+1(201 708-8568

Sr. Business Systems Analyst with 8 years of experience on various types of projects in the healthcare, health insurance, and pharmaceutical industries.

Possess a broad knowledge of Documenting and presenting the deliverables at every milestone of the project through an understanding of business process engineering.

In-depth knowledge of intensive business measures in a medical care association,

Payer Systems, and Health Insurance field (medical care programs)

- Knowledge of various healthcare domain concepts, including HIPAA, HITECH, FDA guidelines, Fast Healthcare interoperability resources (FHIR), Laboratory information management systems (LIMS), Good automated laboratory practices (GALP),

Electronic medical records (EMR), Electronic health records (EHR), Patient monitoring devices and end-to-end claims processing issues by skillfully tracing their origin from submission to adjudication on healthcare management.

- Comprehensive knowledge of Protected Health Information (PHI) regulations and standards within the healthcare industry. Proficient in navigating various data formats, such as Electronic Data Interchange (EDI) and HL7 Interface

Implementation.

- In the realm of healthcare management systems ,well versed in Medicare, Medicaid Management Information System (MMIS), managed Care Plans such as Health Maintenance Organizations (HMO), Diagnosis Coding Standards like ICD-9 and ICD-10, Claims Payment Processing aligned in accordance with HIPAA, Electronic Data Interchange (EDI) X12 protocols and familiar with Affordable Care Act, EDI Transactions viz. 820, 834, 835 ,837, Patient Protection & Affordable `Care Act (PPACA), TriZetto FACETS Implementation, FACETS Data Dictionary, Health Insurance Marketplace / Exchange (HIM/ HIX), Medicaid Information Technology Framework (MITA), Health Information Trust Alliance (HITRUST).

- Led diverse projects by leveraging versatile range of SDLC methodologies such as Conventional Waterfall, agile methodologies like SCRUM, Scaled Agile Framework (SAFe), Hybrid Water-Scrum-Fall and familiar with XP practices, Kanban, Hybrid Scrumban, and Large-Scale Scrum Framework (LeSS) that enables me to tailor the project outcomes and satisfaction.

- Expertise in eliciting requirements using various techniques such as conducting Interviews, Document Analysis, Requirements Workshops, Observation, Focus groups, Prototyping, Joint Application Development (JAD), Card Sorting, and questionnaires. Performed AS-IS and TO-BE analysis and documented the process meticulously for thorough understanding.

- Proficiency extends into the meticulous documentation of the elicited requirements in Business Requirement Documents (BRD), Functional Requirement Documents (FRD), System Requirement Specification (SRS), Requirement Traceability Matrix (RTM), Use cases, Hybrid artifacts, Proof of concept, Risk Assessment Documents and In-process review report documents.

- Proficient in conducting a variety of analyses to project Stakeholder Analysis, Risk Analysis, Feasibility Analysis, Cost Benefit Analysis, GAP Analysis, SWOT

Analysis, Change Management processes, and Technical and Business Impact Analysis.

- Expertise in the realm of design and visualization in creation of Wireframes, Mock-up Screens, Low-fidelity, and High-fidelity prototypes, and business process modeling notation (BPMN, Unified Modeling Language (UML) - Sequence diagrams, Activity diagrams, and Use case diagrams using Lucid Charts, Figma, Balsamiq, and MS Visio ensuring the requirements.
- Experience with an array of interactive and collaboration tools like MS Project, Trello, Confluence, Tableau, and SharePoint to improve communication and teamwork to coordinate and execute tasks ,ultimately contributing to project success.
- Demonstrated Scrum ceremonies such as sprint planning, daily standups, sprint reviews, and sprint retrospectives to encourage a dynamic culture of continuous improvement within cross- functional teams. Expertise extends in documenting various Scrum Artifacts such as Product Backlog, Release Backlog, and Sprint Backlog ensuring the transparency of the project.
- Expertise in writing User Stories and their Acceptance Criteria in the collaboration with Product Owners in defining the Definition of Ready (DOR) and Definition of Done (DOD), INVEST (Independent, Negotiable, Valuable, Estimable, Small, Testable) criteria for user stories, and refined Sprint Burn-up chart, Sprint Burn-down charts, and Control charts.
- Well-versed in data processing in both Online Transaction Processing (OLTP) and Online Analytical Processing (OLAP) including ROLAP, MOLAP, and HOLAP, and experience in performing OLAP operations like Roll-up, Drill-down, Slicing, Dicing, and creating Pivot tables in handling and analysis of data, contributing to informed decision making and strategic planning.
- Understanding of cutting-edge cloud platforms like AWS, Azure, and salesforce leveraging services like AWS Lambda, S3, API gateway, Redshift, EC2, AWS cloud trail, Azure data factory, Apache Kafka, Azure DevOps to build scalable healthcare solutions to optimize data management and processing ,fostering innovation and scalability in healthcare IT.
- Proficient in creating Data Mapping Documents, Data Modeling (Conceptual, Logical), E-R Diagrams, Backup and Data Migration strategies, and Data Validation using SQL queries on MySQL Server, and Microsoft SQL Servers .
- Expertise in database querying in the use of unions, and joins utilizing clauses and aggregate functions to query data effectively, source system assessment & and perform data analysis. Knowledge of Views, Order, Group by, Stored Procedures, Subqueries, and Case Statements, especially tailored for reporting purposes to deliver insightful and meaningful data analytics.
- Expertise in Data Management, activities like Source Exploration and Target data analysis to Data Cleansing, Business Intelligence, Data Migration, Metadata Management, Data Analysis and strong knowledge of Data Governance principles.
- Extensively utilized Informatica PowerCenter to perform ETL jobs ensuring seamless integration, actively engaged in mapping requirements and collaborated closely with developers to design comprehensive reports that provide valuable insights.
- Knowledge in performing CRUD operations including GET, PUT, POST, PATCH, and DELETE methods, API Endpoint Validation using industry standard tools like POSTMAN and creates a detailed documentation using Swagger to capture the different error codes received and parameters by enhancing the clarity and efficiency of the development process.
- Actively involved in documenting, validating, and testing different Application

Programming interfaces (API) such as SOAP APIs , REST API and Real-time APIs using software like MULESOFT, POSTMAN, and SWAGGER for integration.

- Collaborated effectively with QA Team in formulating Test Plans, Test Cases, Test Scripts, Test Scenarios, Test Data, issuing the Test Reports, and validating requirements with the Requirements Traceability Matrix (RTM) to cross-verify the increments.
- Assisted Testers in performing User Acceptance testing (UAT), Smoke and Sanity Testing, Regression Testing, and actively contributed to creating artifacts such as detailed Test Plans, Test Scenarios, Test Cases, and Defect Logs in the Software Testing Life Cycle. Well-versed with TDD, ATDD, and BDD using selenium, cucumber, HP-ALM/ QC, Zephyr, and Bugzilla.
- Proficient in Business Intelligence and reporting with experience in creating Static Reports, Ad hoc reports, KPI reports Interactive Reports, and Interactive Dashboards using Visualization tools like Tableau, and Power BI.

Authorized to work in the US for any employer

Work Experience

Sr. Business Analyst

PROFESSIONAL EXPERIENCE, Health Catalyst - South Jordan, UT

July 2022 to Present

Developed and implemented an interoperable medical platform using AWS Services.

The goal was to improve medication adherence by connecting the platform to existing EHR, e-prescription, and pharmacy systems, as well as boosting patient engagement. The project was a success in improving medication adherence rates , reducing reporting errors with user adoption.

Responsibilities:

- Collaborated with the developers and compliance team in implementing FHIR, HL7v2/v3 international standards to ensure understanding and analysis of the HIPAA, HITECH, EHR, and PHI regulations to consume data in real-time and feed it into the Cloud leveraging AWS services like AWS Kinesis, AWS Lambda , and DynamoDB to ingest and process the data.
- Expanded stakeholder engagement efforts conducting interviews and workshops with SMEs and stakeholders to gather functional and non-functional requirements along with the GUI and data specifications for enhancing comprehensive data collections process in playing a pivotal role in refining the platform services and elevating the overall user experience.
- Analyzed existing systems by implementing the GAP analysis and created detailed As-Is & To-BE Documents to address the areas of improvement and enhancements to address the evolving system capabilities and needs to reach the objectives of the project.
- Utilized industry best practices and benchmarks to enrich Cost Benefit Analysis, and Root Cause Analysis to understand and document the technical and business needs by integrating the valuable feedback loops into the development process.
- Created Wireframes, Graphical user interface (GUI) Mockups, and evolutionary , throwaway Prototypes using Lucid Charts, in leveraging collaborative features to engage stakeholders in real-time reviews to visualize the UX/UI of the system.
- Collaborated closely with the Product Owner to effectively merge Product Vision Meetings, Backlog Grooming, Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective ensuring all Agile methodologies and establishing clear

Definition of Ready (DOR) and Definition of Done (DOD) criteria enhancing the overall efficiency and progress of sprints.

- Facilitated User Story Writing sessions adhering to INVEST and SMART criteria, initiated daily standups, ensuring sprint progress, and addressing impediments promptly in the Scrum Master's absence. Collaborated and utilized JIRA to generate a detailed burndown reports, and further detailed monitoring of team performance, enabling timely adjustments to optimize project.
- Initiated HL7 integration data mappings, Webservice mappings, and API data exchanges and assisted the development team by conducting rigorous API testing using Postman, ensuring the reliability and functionality of critical endpoints, and comprehensively documenting these tests in creating clear and detailed test cases using Swagger to robust the process.
- Created data mapping specification document, assisting in executing data the ETL process using AWS Glue into the Redshift data warehouse and performed data profiling to maintain a consistent flow of data, enhancing data integrity and reliability.
- Analyzed data from AWS S3 bucket and Redshift using SQL functions (aggregate, order by, group by, joins and Union) to extract pertinent data for identifying entities, structuring, manipulating, and calculating information to fulfill intricate data, and reporting needs are involved in identification and documentation of relevant tables for further analysis.
- Retrieved data from database using SQL, designed and implemented basic SQL queries for QA testing and data validation.
- Extensively worked in data requirement analysis and data mapping for ETL process to optimize data flow and transformation.
- Conducted comprehensive OLAP operations, by offering flexibility and depth in data analysis through Slice, Dice, Pivot , Roll-up, and Drill-down techniques to understand the data in different dimensions for supporting decision-making.
- Ensured effective communication producing accurate and comprehensive REST API documentation and tested REST API using different HTTP methods GET/PUT/POST/DELETE then gathered information about the Request, Response, and types of parameters of Interface API in JSON format, tested it in POSTMAN and were documented it in SWAGGER.
- Collaborated with the QA team , and contributed to the creation of Test plans, Test cases, and Test scenarios including User Acceptance Tests (UATs) and data validation processes ensuring the accuracy of advanced analytics integration leveraging bug logs and defect management using JIRA and HP ALM in collaborative quality assurance approach and analytics solutions.
- Collaborated with the Business Intelligence team to design and create reports by tool AWS Quick Sight to create an interactive dashboard, and graphs to visualize reports, and analyze and track the medication adherence and metrics, ad hoc reports and identify trends to enhance the interpretability of complex data sets to provide a user-friendly interface for stakeholders.

Environment: Agile-Scrum, Jira, Confluence, Windows 11, GitHub, Lucid Charts, POSTMAN, SWAGGER, JavaEE, HTML, XML , SQL, Elastic Beanstalk, AWS Cognito, AWS

Redshift, AWS Quick sight, AWS lambda, AWS S3, AWS Glue, Amazon Kinesis, API gateway, HP ALM.Kansas Department of Health & Environment, Lawrence, KS

May 2020-Dec 2021

Business Systems Analyst

Implemented OCR and ICR-based software that automates claims form processing, extracting data from EOBs, CMS 1500 & UB-04 documents. Achieves reduction in manual processing costs by eliminating the need for human data entry, streamlining workflows, and enhancing efficiency for organizations. Meets the primary goal of reducing manual work and associated expenses.

Responsibilities:

- Analyzed the incoming flow of X12 EDI 835 (Health Care Claim Payment &

Remittance), and X12 EDI 837 (Health Care Claim) transactions through Apache Kafka pipelines and monitored the working of the EDI parser which parses the claims.

- Facilitated interviews with SMEs to comprehend requirements for enhancement of the claims process using FACETS.

- Conducted a comprehensive System Analysis by utilizing industry-standard methodologies to discern the current AS-IS process.

- Collaborated closely with cross-functional teams to gather requirements and design the TO-BE process, leveraging the Business Process Modeling tool, Microsoft

Power Automate to build automated workflows for various processes which were repetitive.

- Designed and created Use Case Documents, high-fidelity, and low-fidelity mockups, and wireframes, and used tools such as Microsoft Visio for the

Development and Testing teams to track the business scenarios which was also part of DORs for the issue.

- Collaborated with developers to design and develop the Conceptual and Logical Models for the system, which included identifying entities and their attributes, as well as defining relationships between them using Entity-Relationship Diagrams

(ER). Utilized MS Visio to create and maintain the E-R diagrams, ensuring alignment with the business requirements.

- Facilitated User Story Writing sessions and determined Acceptance Criteria for various requirements during PI Planning.

- Participated in ART (Agile Release Train) ceremonies and bridged the communication between business and development team.

- Collaborated with the Product Owner to maintain the Program Backlog, which included managing cross-team dependencies within the Agile Release Train (ART).

This involved identifying and managing inter-team dependencies, updating the Program Backlog regularly, providing support to the Product Owner to ensure that the Backlog was in line with the ART's strategic goals.

- Collaborated with the Product Owner to apply vertical slicing technique in decomposing features into smaller, independent user stories. Utilized Azure DevOps practices to facilitate the creation and maintenance of user stories, as the Program Backlog.

- Assisted the Scrum Master in conducting ART ceremonies such as PI Planning, System Demo, and Inspect and Adapt workshops, and assisted in creating sprint reports such as Burndown/Burnup Charts and information radiators.

- Worked with business users and analytics team to gather reporting requirements, design dimensional data model for enterprise DWH.

- Created SQL queries using joins, unions, group, order by, and aggregate functions to extract data from Azure SQL Database. Reviewed existing Stored Procedures and tuned SQL queries for better performance to support application developers.

- Created REST API documentation using JSON format and Azure API Management.

Converted the documentation to the Open API specification (Swagger) format.

Executed end-to-end testing of CRUD (Create, Read, Update, Delete) operations to validate expected functionality. Conducted testing in production and development environments to identify environment-specific discrepancies. Verified API response time and error codes met performance standards and provided meaningful error messages.

- Utilized ETL process for source exploration using Azure Data Factory (ADF) for mapping data from different sources to the target and created a Data Mapping document for the application after finalizing the attributes and tables with business users.

- Worked with Development QA, and Production Support teams to communicate, verify, and test the desired functionality, and assisted the Testing team in creating Test Plans, Test Scripts, Test Cases, and Test Reports and documented all test results.
 - Involved in regression testing and facilitated user acceptance testing (UAT) by having de-briefing sessions with the selected users.
 - Implemented CI/CD pipeline to promote flows across environments and integrate the version control and performed data validation.
 - Designed OLAP cubes on the top of the synapse enterprise data model to enable fast slicing and dicing of data for analytics.
 - Created reports, KPIs and dashboards in Power BI connected to warehouse as well as Kafka streams for real time data visualization.
- Environment: Scaled Agile Framework (SAFe), JIRA, Confluence, Zephyr, Windows 11, Azure API, Azure Data Factory, Azure DevOps, Azure SQL Database, Apache Spark, Lucid Chart, Spark SQL, MS-Office 2016, POSTMAN, SWAGGER, Apache Kafka, FACETS,

Sr. Business Systems Analyst

Zeppelin, Spark Shell, PowerBI McKesson Health solutions - Norwalk, CT
November 2017 to April 2020

The goal was to enhance the quality and efficiency of healthcare services at a medical center. It centered on integrating the Electronic Health Record system (EHR) with Salesforce Health Cloud. This allowed for more collaborative treatment and improved customer relationship management (CRM) through the various features of Salesforce Health Cloud. Overall, the integration aimed to improve care coordination, and visibility into patient data, and strengthen provider-patient relationships.

Responsibilities:

- Mastered relevant technologies to support the design, development, and deployment of Salesforce Health Cloud, as well as interaction with AWS Redshift contributing significantly to the realm of Business Process Re-engineering (BPR).
- Networked with various stakeholders, subject matter experts (SMEs), conducted Interviews, Surveys, Questionnaires, created AS-IS workflow and by documenting the needs of the business, drafted the TO-BE process, and validated the GAP Analysis.
- Actively participated in the upfront planning and designing phase. Created artifacts such as Business specification document (BRD), Functional requirements document (FRD), and Software Requirement Specification (SRS) to facilitate the project.
- Created enterprise business process modeling (BPM), UML diagrams such as activity diagrams, and sequence diagrams using Lucid Charts as a collaborative modeling tool, created low-fidelity and high-fidelity mockups and wireframes using Figma tool.
- Created a Release Planning Document consisting of a high-level overview of all the requirements to be released in the upcoming sprint collaborated closely with the Product Owner and contributed to crafting a pre-defined release schedule.
- Participated in determining the cadence for the sprint based on the Capacity of the team, facilitated, and participated in Scrum Ceremonies such as Backlog Refinement, Sprint planning, Daily Standup Sprint review, and Sprint Retrospective meetings.
- Facilitated meetings with Salesforce Admin, Developers, and Architect to determine the data that needs to be integrated from AWS Redshift into Salesforce Health Cloud, analyzed the data of EHR such as Administrative and billing data,

Patient demographics, medical histories, Allergies, Radiology images, Lab, and test results by mapping them into objects and fields.

- Focused on converting data to FHIR format to achieve a comprehensive view of patients transitioning from Hospital Discharge to Long-Term Care, and Home Health.

Collaborated with the Salesforce Admin to create a patient field reflecting reliability level and implemented encryption for PHI and PII, enabling a centralized 360-degree patient view for improved forecasting.

- Retrieved patient data from AWS Redshift DWH through complex SQL queries to perform data assessment, analysis, and validation by retrieving from the backend.

Utilized Joins, views, and Subqueries, and developed SQL store procedures for automated information and demonstrated proficiency in working with procedures, and triggers to enhance data validation.

- Constructed ETL pipelines utilizing Mulesoft to ingest ,transform and load normalized data into analytics and conducted validation.

- Facilitated two-way integration with MuleSoft API manager to synchronize AWS

Redshift data with Salesforce health cloud to connect EHR, facilities and procedures, environmental information, credit, and claim information of patients.

- Utilized swagger documentation for testing APIs and validating responses to ensure proper integration and tracked API defects .

- Actively collaborated with the Testing team in various types of testing such as Integration tests, Regression Tests, Performance Tests, and User Acceptance Tests (UAT) and reported test results. Analyzed Test Performance reports through Zephyr.

- Performed OLAP operations on multi-dimensional AWS redshift to analyze and leveraged KPIs to optimize report performance.

- Collaborate on ETL processes to guarantee the data is available and accurate for reporting purposes to evolve the business needs.

- Leveraged insights to enhance customer satisfaction and improve the net promoter score (NPS) by identifying and resolving bottlenecks, ensuring timely care for members. Worked with the testing team in creating analytics dashboards using Power BI.

Environment: Agile-Scrum, Salesforce Health Cloud, AWS Redshift, MuleSoft, lucid charts, Figma, SQL, Power BI, JIRA , Confluence , Zephyr, Swagger, MS Office

365.Nephroplus, Hyderabad, India June 2016-Nov 2017

Sr. Business System Analyst

The project aimed to lower operating and maintenance costs, so they migrated their on-premises ERP system to the cloud to achieve this goal. The key objectives were optimizing version control, reducing ongoing maintenance fees, and enabling flexible scalability. After completing the migration to the cloud-based ERP, the company got a 25% decrease in maintenance expenses.

Responsibilities

- Facilitated Joint Application Development(JAD) and brainstorming sessions with stakeholders, SMEs, and the IT team to elicit requirements as accurately as possible. Additionally, used Document Analysis to delve into the intricacies of the existing system.

- Performed robust GAP Analysis, and Fishbone Analysis alongside Solution

Architects which included capabilities, requirements & and needs against the system technology. Assessed various technical complexities that could affect business functionalities.

- Performed source system exploration, and target system and assessed the size and type of data that needs to be migrated.

- Partnered with key decision makers and stakeholders of the finance department to explain the benefits of migrating to the cloud using AWS Technologies and conducted a cost-benefit analysis to inform the right level of services required that meet the needs.
- As a part of the project management process, developed an Application Dependency Mapping Document to provide a comprehensive understanding of the relationships between different components of business services and applications.
- Performed thorough Risk Analysis and Risk management of the project and produced Backup Recovery Solutions with DevOps and cloud engineers to make sure that there is no application downtime throughout the migration process and documented it.
- Assisted DevOps Engineers in developing the Product Process Design and Continuous Product Delivery strategies for project.
- Used AWS Cloud Adoption Readiness Tool to assess the readiness of the organization for successful cloud migration.
- Assisted cloud team in implementing instances on Amazon EC2 and various AWS Services like S3 through HTTP protocol, Cloud Trail, Cloud Front, WAF, Elastic Load Balancers, and Lambda to ensure the data pipeline is precisely defined.
- Executed CRUD operations to manage normalized data and validate the expected functionality, verified API response time ,errors.
- Assisted in the testing using Rest API involved within various AWS Services and documented them using SWAGGER.
- Conducted comprehensive data validation by assessing various metrics, viewing logs, and running complex SQL queries like Joins, Union, Sum, and Max. and loaded data into warehouse for data integrations and applied business rules for execution plans.
- Ensured that ERP is working in sync with the on-premises Laboratory Information Management System (LIMS) to strengthen.
- Assisted in the User Acceptance Testing and coordinated with the UAT team to schedule and assist the business users in understanding the features and capabilities and assisted in Testing to meet the expectations and requirements of the end users.
- Developed ,documented , and maintained functional test cases and other artifacts like the test data, data validation, harness scripts, and automated scripts using HP QC and involved in Defect Life Cycle Management and assisted in creating Issue logs.
- Designed OLAP cubes on the top of the synapse enterprise data model to enable fast slicing and dicing of data for analytics.
- Created reports, KPIs and dashboards for real time data visualization to communicate with stakeholders about the performance.
- Collaborated in migration with stakeholders, and system architects for customized reports and dashboards using Tableau.

Environment: Agile-Scrum, SWAGGER, AWS Cloud Adoption Readiness Tool, AppDynamics, Oracle Database 11g, Tableau, SharePoint, Amazon Web Services Products EC2, S3, Cloud Trail, Cloud Front, Elastic Load Balancer, Lambda, MS-Office 2013, Windows 7, MS-Project 2016

Responsibilities:Alkem Laboratories, Hyderabad, India

Oct 2015- June 2016

Business Analyst

The application is to automate the LIMS system by integrating the EHR system into the LIMS system. The LIMS system 1 prints the 3D- barcode and the caregiver enters patient data manually in LIMS system and another one is Medicopia transfers data via a TCP/IP network connection utilizing the HL7 protocol. The

front desk is integrated with the LIMS system, so the customer data will be collected and entered into the front desk system manually. The LIMS system will extract the information from the desk.

- Interfaced with the Subject matter experts (SME's) and stakeholders to understand business needs and requirements, and to set up the technical vision of the product and analyze triple constraint trade-offs to ensure a balanced approach to the project.
- Managed Impact Analysis to get an estimation of the system conversions of ICD 9 codes to ICD 10 with minimal disruptions.
- Accumulated information on HIPAA (Securing data), GALP (Good automated laboratory practices), GSP (Good storage practices), GDPR (collecting, securing personal data, financial, medical, and biometric data) rules and guidelines. The integration of the Electronic Health Record (EHR) system to LIMS system unfolded under the strict HIPAA guidelines. The integration involved in the application of HL7 and EDI X12 transactions to ensure the compliance for data transaction elements.
- Generated UML diagrams including Use Case Diagrams, Activity Diagrams, and Sequence Diagrams using Lucid charts.
- Immovably cooperated with the Product Owner to Prioritize and Estimate the User Stories and contributed to writing detailed Acceptance Criteria using JIRA as a robust platform for managing tasks and support the creation of minimum viable product.
- Mapped RTM for drafting the Test Cases and requirements identified are documented and extended in assisting the testing team in writing Test plans, Test scripts, and Test scenarios for functional, load, stress, performance, and regression testing.
- Involved in managing bug tracking and defect prevention activity using defect management life cycle in JIRA to improve issue/bug fixes and maintain the issue log. Solely responsible for the database design of several critical data tables and ETL routines. Strategized moves that will streamline reporting needs as well as improve report performance.
- Designed and created complicated SQL queries for production support data analysis, which involved effectively in fetching and displaying data using SQL queries which effectively executed exporting table data in MS- Excel and flat files to enhance the data.
- Visualized and created various graphs such as Heat Map, Tree Map, Scatter plots, and dashboards using Tableau for identifying opportunities and spotting inefficient processes for an informed decision-making process.

Environment: Agile-Scrum environment, JIRA, Lucid charts, Tableau, Informatica, MS PowerPoint, MS Excel, MS Access, Oracle, HP QC, MS SQL server.Sun Pharmaceuticals,

Business Analyst

Hyderabad, India

May 2015 to October 2015

The project is aimed at designing an online web portal for the pharmaceutical manufacturing company to monitor the supply of drugs to healthcare providers by assigning a machine-readable unique code and a unique record is created each time when an individual handles the portal. Thereby, making it easy to track the sample anytime.

Responsibilities:

- Elicited requirements using techniques like, semi-structured Interviews, document analysis to understand the project landscape and followed by a detailed analysis of the gathered requirements to ensure project intricacies.
- Conducted comprehensive Gap analysis from (As-Is to To-Be) to document requirements for existing system enhancements.
- Created various requirement artifacts such as the Business Requirements Document (BRD) and Functional Requirement Document (FRD), and the Requirements Traceability

Matrix (RTM) to track issues and ensure the project goals.

- Worked on GUI development by creating mock-ups to review requirements and provided feedback on the screen design using MS Visio and UML Diagrams including

Use Case and Activity Diagrams for visual representation of projects design.

- Coordinated with the Change Control Board when a Change Request needed to be registered. Performed Impact Analysis on the Change Request, as well as getting the necessary approval signoffs to ensure the change management process.

- Coordinated with the testing team during the formulation of Test plans and Test

Cases for Functional, System Integration, User Acceptance Testing (UAT), and

Regression Testing based on the Design Document and user Requirement Document for

Functional and Performance Testing to robust the testing protocols to validate the integrity and performance of the project.

- Created visualizations such as reports, and dashboards using Power BI tool to report to the key stakeholders on time.
