Education

Master of Science, Information Systems

Northeastern University, Boston, MA

Sep 2021 – May 2023

Bachelor of Technology, Information Technology

Indus University, Ahmedabad, INDIA

Aug 2017 – May 2021

Experience

Associate Product Manager, Digital Factory, Inc.

Mar 2023 – Present

- Implemented end-user research to help identify user stories and determine Minimum Viable Product (MVP)
- Contributed to the overall product roadmap by identifying features, enhancements, and opportunities for innovation related to customer support on the Digital Factory Experience App
- Delivered an advanced payment gateway implementation for the Digital Factory Experience App, enhancing transaction security and efficiency, resulting in improved user engagement and revenue
- Researched, evaluated, and implemented cutting-edge no-code tooling solutions that were utilized to automate and streamline the current Digital Factory website resulting in a 40% reduction in manual processes
- Analyzed data from user surveys like customer satisfaction score, navigation, and usability to generate reports for making better data driven decisions for the Digital Factory website

Product Manager Intern, Crest Coder

Dec 2022 – Feb 2023

- Led initiatives to identify pain points in the customer support journey and developed strategies to improve overall satisfaction, responsiveness, and efficiency by 25% contributing to an enhanced customer experience
- Monitored each stage of third-party integration for a restaurant food delivery system which includes integrating Google Maps embedded API, testing functionality, security, and overall performance of the APIs
- Reported technical issues and made recommendations to the product team regarding UI bugs, API documentation, and streamlined requirements ticketing processes within JIRA
- Increased daily user engagement by 30 mins by redesigning entire mobile app UI after diagnosing usability issues

Business Analyst, Crest Coder

Jun 2018 – Aug 2021

- Constructed new data pillar in existing Tableau dashboards to create weekly & monthly trends and improve overall visibility by 55% fostering data-driven decision-making
- Translated unstructured data coming from multiple departments into structured format & retrieved data using SQL
- Conducted strategic plan and forecasts considering horizons such as 60-day collection, 120-day operations, 180-day sales, and 1-year product launch to identify future trends
- Provided key insights for Search Engine Marketing to the flights booking system by building keyword management strategy, increasing the impressions by 15% per week
- Developed value-added business strategy and a comprehensive marketing that boosted client revenue by 72%
- Designed a framework to migrate manual tests for legacy applications to automated paradigm, realizing a remarkable 33% efficiency gain in testing operations
