parshwashahfyb82_d6r@indeedemail.com

+12017088568

Accomplished Senior Business Systems Analyst with 8 years of experience in the Finance domain. Skilled in optimizing financial software systems, streamlining business processes, and aligning them with organizational needs. Proficient in Financial Process Management and Modeling. Expertise in Banking, mortgage, Investment Management, Capital Markets, Wealth Management, Investment Associations, Financial Systems, Private Equity, and Treasury Management fields. A strategic thinker driving innovation in financial portal development, AWS, Salesforce, and Azure migration, API implementation, trading enhancement, payment systems, fraud detection, and data warehouse & migration projects. Bringing multifaceted management perspectives and a track record of success. Ready to merge financial expertise with cutting-edge business strategies for transformative impact.

- Expertise in Banking, Mortgage corporate finance, valuation, SWIFT, ACH, FP&A, treasury management, financial reporting, hedge funds, private equity, venture capital, investment management, wealth management, and financial technology (Fintech).
- Spearheaded a transformative initiative, integrating Salesforce CRM to revolutionize the Account Opening Process, elevating system efficiency, data consolidation, and regulatory compliance (ISO 27001, NIST) for enhanced data security within the financial industry.
- Successfully led the implementation of a comprehensive securitization system for financial assets, ensuring compliance with SEC, FINRA, SOX, KYC, FCRA, GLBA, CFPB, GDPR, CCPA, Dodd-Frank Act, and Basel I, II, III guidelines in the fixed-income domain.
- Led the automation of financial statements analysis with seamless integration of AML software solutions, achieving efficient ratio calculations, trend analysis, GAAP, and anomaly detection while adhering to AML/CFT regulations such as the Bank Secrecy Act.
- Proficient in software development methodologies e.g., Waterfall, Scrum, SAFe, kanban, Scrumban, & Hybrid methodologies.
- Gathered business requirements by employing interviews, surveys/questionnaires, workshops, brainstorming, document analysis, focus groups, JAD, storyboarding, data mining, reverse engineering, contextual inquiry, user story mapping, and Delphi technique.
- Performed documentation like Business Requirements Document (BRD), System Requirements Specification (SRS), Functional Requirements Document (FRD), Requirement Traceability Matrix (RTM), Business Case Document, Systems Design Document, Use Case Document, User Stories, Process Flow Diagrams, Data Flow Diagrams, Entity-Relationship Diagrams (ERD), User Manuals.
- Optimized business performance through extensive analysis methods such as Gap, Impact, Stakeholder, feasibility, risk, cost-benefit, SWOT, root cause, and competitive analysis. Comprehensive assessments guided informed decision-making, effectively mitigated risks, and facilitated the optimization of operational processes. By leveraging insights, we streamlined

operations, identified areas for improvement, and strategically enhanced overall business functionality, ensuring sustained growth and competitiveness.

- Utilized MS Visio, Lucidchart, Balsamiq, Figma, FigJam, Adobe XD, and BPMN tools to create UML (Sequence, Activity, Use Case), BPMN diagrams, wireframes, and prototypes, ensuring clear visualization and effective communication in software development.
- Experienced in Scrum environment, actively participating in Sprint Planning, Daily standup, Sprint Review, and Sprint retrospective and documented Product Backlog, Sprint backlog, and burn-up/burn-down charts, High and low-level grooming sessions.
- Assisted Product Owner in requirement elaboration, defining MVP, Definition of Done (DoD), and writing acceptance criteria.
- Applied prioritization techniques like MoSCoW, KANO model, Value-based prioritization, Pairwise comparison, 100-dollar method, Theme scoring, Weighted scoring, Analytic Hierarchy Process (AHP), Cumulative voting, Bubble Sort, and Poker Planning.
- Implemented estimation techniques like expert judgment, Analogous estimation, Parametric estimation, Three-point estimation (PERT), Bottom-up estimation, Top-down estimation, Planning poker, Bucket system, T-shirt size estimation and Story points
- Utilized JavaScript, HTML, and CSS to craft engaging interfaces, ensuring responsiveness across devices. Leveraging JavaScript's interactivity alongside HTML and CSS for intuitive designs, prioritizing usability and consistency for enhanced user experiences.
- Conducted code reviews using tools like GitHub, Bitbucket, or GitLab, ensuring compliance with coding standards and best practices. Collaborated with the team to identify areas for improvement, address potential issues, and enhance code quality and maintainability.
- Highly proficient in the management and processing of large-scale, complex data sets across disparate systems, adeptly utilizing big data technologies, including Spark, Scala, Kafka, and Hadoop ecosystem tools, aiding Business decisions.
- Proficient in data mapping, data profiling, ER diagrams, data cleansing, normalization, databases, data analysis, data integration, data modeling (Conceptual, Logical, and Physical), OLAP operations (Roll-up, Drill down, Slicing and dicing), and data governance.
- Directed successful data migrations, ensuring seamless alignment with business goals. Leveraged robust analysis and utilized Informatica PowerCenter for quality assurance and risk mitigation, streamlining efficient transfer processes.
- Spearheaded implementation of Salesforce CRM platform to create unified customer data repository, facilitate 360-degree view of interactions, enable personalized services, elevate system efficiency, consolidate data, and enforce rigorous compliance checks.
- Proficient in SQL, adept at crafting complex queries, utilizing various joins (inner, outer, left, right) to consolidate and analyze data from multiple tables. Skilled in creating and optimizing views to streamline data access and analysis. Experienced in SQL functions and stored procedures to enhance data processing efficiency, enabling comprehensive business insights and strategic decision-making.
- Developed and executed methodologies to enhance database performance and scalability, enabling efficient handling of substantial financial data volumes. Streamlined query efficiency and system responsiveness through optimization strategies.
- Implemented Relational Databases (MySQL, Oracle, SQL Server), NoSQL Databases (MongoDB, Cassandra, Redis), Data Warehouses (Azure Synapse Analytics, Amazon

Redshift, Google BigQuery), and Columnar Databases (Amazon Aurora).

- Proficient in utilizing data mining techniques and predictive analytics to extract valuable insights and patterns from extensive datasets. This expertise aids in forecasting trends and facilitating strategic business planning based on comprehensive data analysis.

- Proficient in effectively leveraging CI/CD testing using Jenkins to optimize pipelines, proactively streamline software development workflows, and successfully foster collaboration, thereby ensuring efficient and timely releases.

Additionally, I am highly skilled at expertly identifying automation opportunities and strategically aligning development processes.

- Strong understanding of web services, XML, JSON, CSS, and architectural concepts (System Architecture, Application Architecture, Data Architecture, Integration Architecture,) and API documentation using Swagger and performed API testing using POSTMAN.

- Led initiatives for optimizing API performance, utilizing strategies like caching, rate limiting, and leveraging API monitoring tools such as New Relic and Datadog. This ensured consistently high availability and optimized response times across the API infrastructure.

- Led the formulation of API governance strategies, guaranteeing alignment with industry benchmarks like REST and SOAP standards. Enforced best practices in API design to uphold uniformity, bolster security measures, and scale seamlessly within the API landscape.

- Expertise in implementing API security measures by utilizing OAuth, JWT, and API keys. Integrated cutting-edge API security solutions such as API gateways and firewalls for data protection, proactively thwart vulnerabilities, and ensure fortified system integrity.

- Executed development techniques like Test-driven (TDD), Behavioral driven BDD, & Acceptance test-driven development (ATDD).

- Collaborated with the QA team to implement a variety of testing including black-box, functional, and system testing. Employed Selenium, JIRA, and Cucumber tools to enhance test planning and execution processes, ensuring efficiency and accuracy throughout.

- Facilitated User Acceptance Testing (UAT), Accessibility Testing, and System Integration Testing (SIT) phases, employing tools like Katalon Studio, Accessibility Insights, Postman, and Cucumber to ensure comprehensive testing coverage and efficiency.

- Proficient in project management and business intelligence tools like JIRA, Trello, Microsoft Project, Confluence, Teamwork, Wiri/Wiki, Microsoft Teams, SharePoint, Tableau, SQL Server Reporting Service (SSRS), Power BI, Whiteboard, and MicroStrategy.

- Highly adept with Service-Oriented Architecture (SOA) principles, identifying modular services aligned to business capabilities, and guiding development teams to build secure and reusable services to enable organizational agility and digital transformation.

Work Experience

Sr. Business Systems Analyst

PNC BANK - Pittsburgh, PA

November 2021 to Present

Salesforce CRM Integration for Streamlined Account Opening and Compliance Enhancement

PNC, a prominent financial services provider, embarked on a strategic initiative aimed at optimizing its account opening process. To achieve this, the company chose to leverage Salesforce, an integrated Customer Relationship Management (CRM) system. This decision marked a significant shift from the previously fragmented legacy processes to a unified system, resulting in improved consistency in workflows, compliance standards, and data management across all its products.

Roles and Responsibilities:

- Leveraged Salesforce platform to create a unified customer data repository, facilitating a 360-degree view of client interactions and transactions, enabling personalized services, and improving overall customer satisfaction and Streamlined

Account Opening.

- Designed and implemented custom Salesforce Lightning components and Visualforce pages to meet specific project requirements, enhancing the user experience, and enabling tailored functionalities for financial services and compliance needs.

- Developed comprehensive documentation including Business Requirements Document (BRD), Functional Requirements Document (FRD), System Requirements Specification (SRS), and User Manuals using Confluence for content collaboration.

- Conducted stakeholder interviews, workshops, and Joint Application Development (JAD) sessions to elicit, analyze, and prioritize business needs and functional requirements and performed gap analysis, As-is, and To-be analysis on the AOX process.

- Collaborated with stakeholders to align the organization's objectives, system capability, and financial regulatory guidelines.

- Employed techniques like MoSCoW (Must-have, Should-have, Could-have, Won't have) to prioritize project requirements based on business value, risk and leveraged

Story Points and Planning Poker to accurately estimate the effort and duration.

- Utilized UML diagrams such as use case, sequence, and activity diagrams using tools like Visio and Lucidchart to visually represent securitization workflow, system interactions, and data flows in the securitization system for asset-backed securities.

- Employed mockups and wireframes using tools like Figma, Adobe XD, and InVision while also leveraging prototyping tools like Marvel and Proto.io. Implemented UAT test cases in HP ALM to verify implemented software with stakeholders.

- Implemented JavaScript, HTML, and CSS within Salesforce Lightning components and Visualforce pages to create tailored functionalities and enhance the user experience, ensuring streamlined account opening and compliance enhancement.

- Facilitated key Scrum ceremonies (Backlog Grooming, Sprint Planning, Daily Stand-up, Sprint Review, and Sprint Retrospective) for collaboration, transparency, and iterative development in alignment with Agile principles and established the Definition of Ready (DoR) and Definition of Done (DoD) criteria to ensure the clarity and completeness of requirements and deliverables.

- Leveraged OLAP (Online Analytical Processing) and OLTP (Online Transaction Processing). techniques within Salesforce CRM to analyze and gain actionable insights from extensive customer data, employing advanced data mapping and migration strategies to seamlessly integrate information from legacy systems, ensuring data consistency and accuracy in real-time interactions.

- Employed SQL extensively for tasks involving data retrieval, manipulation, and analysis, which encompassed optimizing complex joins and aggregation, applying filters, executing CRUD operations, creating stored procedures, and scheduling

CRON jobs for automation. Also utilized window functions for analytics and crafted scripts for ETL (Extract, Transform, Load) processes.

- Engineered ETL (Extract, Transform, Load) procedures for seamless data migration and integration among source systems by harnessing the capabilities of Informatica PowerCenter. This involved constructing workflows, mappings, transformations, SQL overridden tasks, scheduling sessions, and workflows, as well as implementing error and exception handling via event handlers.
- Leveraged Salesforce Einstein Analytics to build dashboards and self-service reports providing real-time visibility into customer onboarding metrics, sales performance, and operational KPIs. Integrated data from across Salesforce objects for holistic analytics.
- Successfully Configured and customized Salesforce CRM workflows, automation rules, and triggers to streamline data capture and processing, significantly improving the efficiency of customer onboarding processes and ensuring rigorous compliance checks.
- Collaborated with the Financial Services Commission (FSC) to ensure AML and KYC compliance within Salesforce, implementing robust security measures, role-based access control, and data governance to maintain data quality and regulatory adherence.
- Drove the implementation of comprehensive data governance initiatives within Salesforce CRM, which included the establishment and strict enforcement of data policies, industry-specific standards, and meticulously defined procedures to foster accountability, data ownership, and meticulous data management, ensuring data quality, accuracy, and regulatory compliance.
- Developed comprehensive CRUD (Create, Read, Update, Delete) for API documentation, detailing endpoints, payload structures, and conducted API testing (test cases, test plans) using tools like Postman to verify API functionality, integrity, & error handling.
- Precisely cataloged API response format (including 200 OK, 403 Forbidden, 500 Internal Server Error) and response parameters.
- Implemented and rigorously upheld robust data quality management strategies, meticulously ensuring the accuracy, consistency, and reliability of data to empower well-informed decision-making, all within the framework of stringent data governance protocols
- Conducted comprehensive user acceptance testing utilizing HP ALM to create test cases validating functionality against business requirements. Executed exploratory and scenario-based testing to ensure optimal usability and compliance.
- Worked with the QA team to create comprehensive end-to-end test strategies, defining test parameters, environments, and inclusive coverage. Created test scenarios and cases using Tricentis Tosca aligned with user stories, encompassing various edge cases. Recorded identified issues with accompanying screenshots in JIRA for transparent and streamlined issue tracking.
- Leveraged Jira, Confluence, and SharePoint to effectively manage, plan activities, monitor, document, & track progress.
- Utilized AWS QuickSight to create visually compelling dashboards and reports, enabling stakeholders to gain actionable insights, monitor key performance indicators (KPIs), and make informed decisions for the Securitization of Asset-backed securities.
- Created Tableau-based ROI reporting by establishing connections to SQL databases. Crafted tailored views integrating sophisticated calculations to assess profitability across various product lines and geographic regions

Environment: Salesforce, Visio, Lucidchart, Figma, InVision, JIRA, Confluence, SharePoint, AWS (QuickSight, API Gateway, Lambda, S3, RDS) Einstein Analytics, Informatica PowerCenter, SQL, Postman, HP ALM, Tricentis Tosca, Agile/Scrum
 NH Treasury Department, Concord, NH
 12/2019 - 11/2021

Sr. Business Systems Analyst

Migration of Wire Payments Infrastructure to Azure for Increased Capacity and Resilience

Enhanced the wire payments infrastructure by leveraging the power of Microsoft Azure, resulting in a significant increase in capacity, system resilience, and the ability to seamlessly process wire transfers without interruptions. This comprehensive project aimed to ensure the utmost customer satisfaction by seamlessly migrating the system to Azure, implementing robust security measures to safeguard sensitive data, and optimizing performance for enhanced efficiency and reliability.

Roles and Responsibilities:

- Gained Insights on AML, PCI, PII, FINRA ISO27001, SWIFT, NIST, Cybersecurity Framework, BCRs, OFAC, KYC, SLAs, Regulation E, EFTA, UCC, BSA, Federal Reserve Regulation J, NACHA Operating Rules, E-sign Act, PCI DSS, CCPA, GLBA, FCRA, CTF & SCCs.
- Conducted a comprehensive analysis of the current wire payments infrastructure (As-Is), identified gaps in scalability and resilience using Gap analysis, and defined future requirements (To-Be) to ensure high availability, disaster recovery, and SLAs.
- Crafted a comprehensive Business Requirements Document (BRD) delineating business needs, objectives, and capabilities. Subsequently, detailed Functional Requirements Document (FRD) specifying functionalities, processes, integrations, and workflows in alignment with the BRD. Ensured traceability between the two documents using a traceability matrix.
- Implemented essential Scrum artifacts (Product Backlog, Sprint Backlog, & Increment), for transparency and work prioritization.
- Employed Unified Modeling Language (UML) software like Lucidchart and Visual Paradigm to generate a range of diagrams, encompassing Use Case Diagrams and Sequence Diagrams, to illustrate the components within the wire payments system.
- Utilized Figma in conjunction with Adobe XD, Sketch, and InVision to design wireframes, mockups, and prototypes, ensuring a visual representation of user interfaces and system workflows within the wire payments system.
- Implemented Scrum methodology with regular ceremonies (Daily Stand-ups, Sprint Planning, Sprint Review, and Sprint Retrospective), defined Definition of Ready (DoR) and Definition of Done (DoD) criteria to ensure quality and completeness and employed MoSCoW prioritization technique and Planning Poker estimation technique for effective project planning.
- Facilitated SAFe ceremonies including ART (Agile Release Train) events like PI Planning, Daily Stand-ups, Iteration Planning, System Demo, and Iteration Review sessions to ensure effective collaboration, alignment, and aligning business objectives.
- Facilitated collaborative backlog refinement sessions to identify dependencies, risks, and enablers for user stories across multiple Agile teams. Aligned stories with Product Management's roadmap priorities, utilizing tools like Miro and dependency boards to visualize intricate relationships between epics and support elements across various teams and systems.
- Worked closely with System and Solution Architects to map features from Product Roadmap to existing and emerging system capabilities. Contributed to drafting Solution Intent, Solution Context, and Designing Program Increments. Planned Iterations and validated acceptance criteria to ensure alignment with architectural principles and non-functional requirements.
- Leveraged Online Analytical Processing (OLAP) techniques for analyzing wire payments data, performed data mapping and migration to seamlessly integrate data from legacy systems into Azure Synapse Analytics, employing Extract, Transform,

Load (ETL) using Azure data factory for efficient data processing and integration in both on-premises and cloud environments.

- Developed comprehensive Create, Read, Update, delete (CRUD) documentation for wire payments API, including endpoints, request/response formats, and error handling, and conducted thorough API testing (test plan, test case) using tools like Postman
- Methodically documented error codes (400 Bad Request, 401 Unauthorized, 404 Not Found, etc.), & response parameters.
- Partnered closely with the technical team to devise a strategic plan and propose the implementation of Azure Virtual Machines, App Service, and Blob Storage, ensuring these solutions aligned seamlessly with the wire payments system's scalability needs.
- Ensured secure data storage and robust access management by advocating for the adoption of Azure SQL Database and Active Directory within the wire payments infrastructure. Advocated for the implementation of Azure Key Vault to manage cryptographic keys securely, safeguarding sensitive payment data and complying with stringent security standards and regulatory requirements.
- Designed and optimized SQL queries, including creating views, performing joins, selecting data using, ordering using, grouping, aggregating data, and utilizing stored procedures for efficient data retrieval, manipulation, and reporting purposes using Select, OrderBy, GroupBy, Inner Join, Left Join, Right Join, and Full Join, also assisted in conceptual, logical, and physical data models.
- Collaborated across teams to define key data quality metrics and KPIs, enabling continuous monitoring and proactive resolution of data discrepancies through effective data governance. Executed comprehensive data profiling and cleansing campaigns, resulting in a notable 40% reduction in data errors, consequently elevating overall data management across critical systems.
- Executed User Acceptance Testing (UAT) to validate wire payments functionality, conducted sanity tests to ensure basic system functionality using Selenium, assisted in developing a comprehensive Test Plan, Test Cases, and Test Scenarios, and maintained a Requirement Traceability Matrix (RTM) to ensure test coverage and traceability of requirements aligning to business rules.
- Utilized Azure DevOps Server, SharePoint to ensure collaboration, task tracking, document management, & progress monitoring.
- Developed interactive dashboards using Power BI, enabling stakeholders to gain real-time insights into wire payments performance, trends, and key metrics, facilitating data-driven decision-making and enhancing transparency.
- utilized Jira and Confluence to streamline project management, fostering seamless collaboration, task tracking, documentation, and knowledge sharing across teams involved in wire payments infrastructure enhancements and Agile development initiatives.

Environment: Scaled Agile Framework (SAFe), Microsoft Azure (Virtual Machines, Synapse Analytics, App Service, Blob Storage, SQL Database, Active Directory, Key Vault, Monitor, Log Analytics, Backup, Security Center, Load Balancer), Jira, Confluence, Postman, Azure DevOps Server, SharePoint, Power BI

Business Systems Analyst

HSBC - New York, NY

March 2018 to August 2019

Bank Fraud Detection, Prediction, and Prevention Platform

Created a comprehensive bank fraud detection, prediction, and prevention platform that utilizes advanced analytics, scalable machine learning models, and robust data governance to effectively detect and mitigate various types of fraud. The platform aims to significantly reduce financial losses, ensure compliance with

AML/KYC regulations, and foster stronger customer relationships by proactively managing fraud risks.

Roles and Responsibilities:

- Implemented compliance with CCPA, ITADA, AML, KYC, OCC, FinCEN, PCI DSS, GAAP, Regulation-E, FTC, SOX, ISO 27001 Check 21 Act, NIST Cybersecurity, and PIPEDA and identified gaps in detecting fraud in the areas like identity theft, cash fraud, billing fraud, check tampering, Phishing and Social Engineering, financial statements fraud, and internal fraud/cheque kiting.
 - Prepared detailed Business Requirements Document (BRD) outlining the specific requirements for each fraud detection category. Developed Functional Requirements Document (FRD) and System Requirements Specification (SRS) to document the system's platform's desired functionality and technical specifications, Process Flow Diagrams and Data Flow Diagrams,
 - Created UML diagrams (Use Case, Activity, Deployment), mockups, and wireframes to visually represent the fraud detection platform's architecture, user interfaces, and workflows, ensuring effective fraud pattern recognition and anomaly detection.
 - Implemented Scrum framework with regular ceremonies including daily stand-ups, sprint planning, sprint review, spike, and Sprint retrospective. Defined a clear Definition of Ready (DOR) and Definition of Done (DOD) for each fraud detection feature.
 - Utilized MoSCoW (Must Have, Should Have, Could Have, Will Have) with the Focus group, the technique for prioritizing fraud detection capabilities and features, and employed T-shirt sizing estimation techniques with stakeholders for accurate estimation.
 - Leveraged OLAP techniques (multi-dimensional online analytical technique) for multidimensional analysis of fraud patterns and implemented data mapping and migration processes to ensure seamless integration of fraud data from multiple sources.
 - Established an Amazon RedShift as a centralized data warehouse to store and analyze fraud-related data efficiently. Utilized ETL (Extract, Transform, Load) using AWS Glue for smooth data integration between different databases and cloud platforms.
 - Developed comprehensive CRUD documentation for the fraud detection platform's API, allowing seamless interaction with external systems. Conducted thorough API testing (plan, cases) using tools such as Postman to ensure its reliability and security.
 - Utilized SQL like SELECT statements for data retrieval, ORDER BY for result sorting, Update, and GROUP BY for aggregating data.
 - Conducted User Acceptance Testing (UAT) to validate the fraud detection platform's functionality and ensure it meets business requirements and developed comprehensive test plans, test cases, and test scenarios to cover various fraud detection scenarios.
 - Spearheaded the development of meticulous data governance guidelines, ensuring streamlined data classification, precise access controls, and efficient data management. Engaged in data stewardship, facilitating collaboration with business units to ensure data precision, consistency, and regulatory compliance, firmly supported by robust data governance practices.
 - Utilized tools like Jira for project tracking, communicating, visualizing activities, planning, tracking, and monitoring, Confluence for collaboration, sharing, and documentation, and SharePoint for centralized document management.
 - Implemented dashboards to visualize fraud detection insights and trends effectively and leveraged by Amazon QuickSight.
- Environment: Hybrid Scrum, Postman, AWS (Lambda, S3, Redshift, Glue, SageMaker, CloudWatch, IAM, KMS, and CloudTrail) JIRA.

Business Analyst

Axis Bank - Mumbai, MH

November 2016 to January 2018

Automation of Financial Statements Analysis with AML Integration

The project objective was to develop an algorithm for automating financial statements analysis, incorporating Anti-Money Laundering (AML) software solutions like OFSAA, Actimize, & Mantas. This involved executing ratio calculations, trend analysis, and anomaly detection. Worked in a hybrid methodology combining

Waterfall and Scrum.

Roles and Responsibilities:

- Demonstrated proficiency in analyzing financial statements, including income statements, balance sheets, and cash flow statements, employing statistical techniques, ratio analysis, and trend analysis to uncover patterns and derive insights from data.
- Conducted comprehensive GAP analysis, assessing current and desired states, performing impact, risk, cost-benefit analyses, and feasibility studies (SWOT and PESTLE). Evaluated both business and technical risks thoroughly.
- Translated business requirements documented in the BRD into epics and user stories, defining acceptance criteria, and contributing to definition of ready (DOR) and definition of done (DOD) for the Potentially Shippable Product Increment (PSPI).
- Utilized UML diagrams like use case diagrams, class diagrams, sequence diagrams, & activity diagrams, to visualize data flow.
- Actively participated in Scrum ceremonies, including Sprint Planning Meetings, Daily Stand-ups, Sprint Review Meetings, and Sprint Retrospective Meetings, working towards achieving sprint goals. Acted as a Scrum Master for 6 months.
- Utilized Jira to create and maintain artifacts like User Stories, Product Backlogs, & Sprint Backlogs, & employed Scrum Boards.
- Utilized AWS Lambda, Amazon S3, Amazon EC2, Amazon Redshift, Amazon Glue, Amazon SageMaker, Amazon RDS, and Amazon CloudWatch to streamline and automate financial statements analysis with AML integration in the project.
- Utilized SQL operations like SELECT, UPDATE, JOINS, and UNION in databases like Oracle, and MS SQL Server to manage data.
- Leveraged web services and APIs to directly communicate with banks and retrieve statements, balances, and transaction data.
- Implemented BI and reporting tools like LEAD BI to construct analytical data models, to identify valuable business opportunities.
- Diligently monitored and audited data flows, consistently identifying potential data quality issues and proficiently implementing corrective actions to uphold the data integrity, driven by a solid foundation in data management and data governance.
- Contributed to the QA team by assisting in the development of test strategies and test plans for various testing processes, including load testing, smoke testing, sanity, UAT, and regression testing, and diligently tracked and reported defects using Jira.

Environment: Waterfall-Scrum Hybrid, MS Office (Word, Excel, PowerPoint), MS Visual Studio, Tableau, JIRA, GitHub, MS SQL Server, Confluence, MS Visio, SOAP, XML, COBOL, JCL, AWS (Lambda, S3, EC2, Redshift, Glue, SageMaker, RDS,

Business Analyst

Edelweiss Asset Management Limited - Mumbai, MH
February 2016 to October 2016

Investment Portfolio Dashboard Enhancement for Enhanced Decision Making and Performance Tracking

The project upgraded the portfolio dashboard, empowering decision-makers with advanced tools for investment management. This revamped dashboard offers comprehensive performance insights, advanced analytics, portfolio views, and integrates feedback from analysts and managers. These enhancements support asset management, reporting, and performance tracking for existing investors.

Roles and Responsibilities:

- Created comprehensive Business Requirements Documents (BRDs) outlining project goals, scope, business rules, assumptions, constraints, data elements, and reporting requirements. Collaborated with stakeholders to finalize BRDs.
- Conducted GAP analysis to assess the current state (AS-IS) of the project and define the desired future state (TO-BE).
- Utilized various risk measurement techniques such as VaR (Value at Risk) calculations, including historical method, Variance-covariance, and Monte-Carlo Simulation for IRA (Individual Retirement Account) opening.
- Collaborated closely with cross-functional teams, including finance, risk management, and IT, to elicit, analyze, and document business requirements, ensuring a clear understanding of project scope, objectives, and success criteria.
- Assisted in the analysis of complex financial data using various statistical and data analysis techniques, such as variance analysis, trend analysis, and financial ratio calculations, to identify patterns and anomalies, supporting data-driven decision-making.
- Actively participated in process improvement initiatives by conducting thorough business process mapping (BPM).
- Developed the Requirement Traceability Matrix (RTM) and provided weekly progress reports for project tracking.
- Utilized Microsoft Project for task allocation, scheduling, resource management, progress tracking, and project reporting.
- Executed SQL queries for data extraction and manipulation, including DML (Data Manipulation Language) and DDL commands.
- Conducted high and low-fidelity prototyping using Mock-Up Screens and Wireframes based on project requirements.
- Created data visualization reports using Tableau to provide executives with comprehensive variable analysis of business metrics.
- Assisted in the formulation of testing documents such as Test Plans and Test Summary Reports, and developed Test Scenarios.

QA Engineer

Software Testing

August 2015 to January 2016

Enhanced Order Confirmation and Real-Time Product Status Reporting

The project targeted an Enterprise Data Warehouse for tracking Credit and Debit

Card fraud, utilizing SAP HANA as the database. This allowed real-time monitoring and custom reporting without external tools. Supported by private equity firms, the initiative received capital and strategic guidance for successful implementation

Roles and Responsibilities:

- Collaborated with stakeholders in the financial domain during Joint Application Development (JAD) sessions to gather detailed requirements for a Data Warehouse system aimed at tracking and preventing Credit Card and Debit Card fraudulent actions.
- Contributed to all phases of the software testing lifecycle, ensuring adherence to quality standards and best practices.

- Updated Requirements Traceability Matrix (RTM) and actively participated in defining entry and exit criteria for STLC phase.
 - Played a key role in effort and cost estimation, baselining the Test Plan document, and reviewing the Test Strategy.
 - Created, documented, and maintained comprehensive test cases, test data, and test scripts using HP Quality Center.
 - Executed GUI Testing, User Acceptance Testing (UAT), and manual testing, evaluating system performance.
 - Monitored the Software Testing Lifecycle (STLC) process, actively logging and prioritizing issues in the Issue Log.
- Environment: Waterfall, HTML, CSS, SharePoint, SQL, SWOT, MS Excel, MS PowerPoint, HP QC, Confluence.
