- Senior Business Systems Analyst with 8+ years of experience across Finance and Banking sectors including expertise in Investing & Trading Strategies, Regulatory Compliance, Treasury Management, and Financial Modeling with expertise in Asset Classes. Possess experience in Waterfall and Agile (Scrum, SAFe) methodologies across diverse SDLC environments.
- Proficient in diverse array of financial sectors, encompassing Mergers & Acquisitions, Venture Capital, REITs, Private Equity, Investment & Commercial Banks, and Hedge funds, integrated various risk models such as Liquidity, Market, and Credit Risk. Employed sophisticated financial metrics including Ratios and Option Greeks for comprehensive risk analysis.
- Skilled in aligning sustainable investment products with evolving ESG Goals while ensuring Know Your Customer (KYC) and Anti-Money Laundering (AML) adherence, alongside expertise in navigating complex financial regulations such as the EU Taxonomy, Sustainable Finance Disclosure Regulation (SFDR), Dodd-Frank Act, MiFID II, and Basel I, II, and III.
- Administered in integrating financial model & risk models, incorporating Discounted Cash Flow (DCF), Net Present Value (NPV), and Internal Rate of Return (IRR), Budgeting analyses, to enhance Financial Planning and Analysis (FP&A).
- Partnered with a diverse range of stakeholders, including End Users, Business Owners, Product Managers, Management and utilized effective Elicitation Techniques such as Joint Application Development (JAD), Brainstorming, Interviews, Questionnaires, Prototyping, Document Analysis, Focus Groups, and Interface Analysis to gather requirements effectively.
- Created business documents such as Business Requirement Document, Functional Specification Document, Requirements Traceability Matrix, System Requirement Specification, Risk Register, and RACI Matrix. Utilized Critical Path Analysis, GAP Analysis, Work Breakdown Structures, and Earned Value Management to enable robust project governance.
- Facilitated user-centric requirements gathering and fostered effective communication between UI/UX teams, stakeholders, and developers to shape visually appealing interfaces and user experiences to align design with user needs and business objectives.
- Designed use case diagrams, sequence diagrams, data flow diagrams, and activity diagrams using MS Visio. Developed wireframes and mockups leveraging Balsamiq, Lucidchart, and Draw.io enabling clear communication & structure of design.
- Collaborated with the Solution Architect to formulate and refine the system architecture, integrating advanced technology and ensuring scalability, and security. Played a key role in translating business requirements into a robust backend system design.
- Adept in creating and maintaining Product Backlog, Sprint Backlog, Burndown, Burnup chart. Utilized MoSCoW and KANO techniques to prioritize the features. Estimated user stories using Planning Poker and T-Shirt Sizing in Backlog Refinement. Assisted in defining Acceptance Criteria, Definition of Ready, DoD, MVP. Participated in Agile ceremonies including, Sprint Planning, Daily Standups, Sprint Reviews and Sprint Retrospectives to deliver high-priority features on schedule.
- Designed star and snowflake data schemas, entity-relationship models, logical data models, conceptual and physical data models to facilitate seamless data exchange and integration between different systems, ensuring data quality and consistency.

- Assisted in creating data mapping documents and ETL with Informatica and Talend to reliably migrate data to a data warehouse, enabling efficient data analysis and reporting, including Online Analytical Processing (OLAP) operations such as roll-up, drill-down, slicing, dicing, and pivot, as well as Online Transaction Processing (OLTP) operations.
- Spearheaded data migration initiatives leveraging both AWS and Azure to ensure smooth data transition and integrity preservation for business-critical applications. Designed and deployed data warehousing solutions utilizing AWS and Azure capabilities to enable scalable storage and retrieval of extensive datasets, bolstering business intelligence and analytics.
- Contributed to the adoption of modern testing methodologies such as Behavior-Driven Development (BDD), Acceptance Test-Driven Development (ATDD), and Test-Driven Development (TDD) to ensure continuous integration & testing.
- Consulted the QA teams in creating extensive test documentation including detailed test plans outlining scope, resources, and schedules coupled with comprehensive test cases, test scenarios, test scripts and test data enabling thorough validation.
- Executed a wide variety of testing techniques including sanity testing, stress testing, smoke testing, regression testing, performance testing and User Acceptance Testing (UAT) for validating functionality and alignment with business requirements.
- Effective in utilizing tools such as Jira for comprehensive issue tracking, project management, and workflow management, and Confluence, SharePoint for streamlined documentation, collaboration, enhancing team productivity and project efficiency.
- Skilled in performing SQL queries for performing CRUD operations including Clauses, Aggregate Functions, and Joins (Inner, Outer). Extending expertise in creating SQL components like Stored Procedures, Functions, Triggers, Cursors, and Views.
- Utilized RESTful and SOAP protocols. Conducted Get, Put, Post, Patch, Delete operations. Conducted API testing using Postman covering HTTP methods and endpoint validation while documenting APIs via Swagger to confirm integration points.
- Optimized advanced data analytics tools such as Tableau, PowerBI, and AWS QuickSight to extract actionable insights from complex datasets. Proficiently designed and developed interactive dashboards, reports, and visualizations for decision-making.
- Leveraged Microsoft Excel with adept use of VLOOKUP, HLOOKUP, and PivotTables. Transformed raw data into business insights through modeling, analysis, and visualizations like Bar, Line, Scatter, and bubble charts to guide data-driven decisions.

Work Experience

Sr Business Systems Analyst

PIMCO Investments - New York, NY

December 2021 to Present

Project Description: The project's objective was to modernize investment strategies to enhance portfolio performance, operational efficiency, and alpha generation in fixed income funds, while incorporating ESG metrics, mitigating risks, transitioning to a risk management approach, upgrading to factor models, and positioning the organization as a leader in sustainable and responsible investing.

Roles and responsibilities:

- Coordinated an initiative that aligned the investment strategy with ESG principles, realizing a remarkable reduction in portfolio risk, increase in alpha generation, and reduction in ESG-related compliance incidents leading to superior portfolio performance.
- Applied regulatory expertise to guide the development of a comprehensive compliance framework that aligned with financial regulations like the Dodd-Frank Act, MiFID II, Sustainable Finance Disclosure Regulation (SFDR), Article 6, 8, 9 funds.
- Demonstrated a deep understanding of the project's objectives, including ESG metrics, risk management models, and enhancement to multi factor models. Documented the project scope, encompassing various, credit, and liquidity risk management, and real-time ESG monitoring to ensure alignment with industry standards and organizational goals.
- Leveraged requirement elicitation techniques including JAD, interviews, and brainstorming to engage with Traders, Investors, Compliance & Risk Analysts to gather comprehensive project requirements, documented the Business Requirement Documents and monitored financial, reputational risk to ensure compliance with Capital Requirements Regulation (CRR).
- Analyzed system architectures and workflows to develop business solution models. Utilized visual modeling tools like Use Case Diagrams, Sequence Diagrams, and Entity-Relationship Diagrams to ensure clear communication and alignment across teams.
- Created and maintained essential Scrum artifacts, including the Product Backlog, Sprint Backlog, Definition of Done (DoD), and Definition of Ready (DoR) to facilitate streamlined and successful releases. Collaborated with the product manager to define critical criteria such as Acceptance Criteria for the user stories and Minimum Viable Product (MVP) for release planning.
- Engaged in Sprint ceremonies, including Daily Standup, Sprint Planning, Sprint Review, and Sprint Retrospective. Provided critical insights during Daily Standup to align project progress with business objectives. Facilitated informed decision-making by conveying the impact of developments on requirements and user stories during Sprint Planning. Actively contributed to Sprint Review and Retrospective, fostering feedback-driven improvement, and optimizing project outcomes.
- Assisted in integrating financial models that incorporated Regression Analysis, leveraging Fama French Three Factor Model and Arbitrage Pricing Theory (APT) calculations to evaluate investment opportunities' profitability and viability. These models were enhanced with Factor-based Modeling to provide a comprehensive assessment of potential Investment Returns and Risks.
- Implemented a comprehensive data integration and processing system utilizing key components like Amazon S3 for data storage, AWS Glue to do ETL process on various data sources including ESG Data, Market Data, and Risk Data. This integration facilitated streamlined data storage, flow, and transformation for processing during the later stages of analysis.
- Utilized a range of tools, including AWS EC2 for compute capacity in cloud, Amazon S3, API Gateway, and AWS Redshift for trade data storage & performance analysis report generation. This included the integration of ESG Momentum Strategy, Risk Control Framework, and Multi Factor Models. These components enabled complex business model analysis.
- Designed and implemented databases, data table structures, and schemas, while incorporating Online Analytical Processing (OLAP) operations. Orchestrated seamless data exchange & data transfer between the front-end and back-end systems.
- Established a Restful API, serving as a gateway for displaying data within the front-end application. Additionally, I facilitated data interactions with back-end systems using SOAP API protocols to ensure comprehensive data integration in all phases.
- Proficiently harnessed SQL queries, incorporating intricate joins and aggregate functions, to conduct critical data analysis. Used performance metrics to optimize system performance, identify areas for enhancement, and data-driven decision-making.

- Utilized large datasets to conduct in-depth analysis, including calculating averages, pinpointing peak usage hours, and extracting actionable insights. Contributed to project efficiency and performance improvements through data-driven strategies.
- Collaborated with quality assurance team to formulate Test Plans, Test Cases, Test Scripts, and Test Data, ensuring thorough coverage of testing specifications and requirements. Managed issues and defects through the Bug Life Cycle Management, utilizing industry-standard tools for streamlined Bug Tracking and documentation through Jira and Confluence.
- Integrated with the quality assurance team in leveraging a variety of testing methods, including black-box testing, white-box testing, integration testing, system and user acceptance testing and helped in updating the Requirement traceability matrix.
- Established an advanced decision support system with features such as a Real Time Data Streaming using AWS Kinesis, Data Visualization, Reporting, and Dashboard powered by Tableau and AWS QuickSight. AWS Cognito for user authentication.
- Synchronized with cross-functional, self-organizing teams, ensuring adaptive and dynamic processes, fostering seamless communication with stakeholders, including the Product Manager. Assisted in Software Release and offered Release Notes, User Training Documentation and training videos, enhancing Project Impact and alignment with project objectives.

Environment: Agile Scrum, JIRA 9.0, Confluence 7.13.7, Informatica PowerCenter 10.5, AWS Glue, AWS S3, AWS Redshift, AWS QuickSight, Tableau 2022.1, AWS Kinesis, Office 365, Postman 9.10.0, Swagger 3.1.0, Lucid Chart, RESTful API, SOAP API.

Business Systems Analyst

Salem, OR

December 2019 to July 2021

Summary: The objective was to Implement a modern enterprise budgeting and forecasting system for state department, streamlining budgeting and financial planning processes while enabling state-wide analytics and reporting. Develop templates, dashboards, and reports, providing insights into state budgets and forecasting. Train finance teams and ensure a smooth transition from legacy to new system.

Roles and responsibilities:

- Successfully achieved an improvement in budgeting and forecasting accuracy, alongside reduction in the time required for financial reporting and budget analysis. Additionally, increase in stakeholder satisfaction was observed.
- Documented functional, non-functional & business requirements document for the new budgeting and forecasting system based on the needs. Leveraged stakeholder input to prioritize requirements and identified the Minimum Viable Product (MVP).
- Aligned business requirements with technical capabilities and system design, ensuring feasibility and coherence across IT, finance, budgeting, and end-user teams. Streamlined integration for effective collaboration and optimized functionality.
- Developed the integration architecture and data flows between the budgeting and legacy systems. Conducted JAD sessions with the finance teams to comprehensively understand current budgeting processes, challenges, and pain points.
- Conducted Impact Analysis to assess potential disruptions and dependencies during the transition from legacy to the new system. Mitigated risks by addressing identified issues, ensuring a seamless and secure migration with less impact on ongoing operations.
- Applied advanced data analytics methods to streamline budgeting and financial planning processes in the implementation of a modern budgeting and forecasting system. This data-driven approach drastically improved the efficiency of budgeting decisions.

- Employed forecasting models sourced from industry practices to enhance the accuracy of budget predictions. This strategic addition ensured that state could better plan and allocate resources. Employed cloud-based budgeting and forecasting solutions to enhance accessibility, scalability while reducing infrastructure costs. This strategic shift resulted in efficient budget management.
 - Implemented sophisticated strategies for enhanced operational efficiency, leading to a reduction in turnaround times and greatly enhancing overall productivity in budget planning. Identified and addressed bottlenecks in budgeting and forecasting workflows.
 - Formulated comprehensive test plans and test cases to validate system functionality and data accuracy, assuring the system's reliability. Orchestrated user acceptance testing sessions with state to ensure the system met business needs and user feedback.
 - Spearheaded bug identification and resolution, collaborating closely with the development team. Utilized Jira for efficient bug tracking, ensuring a stable system prior to implementation, enhancing overall performance and user experience.
 - Created detailed documentation and training materials using Confluence, tailored to user needs. Facilitated seamless adoption of the budgeting and forecasting system, empowering teams with the knowledge needed for effective utilization.
 - Supported in integrating DevOps practices to ensure continuous integration and delivery. This streamlined the deployment process, reducing downtime and enhancing the responsiveness of the modern budgeting and forecasting system.
 - Assisted in modeling the data, data mapping document, and data migration (ETL) initiatives within the Azure data factory, Informatica resulting in a robust data warehouse. These efforts optimized data storage, accessibility, and analytical capabilities.
 - Proficiently applied SQL to conduct Create, Update, Read, and Delete (CURD) operations, ensuring efficient data management and retrieval within the modern budgeting and forecasting system, enhancing overall data accuracy.
 - Conducted rigorous API testing using Postman, covering HTTP responses operations and endpoint validation. Additionally, documented APIs via Swagger, confirming integration points and promoting secure data exchange within the systems.
 - Empowered finance teams with data-driven insights, enabling them to make well-informed choices in budgeting and forecasting. This transformative shift resulted in highly accurate budget assessments and substantial boost in profitability for the state.
 - Leveraged data analytics and Tableau to design interactive dashboards, reports, and visualizations. These insights empowered decision-making, improved budget assessments, and supported profitability within the state's financial management processes.
- Environment: Waterfall-Scrum, JIRA, Confluence, Tableau, Informatica, Office 365, Balsamiq, Azure Data Factory, Azure Data Lake, Azure Stream Analytics, Azure Blob Storage, Postman, Swagger.

Business Systems Analyst

Deutsche Bank - New York, NY

June 2018 to November 2019

Summary: This project focused on enhancing a Treasury Management System (TMS) with the integration of trade finance, liquidity management, and Delivery Versus Payment settlement features. This comprehensive solution empowered users to efficiently manage treasury operations, streamline trade documentation, mitigate risk, and gain better control of cash, financial resource management.

Roles and responsibilities:

- Transformed the System by integrating Trade Finance and Liquidity Management capabilities, implemented compliance standards within the TMS, resulting in a notable reduction in regulatory

and compliance-related issues. Strategically introduced DVP (Delivery Versus Payment) settlement, effectively reducing counterparty risk in trade finance operations.

- Partnered closely with key stakeholders, including treasury team, Business units, Internal Auditor, External Auditor, Banking partners and finance teams, to gather requirements and ensure the project will meet their specific needs and goals.
- Established rigorous compliance standards within the Treasury Management System including real-time Office of Foreign Assets Control (OFAC) transaction screening, know your customer (KYC), and Anti-Money Laundering (AML) customer due diligence, and aligning controls with Sarbanes-Oxley Act and Gramm-Leach-Bliley act requirements.
- Collaborated with stakeholders to define and refine the vision and goals for the Treasury Management system project, utilizing SAFe principles to ensure alignment with organizational objectives and strategic themes. Gathered and analyzed business requirements, translating them into user stories and acceptance criteria to facilitate agile development practices.
- Proficiently employed UML (Unified Modeling Language) diagrams to model and document the system architecture, including activity diagrams, sequence diagrams, and use case diagrams. This systematic approach to system design and representation facilitated clear communication with the system architect, ensuring a well-structured and efficient solution for the system.
- Orchestrated key SAFe events, including Program Increment (PI) Planning, Solution Demo, and others, to ensure synchronized and efficient project execution, fostering alignment with Agile Release Trains and enhancing overall project success.
- Leveraged Azure Data Factory for ETL processes, ensuring efficient data integration and transformation. Utilized Azure Stream Analytics to gain real-time insights from streaming data, providing project stakeholders with latest information for effective decision-making. Utilized Azure Blob Storage and Azure Data Lake for secure and scalable storage of project data.
- Conducted comprehensive testing, including stress, sanity testing, UAT (User Acceptance Testing), regression testing, and performance testing, collaborating with stakeholders to create detailed test plans, test cases, and test data. This rigorous testing approach ensured the robustness and reliability of the Treasury Management System, contributing to its overall success.
- Utilized SQL for data management and analysis, including performing complex queries, joins, and aggregate functions to optimize system performance and extract actionable insights from large datasets. Enhancing the data-driven decision-making.
- Implemented API integrations, including RESTful and SOAP services, using tools such as Postman and Swagger, to enable seamless communication between the Treasury Management System and external institutions. These integrations facilitated secure data exchange for transaction processing, liquidity management, and real-time financial information retrieval.
- Created dynamic dashboards and reports using Azure Power BI. Utilized Azure Power BI's drag-and-drop interface and a wide range of pre-built visualizations, such as heat maps, bar graphs, to present project data in visually compelling & interactive ways.
- Leveraged Jira for streamlined project management, including task tracking, product backlog, sprint planning, sprint backlog, and issue tracking & resolution, while simultaneously utilizing SharePoint as a collaborative platform for document management, ensuring efficient communication, collaboration, document sharing, process mapping and version control.
- Enhanced project reporting and communication by establishing a streamlined process for automated report distribution through Azure Power BI. This innovation allowed stakeholders to effortlessly receive real-time project data, tailored to their specific needs. By harnessing the capabilities of Azure Power BI, we not only ensured timely and relevant insights but also facilitated a more data-driven decision-making culture within the organization, ultimately driving greater project success.

- Conducted user training sessions, empowering stakeholders with proficiency in utilizing the upgraded TMS with trade finance and liquidity management capabilities. Incorporated DVP (Delivery Versus Payment) settlement protocols to enhance trade finance operations, ensuring secure and simultaneous exchange of assets and payments, thus reducing counterparty risk.

Environment: SAFe Agile, Azure Data Factory, Azure Data Lake, Azure Stream Analytics, Azure Blob Storage, Azure SQL Database, Office 365, Jira, SharePoint, Postman, Swagger, Balsamiq, Talend, PowerBI.

Senior Business Analyst

Reliance Capital - Mumbai, Maharashtra

March 2017 to May 2018

Summary: The project aimed to enhance the efficiency and accuracy of credit risk assessment and management processes, streamline data storage and analysis, and improve decision-making for financial institutions. This solution aimed to provide real-time access to credit data, reduce operational costs, and enhance risk prediction models, ultimately contributing to better risk management and more informed lending decisions.

Roles and responsibilities:

- Implemented a comprehensive solution that contributed to improvement in the efficiency and accuracy of credit risk assessment and management processes. This project streamlined data storage and analysis, significantly reduced operational costs, and improved risk prediction models, resulting in more informed lending decisions. The solution also provided real-time access to credit data, fostering enhancement in risk management capabilities for financial institutions.
- Orchestrated the incorporation of scenario analysis capabilities, a crucial feature that enabled financial institutions to assess and prepare for potential economic or market fluctuations and their potential impact on credit portfolios.
- Ensured a comprehensive and holistic approach to risk management throughout the project. This approach aimed to create a lending environment that was not only efficient but also highly resilient in the face of challenges. Aligned the project with established industry standards for risk management and data analysis, incorporating best practices in credit risk assessment.
- Collaborated with cross-functional Agile teams, actively participating in Agile ceremonies that included Backlog Refinement, Sprint Planning, Daily Standups, Sprint Reviews, and Retrospectives & Sprint Demo to demonstrate the increment.
- Engaged in Agile PI (Program Increment) Retrospectives, a critical practice that involved identifying areas for improvement and implementing actions to enhance project efficiency. Ensured strict compliance with industry standards and regulatory requirements, which significantly contributed to the project's overall success and its adherence to compliance standards.
- Designed and deployed an enterprise data warehouse and data lake leveraging cloud data platforms to establish a unified data foundation. Built a scalable structured data warehouse and unstructured data lake. Leveraged cloud based ETL and data catalog services to automate complex data workflows. The modern architecture enabled advanced analytics on integrated data.
- Developed real-time ETL processes using cloud streaming, batch processing and orchestration services. Ingested real-time data feeds into streaming pipeline for processing. Transferred data between sources and destination through managed ETL jobs.
- Implemented RESTful APIs to facilitate data exchange between the Credit Risk Assessment system and external data sources. These APIs played a pivotal role in real-time data retrieval, enabling the assessment of credit risk with up-to-the-minute data. The use of RESTful APIs enhanced accuracy and timeliness of risk assessments, contributing to informed lending decisions.
- Utilized Jira for efficient project management, including task tracking, sprint planning, and issue resolution, and integrated Confluence as a collaborative platform for documentation, ensuring seamless

communication, document sharing, and version control. This combination enhanced project organization and collaboration, contributing to the project's overall success.

Environment: Waterfall, JIRA, Confluence, Informatica PowerCenter, Tableau, MS Office, Figma, RESTful API.

Business Analyst

Edelweiss Financial Services - Mumbai, Maharashtra

November 2015 to February 2017

Summary: The project aimed to develop a comprehensive portfolio optimization system that leveraged user inputs and integrated the Markowitz model and Fundamental Analysis techniques. The scope included the creation of a user-friendly interface for inputting individual investment preferences, risk tolerance, and financial goals. The resulting model portfolios provided actionable investment recommendations tailored to users' objectives, risk profiles, and market conditions, facilitating more informed and personalized investment decisions.

Roles and responsibilities:

- Delivered a comprehensive portfolio optimization system that realized increase in user-specified investment preferences and enhancement in risk tolerance assessment. The integration of the Markowitz model and Fundamental Analysis techniques led to improvement in actionable investment recommendations tailored to users' objectives.
- Partnered extensively with stakeholders, including portfolio managers, financial advisors, and investors to deeply understand end-user requirements and design an intuitive interface for capturing investment preferences, risk tolerance, and financial goals.
- Supervised detailed requirement gathering sessions and stakeholder interviews to ascertain the project's scope and objectives in portfolio optimization. Translated stakeholder insights into precise requirement documents for asset class diversification.
- Spearheaded the design of personalized model portfolios by integrating proven optimization techniques, including the Markowitz model for optimized asset allocation based on risk-return tradeoffs. Conducted in-depth fundamental analysis on individual assets, evaluating financial statements, competitive advantages, and industry trends to determine their intrinsic value.
- Developed flexible quantitative models that adapt to unique investor risk profiles and real-time market conditions by integrating live data feeds and macroeconomic indicators to enable personalized and timely investment recommendations.
- Performed a thorough GAP Analysis comparing the current (AS-IS) and desired (TO-BE) states of portfolio optimization. Created a comprehensive Business Process Model and Notation (BPMN), leveraging Microsoft Visio, to visualize asset allocation.
- Collaborated with development and UI/UX teams to ensure a seamless integration of the multi-asset class model portfolio optimization. Maintained a continuous feedback loop with stakeholders to improve the model for optimal portfolio performance.
- Actively participated in Scrum ceremonies to encourage collaboration and iterative development. Ensured effective interaction between the development team and stakeholders to maintain project alignment and deliver optimal portfolio optimization.
- Established and managed a comprehensive Requirements Traceability Matrix (RTM) to bridge the gap between development and testing teams across multiple sprint iterations. Ensured that defects were linked accurately to specific requirements.
- Led and executed UAT tests, closely working with end users to validate software releases, ensuring rigorous testing and adherence to quality standards. Actively participated in diverse testing types, including Smoke, Sanity, Load/Stress, Regression, End-to-End, and Integration testing, to ensure the robustness of multi-asset class portfolio optimization.

- Performed API testing using Postman to validate JSON-based RESTful services, which were crucial for fetching and updating asset class data.
 - Proficiently executed a variety of SQL queries, encompassing Data Definition Language (DDL), Data Manipulation Language (DML) commands to maintain data integrity and quality. Led the design and development of dynamic dashboards and reports using Tableau, configuring actions and filters to align with end-user specifications and preferences.
 - Maintained a centralized repository on Confluence, housing vital business artifacts. Linked JIRA issues to the repository, enhancing information retrieval and promoting collaboration, particularly in multi-asset class modeling.
 - Spearheaded the strategic buildout of advanced analytical capabilities, harnessing the power of statistical modeling and predictive analytics to finely optimize asset selection and enhance overall portfolio performance, establishing a robust system.
- Environment: Waterfall, JIRA, Confluence, Informatica, QlikView, Postman, Swagger, Office 365, MS Visio, draw.io.

Jr Business Analyst

Angel One Limited - Mumbai, Maharashtra

June 2015 to November 2015

Summary: The project objective was to enhance its trading application by integrating order management capabilities, implementing fraud detection mechanisms, and incorporating a suite of powerful technical analysis tools. This initiative aimed to provide investors with a comprehensive and secure trading experience, enabling efficient order execution, safeguarding against fraudulent activities.

Roles and responsibilities:

- Successfully enhanced the trading application, realizing improvement in order management capabilities, boost in advanced fraud detection mechanisms, and the seamless integration of a suite of powerful technical analysis tools, contributing to increase in investor satisfaction and secure trading experiences.
- Led a cross-functional agile team to enhance a trading application by integrating robust order management capabilities, implementing advanced fraud detection mechanisms, and incorporating a suite of powerful technical analysis tools. The project aimed to provide investors with a comprehensive and secure trading experience, facilitating efficient order execution, safeguarding against fraudulent activities, and empowering users with data-driven insights for more informed investment decisions.
- Partnered with agile teams, including developers, data scientists, quant developers, and cybersecurity experts, to execute on project's objectives of strengthening order management, enhancing fraud detection, & incorporating technical analysis capabilities.
- Conducted requirements analysis and documentation efforts, capturing business needs, user stories, detailed specifications, integrations, and workflows related to order management, fraud detection, and technical analysis.
- Led critical advancements in order management by fostering a collaborative synergy with developers to seamlessly integrate intricate execution algorithms, catering to market, limit, and stop loss order types at scale. The concerted effort resulted in a marked optimization of latency and an unparalleled boost in system performance.
- Advocated enhancements in fraud detection by orchestrating a strategic partnership with data teams. Together, we implemented sophisticated business models capable of real-time analysis, identifying user behavior patterns and swiftly detecting anomalies. This predictive monitoring extended across pivotal risk vectors, fortifying our defense against fraudulent activities.

- Directed the buildout of a technical analysis suite through coordination with quant developers to construct statistical modeling, sentiment analysis, pattern recognition, volatility forecasting, and back testing tools to uncover alpha-generating signals.
 - Focused the development of comprehensive test plans encompassing a wide spectrum of testing types, including functional, integration, and user acceptance testing, through specialized tools like Jira and TestRail. These robust testing methodologies from individual functionalities to system-wide performance, was rigorously evaluated, leading to a more robust and reliable product.
 - Implemented Tableau for data visualization to track user adoption metrics, providing interactive data dashboards for showcasing ROI and areas for further optimization to key stakeholders. Utilized Confluence for streamlined documentation and collaboration, ensuring efficient project organization, knowledge sharing, and version control for all project artifacts.
- Environment: Waterfall, JIRA, Confluence, Informatica, Office 365, TestRail, MS Office, HP ALM, MS Excel.

Education

Bachelors of Technology in Automotive Engineering in JNTUH, Hyderabad

2015

Skills / IT Skills

- Stakeholder Management, Change Management, Impact Analysis, Risk Management, Cost-Benefit Analysis, ROI Analysis, JAD Sessions, Financial Reporting & Analysis, SWOT analysis, Discounted Cash Flow & Dividend Discount Modelling.
- Financial Systems
- Bloomberg Terminal, S&P Capital IQ, FactSet, Morningstar.
- Requirement Management
- Jira, Confluence, SharePoint, MS Office, MS Excel.
- SDLC Methodologies
