvement**, resulting in more efficient and effective workflows.
- Proficient in creating and configuring **SharePoint team sites** and collaboration spaces.
- Experience integrating **SharePoint** with other Microsoft Office products such as **Word, Excel, and Outlook** to streamline business processes and enhance productivity.
- **Documented** data flow process, which includes **source-to-target mapping** for a tracking system.
- Extensive experience using **SQL and Python** for **data manipulation, data filtering, and transforming data** before the data is migrated to the **new systems**.
- Created weekly, and monthly dashboards using **Tableau and Power BI** and worked on **ad-hoc projects** and **ad-hoc reports**.
- Optimized **ETL** workflows and performance by implementing **Teradata**-specific techniques, such as partitioning, indexing, and query optimization, resulting in improved data processing speed and efficiency.
- Worked extensively on **DML, DDL, and DCL** statements, and worked on complex **SQL queries** such as **joins** (inner joins, left outer joins, right outer joins, and self joins).

Technical Skills:

Programming Languages	SQL, SAS, Python.
Databases	Oracle, Azure SQL, SQL server, MySQL.
Tools	Git, JIRA, Informatica.
Operating systems	Mac, Linux, Windows.
Visualization tools	Tableau, Power BI, Azure Synapse Analytics.
Cloud Services	Azure, AWS, Data Bricks.
Computer Skills	Data migration, Data extraction, Data integration, Data visualization, Data Cleaning, Data Mining, Data Warehouse, Microsoft. Office (Access, Word, Excel, Power point, Visio), Cerner Applications such as Citrix workspace, Relay, Microsoft teams, problem solving and analytical abilities.
Expertise	Application of information technology in healthcare strategically, advanced healthcare data analytics, electronic health records, Advanced data analytics, information analysis and system design, database design, oracle, Evidence-Based Practice, clinical and business intelligence, healthcare operations, population health, Clinical and Business Intelligence, convergence of healthcare and IT, and legal aspects of healthcare IT.

Professional Experience:

Aetna, Hartford, CT

Dec 2021 to Present

Healthcare Business Data Analyst

Data-Driven Financial and Actuarial System

Responsibilities:

- Expertise in handling **Medicaid 837 and 835** transactions, including the electronic exchange of healthcare claims and remittance advice between healthcare providers and **Medicaid payers**.
- Developed complex actuarial models to evaluate **insurance policy pricing, reserving, and profitability**, contributing to accurate financial projections.
- Developed sophisticated financial models to forecast future cash flows, investment returns, and potential liabilities.
- Led initiatives to ensure compliance with **Solvency II, IFRS 17**, or other relevant regulations, minimizing legal and financial risks.

- Worked closely with investment teams to align actuarial assumptions with **investment strategies**, **optimizing portfolio performance** and ensuring long-term sustainability.
- Experienced in developing and implementing **HL7 FHIR**-based applications in a variety of healthcare systems.
- Worked closely with the Scrum Master and Product Owner to ensure that all project requirements were met on time and within budget.
- Proficient in using **ICD-10** and **CPT** codes to code and analyze healthcare data.
- Collected Business requirement documents, Functional Requirements Documents, Non Functional Requirements Documents by conducting JAD sessions.
- Gathered **Business Requirements** and Interacted with the Users, Designers and Developers. Proficient in creating clear and concise **technical documentation**, including user manuals, system specifications, and process flow diagrams, ensuring effective communication between technical and non-technical stakeholders.
- Conducted brainstorming and **JAD sessions** with stakeholders and end-users for requirement analysis and **documented** the same.
- Used **Visio** to create **use case diagrams, AS-IS diagrams, and Data flow** diagrams.
- Reviewed complex claims to determine appropriate reimbursement based on benefit and contract configurations.
- Conducted thorough analysis and elicitation of business requirements, translating them into **Sharepoint** functionalities, ensuring seamless integration with existing systems and processes
- Used **JIRA** to attend **sprint meetings** and collaborated with other team members.
- proficient in mapping data elements and developing data definitions by accurately analyzing source and target data.
- Collaborated with stakeholders and collected the **business requirements**, updates and created test plans as per requirement and reviewed it with stake holder for the approval.
- Wrote detailed user stories and use cases that clearly capture the user's needs and requirements, **using Scrum Agile methodology**.
- Facilitated **backlog grooming** sessions with the **Scrum team** to ensure that **user stories** and **use cases** are well-defined and ready for development.
- conducted thorough analyses of technical specifications, analyzing minute details to make that each component complies with project requirements and commercial objectives.
- Involved in creating and managing large data warehouses with **Redshift** by using **HL7 FHIR** standards Entity relationship documents.
- Involved in transferring the data from **Oracle** to **AWS** services and store the data in **Redshift**.
- Proficient in executing **pySpark** in **AWS Glue** for performing data analysis and also used for Data Mining.
- Experience in writing complex **SQL Queries, T-SQL** stored procedures, and functions in **Aws athena**.
- Creating and analysing numerous clients' reports for various financial requirements, Documenting workflow and results of analysis for the aging accounts.
- Worked closely with **stakeholders** to understand their needs, prioritize requirements, and make changes to the project as necessary using **Agile methodology**.
- Proficiently drafted clear and concise written communications, including project updates, status reports, and documentation, tailored to the communication needs of business owners, IT program team members, and management.
- Identified and removed any roadblocks that prevented the team from achieving its **sprint goals** and communicated effectively with **stakeholders** to manage expectations and provide visibility into the team's progress.
- Communicating with development and **QA** teams regularly to ensure accurate understanding and interpretation of requirements.
- Experienced in conducting user acceptance testing (**UAT**) to ensure system functionality meets user requirements.
- Developed and maintained **Tableau** dashboards and reports for business stakeholders, providing timely insights and data-driven decision-making capabilities.

Environment: ICD 10, CPT, Epic, EMR, EHR, HIPAA, HL7, FHIR, SQL, UAT, ETL, Informatica, Jira, Git Repository, AWS Redshift, AWS Athena, EC2, EMR, Informatica Cloud, Oracle, SQL, T-SQL, Agile.

Harvard Pilgrim Healthcare, Boston – MA

Nov 2019 to Nov 2021

Business Analyst- Healthcare

Project: Insurance Claim Processing system.

Responsibilities:

- Experienced with the updated policies of **Medicare & Medicaid** Services Guidelines for claims, **Medicare Part B benefits**, and all **Medicare Part B services**.
- Developed and implemented **automated routing and approval processes**, resulting in enhanced efficiency, and reduced manual intervention.
- Conducted thorough **investigations, collaborating with adjusters** and external experts when necessary to validate claims authenticity.
- Effectively communicated with **policyholders and claimants**, providing clear explanations of the claims process, status updates, and resolution outcomes.
- Utilized data analytics tools to analyze claims data, identifying trends and patterns that informed **strategic decisions for risk assessment and mitigation**.
- Experienced inappropriate federal, state, and local rules and regulations for managing the projects being worked on.
- Created and managed **business requirement documents (BRDs), functional and non-functional requirement documents**, and worked closely with stakeholders to understand their needs and ensure that requirements were clearly defined.
- Collaborated closely with cross-functional teams to gather requirements and translate technical information into understandable documentation for business owners, ensuring alignment between IT solutions and business objectives.
- Developed Incident documents and portrayed the As-Is reporting structures versus To-be Reporting needs for data integrity and accuracy.
- Created **User Stories** and **User Acceptance criteria** in **Confluence** to capture the requirements and expectations of stakeholders.
- Identified the scope, business objective and documented the functional requirements for each release.
- Proficient in developing **use cases**, acceptance criteria, and **user stories** to ensure that requirements are accurately described.
- Extensive experience in preparing **data dictionary** documents, **data definition** documents, and **Source-target mapping documents**.
- Collaborated with **cross-functional teams** to identify and resolve **bottlenecks, improve workflow, and implement continuous improvement** initiatives.
- Used metrics and data to **track progress** and improve the team's performance, such as **lead time, cycle time, throughput, and WIP limits**.
- Facilitated **Kanban events** such as **daily standups, backlog refinement, and retrospective meetings** to ensure that the team is aligned and **continuously improving**.
- Worked with teams to create a culture of **continuous improvement**, using feedback loops to identify areas for **improvement** and implement changes.
- Identified and managed **project risks** and issues, ensuring that they are **escalated** and **addressed** in a timely manner.
- Developed and implemented **Agile** methodology to ensure timely completion of data analysis and visualization projects.
- Proficient in writing complex SQL queries, crosswalk joins, subqueries in **AWS athena**.
- Proficient in utilizing Pyspark in **AWS Lambda** for triggering Pyspark scripts and to schedule events and perform data transformation from **SQL sever 2005** to **AWS red shift**.
- Developed and tested complex **SQL** queries to extract and manipulate data from multiple databases.
- Utilized **SQL** operations such as joins, subqueries, triggers, and views to ensure data accuracy and integrity.

- Facilitated the resolution of project-related issues, identified risks, and mitigation steps to manage risk using PLSQL in RDBMS.
- Extensive experience in translating business requirements and user expectations into detailed specifications by using various Text formats & United Modeling Language (UML).
- To manage software development projects and monitor progress, **Jira** was established and used.
- Developed and implemented comprehensive **UAT** test plans to ensure the areas for improvement and recommend solution.
- Track record of successfully managing stakeholder relationships, mitigating conflicts, and resolving issues to achieve project goals and stakeholder satisfaction.
- Collaborated efforts with technical staff and subject matter experts to establish the technical vision of product and analyze triple constraint tradeoffs.
- Experience in design and development of various dashboards, reports utilizing Tableau Visualizations like **Dual Axis, Bar Graphs, Pie-Charts, Heat Maps, Bubble Charts, Tree Maps, Funnel Charts, Box Plots, Waterfall Charts, Geographic Visualization** and other making use of actions, other local and global filters according to the end user requirement.

Environment: Medicare & Medicaid, HIPAA, EHR, Agile, ETL, AWS Lambda, AWS athena, AWS Redshift, SQL Server 2005, UAT, Jira, Tableau.

Mount Sinai, New York.

Jan 2017 to Oct 2019

Jr. Healthcare Business Analyst

Integrated Healthcare Network system

Responsibilities:

- Developed the Business Requirement documents (**BRD**), User Requirements, **Functional Requirements** and **Non-Functional Requirements**.
- Prepared the Software Specification Document for the application based on business user information.
- Conducted comprehensive analysis of **Medicaid** eligibility requirements and ACA regulations, ensuring accurate interpretation and implementation of guidelines for efficient enrollment processes.
- Created use case document to elaborate user experience considering the business objective.
- Converted Business Requirements to the Functional Specification to develop an architectural solution that the application meets the business requirements, resolve open issues, and change requests.
- skilled in developing use cases, acceptance criteria, and **user stories** to ensure that requirements are accurately described.
- Assisted in on-going process improvement efforts to ensure Test Planning, Execution, and Reporting is effective, efficient, standardized, coordinated, and integrated.
- Assisted the Senior Business Analyst in writing Functional Requirement Specifications (FRS) and User Requirement Specification (URS).
- Conducted **JAD** Sessions periodically with various stakeholders at various phases of the Software Development Life Cycle (SDLC) to discuss open issues and resolve them.
- Participated in various meetings and discussed Enhancement and Modification Requests.
- Produced comprehensive project progress reports, highlighting key milestones, deliverables, and potential risks, fostering transparency and aiding informed decision-making for management and stakeholders.
- Skilled in analyzing source and target data to map data elements and create data definitions.
- Experience working in **Agile** development environments, participating in **Scrum meetings**, and working closely with development teams.
- To store the data, tables were made in the **SQL database** using **facts** and **dimensions**.
- To build extremely complex and performance-optimized dashboards, Tableau's custom **SQL feature** was used.
- To examine the effects of the remote patient monitoring system, a connection to a **SQL database** was established using **Tableau**.
- Expertise in designing **star** and **snowflakeschema** and **ETL** data migration procedures.
- Used RPM system devices to analyze patients with specific conditions like diabetes and hypertension.
- Performed reporting and **performance analysis** on complex patient data.
- To maintain **data integrity**, anomalies and irregularities in the patient data were found.
- Recognized patterns, trends, and anomalies in the patient data to spot **potential medical problems**.

- Examined the patient's vital signs and medical history to provide any necessary health warnings.
- By integrating live datasets, I reviewed basic SQL queries and edited inner, left, and right joins in **TableauDesktop**.
- Created dashboards and **visualizations** in **Tableau** to track the usage of the system by patients and evaluate the results.
- Designed dashboards in **Tableau** to examine how the system performs under various conditions.
- Reviewed **reports** of patient vitals following system use and evaluated advancements.

Environment: Ms Excel, Ms PowerPoint, Ms Access, Ms Office, UNIX, ETL, SQL server, MySQL, Tableau.

LabCorp

June 2014 to Aug 2016

Clinical Data Analyst

Project: Cost prediction system

Responsibilities:

- Worked with various therapeutic areas like **oncology**, **Immunology**, **Endocrinology**, and **Gastroenterology** Etc.
- Worked with different clinical trial domains like Demographic, Adverse Events **AE**, Serious Adverse Events (**SAE**), Disposition, Medical History **MH**, **ECG**, Exposure, Concomitant medication **CM**, Vital Signs **VS** and Laboratory Data.
- Created Business requirements documents by conducting **JAD** sessions with end clients and updating with the team in the sprint plan and assign the stories in **Jira**.
- Prepared user-friendly training materials, guides, and manuals that effectively communicated system functionalities, enabling business owners and end-users to understand and utilize new solutions efficiently.
- Developed detailed user requirements documents, capturing business processes and functionality expectations in a manner that resonated with both business owners and IT development teams.
- Maintained sizable collections of patient data in well-organized **spreadsheets** in **Excel**.
- Completed upgrades, data migrations, backups, and recovery tasks for databases.
- Participating in the analysis, creation, and documentation of data specifications and **business requirements**.
- To store the data, tables were made in the **SQL database** using **facts** and **dimensions**.
- To build extremely complex and performance-optimized dashboards, Tableau's custom **SQL feature** was used.
- To examine the effects of the remote patient monitoring system, a connection to a **SQL database** was established using **Tableau**.
- Expertise in designing **star** and **snowflakeschema** and **ETL** data migration procedures.
- Used RPM system devices to analyze patients with specific conditions like diabetes and hypertension.
- Performed reporting and **performance analysis** on complex patient data.
- To maintain **data integrity**, anomalies and irregularities in the patient data were found.
- Collected and arranged **patient medical information** from **RPM devices**.
- Recognized patterns, trends, and anomalies in the patient data to spot **potential medical problems**.
- Examined the patient's vital signs and medical history to provide any necessary health warnings.
- By integrating live datasets, I reviewed basic SQL queries and edited inner, left, and right joins in **TableauDesktop**.
- Created dashboards and **visualizations** in **Tableau** to track the usage of the system by patients and evaluate the results.
- Designed dashboards in **Tableau** to examine how the system performs under various conditions.
- Reviewed **reports** of patient vitals following system use and evaluated advancements.

Environment: Ms Excel, Ms PowerPoint, Ms Access, Ms Office, UNIX, ETL, SQL server, MySQL, Tableau
