

SHIKHAR SINHA

San Francisco, CA

shikharsinhaz9fam_35p@indeedemail.com

+1201-426-4242

- Healthcare professional specializing in compliance HIPAA, HITECH, HITRUST, GDPR and coding standards ICD-10, SNOMED, RxNorm, LOINC. Proven skills in information systems LIMS, ELN, SDMS, EDMS, EHR, CTMS with expertise in EDI, HL7 interface, and MMIS, adept at resolving claims processing issues, emphasizing PHI (protected health information)
- Understanding of insurance policies such as Health Maintenance Organization (HMO) and Preferred Provider Organization (PPO), experience with EDI transaction codes such as 270/271, 276/277, 278, 834, 835/837, 470, 820, 999.
- Expertise FACETS for health insurance operations, covering claims processing, provider management, and premium billing. Demonstrated expertise in claim adjustment mechanisms, overseeing end-to-end workflows and conducting in-depth reviews with root cause analysis in providing target solutions for seamless claim process within industry standards.
- Profound knowledge in Feasibility studies, Cost-Benefit Analysis, SWOT analysis, Root Cause Analysis, Impact analysis, Competitive analysis, and GAP analysis. Applied risk analysis methodologies to comprehend business process modeling.
- Experienced in Managing software systems development using a range of methodologies, including Waterfall, Waterfall-Agile Scrum (Hybrid), Scrum, Kanban, Scrum-ban, Scrum-Fall, and Scaled Agile Framework (SAFe) environments. The software system development life cycle (SDLC) and product life cycle (PDLC) for seamless project delivery and execution.
- Expertise in gathering requirements with Business and Technical Stakeholders for Joint Application Development Sessions, interviews, and prototyping, Questionnaire and surveys, for eliciting both Functional and Non-Functional requirements.
- Actively collaborated on team efficiency by supporting Project Managers in crafting precise Work Breakdown Structures (WBS) and applying Critical Path Analysis (CPA). Implemented advanced analytical techniques, including Trend Analysis and Monte Carlo Simulation, to facilitate team's capacity for data-driven and decision-making in project management.
- Expertise in drafting project artifacts such as Business requirement document (BRD), functional requirement documentation (FRD), System requirement Specification document (SRS), Product Requirement Document (PRD) Requirement Traceability Matrix (RTM), Risk register, RACI matrix, Project charter, Change request document.
- Implemented BPMN best practices organization-wide, mentoring new team members. Utilized tools like Figma, Lucid chart, and Draw.io for creating process visualizations, UML diagrams, prototypes (low and high fidelity) Mockup, wireframes.
- Actively engaged in Scrum ceremonies, backlog grooming, release planning, sprint planning, daily standups, sprint review meetings, sprint review retrospective meetings and SaFe such as PI planning, Po Sync Art Sync.
- Collaborated with product owner in defining Project Scope, product vision, objectives, user stories, Minimum Viable Product (MVP), Minimum Release Feature (MRF), Minimum marketable feature (MMF), Key performance indicators(KPI)
- Maintained scrum artifacts such as Statement of Work (SOW), product backlogs, sprint backlogs, product increment, velocity charts, and information radiators, such as sprint burndown charts and product burndown charts.

- Experienced in prioritization & estimation techniques MoSCoW, KANO, Dot voting method, 100-point method and value stream mapping, Planning poker, T-Shirt Sizing, Relative mass evaluation, Affinity mapping proficient in performing horizontal slicing vertical slicing and epics to decompose them into user stories for Feature and Component based teams.
- Solid experience in building user stories that match INVEST criteria. Created acceptance criteria, Definition of Ready and Definition of Done while taking SMART criteria into account and in coordination with product owners and scrum team.
- Expertise in online transaction processing (OLTP) and online analytical processing (OLAP) operation including ROLAP, MOLAP and HOLAP and experience in performing OLAP operation like Roll-up, Drill down, Slicing, Dicing, and pivot tables.
- Instituted data models (conceptual, physical and logical) for clear data structure definition facilitating effective communication between business and technical team. database design, data integration and impact analysis ensuring data governance conducted in-depth exploration of source system analyzing data structure, relationship processes
- Experienced in Data profiling and comprehensive quality assessment to ensure data integrity collaborated with technical teams to understand the Extract-Transformation-Load (ETL) process, Schemas (Star, Snowflake, Galaxy) using tools like Informatica PowerCenter to perform ETL jobs, mapping requirements and coordination with developer design report.
- Well-versed in SQL, PLSQL, Azure SQL, MS SQL and PostgreSQL adept at extracting and analyzing data, from databases using function, Joins, unions, views clauses, aggregate function, and triggers utilized for retrieving data driven reporting.
- Expertise in C#, C++, Java, and Visual Studio .NET, with strong knowledge of Python for diverse software development. showcasing expertise in multifaceted software development and Adept cutting-edge technologies and frameworks
- Utilized JavaScript, HTML, and CSS to craft engaging interfaces, ensuring responsiveness across devices. Leveraging JavaScript's interactivity alongside HTML and CSS for intuitive designs, prioritizing usability and consistency for end user.
- Experienced in conducting Application Program Interface (API) testing using tools like POSTMAN and Knowledge of Simple Object Access Protocol (SOAP), Representational State Transfer (REST), to the specified JSON or XML format and review documentation using Swagger. Knowledge of performing CRUD operation (Create,Read,Update,Delete) and PATCH
- Expertise in implementing API security measures by utilizing OAuth, JSON web token (JWT), and API keys. Integrated cutting-edge API security solutions like API gateways and firewalls for data protection and ensure fortified system integrity.
- Collaborated with QA Team to design and implement Test Plans, Test Scenarios, Test cases and performed Black box Testing, System Testing, Integration Testing, functional and Regression Testing, Load/Stress Testing and Sanity Testing.
- Experienced in automation testing tools like Selenium, Appium, Cucumber, JMeter implementing performance testing and continuous integration to fortify overall quality assurance processes and timely delivery of high-quality software.
- Expertise in conducting User Acceptance Testing (UAT), actively engaging in rigorous UAT tests and systematically gathering client feedback. Leveraged a suite of advanced tools, including TestRail, Zephyr, qTest, User Testing, Crowdsourc, Mabl, Center code, Enov8, and Rainforest QA, for precise test management, client management.
- Effective in utilizing GitHub, Bitbucket, or GitLab for continuous integration, tempo, timesheet for time tracking, Jenkins and JIRA as a comprehensive issue tracking tool providing holistic approach to project development and management.

- Experienced in Bug and Defect tracking fixing by using tools like HP-ALM, HP-QC, SharePoint, JIRA, Trello, Bugzilla.
- Experienced in using Tableau, SQL Server Reporting Service (SSRS) to create interactive dashboards and reports like heat maps, bar graphs, pie charts, area charts Key performance indicator chart (KPI) crystal reports and pivot tables to derive business insights from OLAP cube and used Tableau connectors,PowerBI,Qlik to embed insights to dashboards.
- Extensive knowledge of continuous integration and continuous deployment with Jenkins and development techniques like Test Driven Development (TDD), Behavioral Driven Development (BDD) and Acceptance Test Driven Development (ATDD).

Datavant - San Francisco, CA

January 2022 to Present

Medication Safety Data Analytics for health insurance provider

The project aims to revolutionize healthcare data management, leveraging advanced analytics to optimize patient safety. By addressing data fragmentation through robust aggregation and cleansing, it ensures impeccable data integrity. This initiative empowers healthcare providers with data-driven decision-making, elevating industry standards and cultivating a culture centered around data excellence, but also marks the pivotal shift towards a more resilient and patient-centric healthcare ecosystem

Roles and Responsibility

- Guided the formulation of strategic initiatives for healthcare data management, applying extensive domain knowledge in Electronic Health Record (EHR), pharmacy management, and claim records to ensure the accuracy, reliability, and compliance of healthcare data, with a particular focus on adhering to the regulatory compliances like HIPAA, HITECH
- Conducted in-depth analysis of healthcare data to identify and analyze patterns and trends of Medication safety analysis.
- Conducted stakeholder workshops to elicit detailed requirements for the medication safety analytics system. Utilized tools such as Microsoft Teams and Miro for virtual collaboration and brainstorming sessions, ensure efficient elicitation process
- Applied elicitation techniques, including interviews and surveys, to gather requirements and convert them into Business Requirement Documents (BRD), while also aiding in the creation of Functional Requirement Documents (FRD) and System Requirement Specifications (SRS) in JIRA to ensure comprehensive tracking and management.
- Engaged with solution architects to establish scalable system architecture, employing tools like Lucid chart and Figma for wireframe and mockup of the system architecture and illustrating user interfaces for front end design and functionality.
- Maintained healthy product backlog, sprint backlog, and facilitated Scrum ceremonies with team and established the Definition of Ready (DoR) and Definition of Done (DoD) criteria for enhancing transparency of the entire team.
- Experienced in breaking down epics, prioritizing features, user stories using techniques like MoSCoW, KANO and estimating effort with methods using estimation techniques such as Planning Poker, T- Shirt Sizing for optimal process.

- Collaborated with team to secure patient record data quality under compliances and integration of diverse healthcare data sources such as (Electronic Health Records (EHR) Pharmacy Records and Claim Records), eliminating data silos.
- Conducted in-depth online Analytical Processing (OLAP) operation analysis of healthcare data with help of AWS Redshift.
- Guided the implementation of a sophisticated analytical framework using AWS sage maker or advanced machine learning models with data scientists to train ML models on S3 as well as redshift data and deployed ML models for predictions.
- Performed data mapping to identify sources like (flat files, text files, prescription records) required for trends for user.
- Supervised data migration efforts and Data Warehouse, ETL processes related to SQL Server Analysis Services (SSRS).
- Executed POST and GET operations on APIs, testing data retrieval from S3 bucket and verifying results in API testing with tools like Postman, and ensured transparency by documenting for Swagger, to check functionality, reliability and security.
- Demonstrated SQL queries for fetching the data from AWS Athena, for analysis which includes views, joins, select statements to maintain stored procedures for data manipulation, data validation and extraction for the health records.
- Collaborated with testing team to formulate comprehensive Test Plans, Test Case, Test Scripts, and Test data ensuring through coverage of testing specification and requirement Managed issue and defect through the bug life cycle management. Utilizing industry standard tools for streamline bug tracking and documentation in JIRA and Confluence.
- Integrated with Quality Assurance Team in leveraging a variety of testing methods including load/stress testing, white box testing, automation testing, regression testing, gorilla testing, smoke testing, sanity testing, fuzzy logic testing.
- Established and maintained a comprehensive project documentation framework, encompassing Requirements Traceability Matrix (RTM), aligning with the software testing lifecycle (STLC) and adherence to quality standards as per regulation.
- Conducted User Acceptance Testing (UAT), black box testing and beta - testing to gather client feedback of the system.
- Utilized reporting tools, AWS Quick Sight, and Tableau, preparing stakeholder reports using graphical representations covering the reports of Data Cleansing and Validation testing of Adverse Drug Events analysis, Analysis Accuracy Testing of Medication Utilization insights, security testing and data integrating testing of Patient Medication History.

Environment: Scrum fall, AWS Faregate, S3 bucket, AWS Kinesis, AWS Lambda AWS Redshift, AWS Athena, AWS sage maker AWS Quick Sight, Power BI Reporting, Jira, Confluence, MS PowerPoint, Python, Postman, Swagger, Microsoft Office, SQL SSRS.

September 2019 to August 2021

Azure Care: Migrating Epic EHR to Microsoft Azure for Advanced Healthcare Innovation and Services"

The project aimed to develop a comprehensive patient engagement platform in an agile project management methodology. The objective was to create a user-friendly digital ecosystem that would empower patients to actively participate in their healthcare journey, leading to improved patient satisfaction and health outcomes.

Roles and Responsibility

- Conducted in-depth stakeholder analysis interviews and surveys to elicit intricate business needs into functional and non functional requirements for the migration for effective project execution from EPIC EHR to Microsoft Azure platform.
- Conducted data analysis to identify and prioritized critical data and information, ensuring data accuracy and translated business requirements into technical solutions, with the development team align with project optimizing overall project.
- Developed a BRD for data migration requirements such as the use cases for the Azure data warehouse ensuring compliance with industry regulations, data security standards, and privacy requirements, including HIPAA, HITECH, GDPR.
- Conducted extensive data analysis identifying critical data elements, prioritizing them for migration to create Unified Modeling Language (UML) diagrams to represent data entities, relationships, process flows in migration process
- Utilized tools like Microsoft Visio for comprehensive process flow diagram and leveraged Azure DevOps and Azure Boards for requirement traceability and project, maintained requirements Management Plan to effective documentation
- Implemented Scrum methodology with regular ceremonies (Daily Stand-ups, Sprint Planning, Sprint Review, and Sprint Retrospective), defined Definition of Ready (DoR) and Definition of Done (DoD) criteria to ensure quality and completeness using MoSCoW prioritization and Planning Poker estimation technique for effective project planning.
- Worked with the technical team to design and implement a cloud-based data warehouse solution that would develop and implement a data governance framework for Azure data warehouse transition from Epic EHR, in structured environment.
- Worked with the technical team to develop a data model and migration plan that used Azure services such as Azure Data Factory, Azure Synapse Analytics, and Azure Storage, Azure Log Analytics, Azure Purview, for optimization of data results.
- Created a data mapping document that maps the data from the source systems to the Azure data warehouse.
- Collaborated with team to develop detailed test cases and scenarios, ensuring thorough validation of the EHR system's functionality and data integrity and conducting API testing (GET, POST, PUT, Delete) using tools like Postman, verifying data fetched from Azure Storage, and ensuring seamless integration with Azure services to verify with the EHR system
- Conducted post-implementation support, addressing issues through SQL queries on Azure SQL Database and maintaining stored procedures for data manipulation and extraction such as joins, union, aggregator, triggers for managing the data
- Collaborated closely with the quality assurance team to design comprehensive test scenarios, ensuring data integrity throughout the testing process a robust validation framework for Azure data warehouse migration system functionality.
- Conducted User Acceptance Testing, training end-users and ensuring a smooth testing phase. Employed project management tools like JIRA and Confluence to track both project and team progress, for efficient communication.
- Expertise in organizing and facilitating training sessions for end-users, ensuring proficiency in navigating and utilizing the new Azure-based EHR system with the technical team to oversee data migration efforts, optimal utilization of system.
- Defined Key Performance Indicators (KPIs) related to EHR accessibility, data security, system uptime, and innovation deployment, utilizing tools like Azure Monitor and Azure purview for data visualization optimizing efficiency and security.

- Leveraged in the successful migration of the Epic EHR system to Microsoft Azure, covering reports like migration assessment report, cost-estimation report, User Training and Adoption Report, Azure Readiness Assessment Report.

Environment: SCRUM, MS PowerPoint, Microsoft Office 365. Azure Data Factory, Azure Databricks, Azure Monitor, Azure Log Analytics, Azure Purview Jira, Confluence, SQL server, MS Teams, MS Outlook, Python, Microsoft office

Sleepwell Care - Melbourne, FL

April 2018 to September 2019

Revolutionizing Sleep Therapy Management with Myair

The project is to develop and deploy a comprehensive sleep therapy management solution, 'Myair', that optimizes patient engagement and healthcare provider monitoring. This initiative includes the implementation of a serverless architecture on AWS to enable real-time data interaction, global accessibility, and enhanced security. The project focuses on improving patient adherence, remote care efficiency, and the overall quality of healthcare services.

Roles and Responsibility

- Collaborated with stakeholders, including end customers, to understand their unique needs and requirements for 'Myair'. Interviews, surveys, and engaged with patients and healthcare providers to gather insights and perspective of end user.
- Identified potential risks, constraints, and assumptions associated with regulatory compliance, including HIPAA and GDPR. Which 'Myair' adhered to international data protection standards and healthcare regulations. uphold highest standards
- Elicited and validated user requirements by conducting interviews, JAD Session, patients and healthcare providers analyze data flows and processes to understand the AS-IS, TO- BE process of sleep therapy management analyzing sleep pattern
- Developed a comprehensive BRD encapsulating business goals, user requirements, and functional specifications and collaborated with project manager to create project plan and schedule timely achievement of milestone of project.
- Developed UML diagrams (use cases, activity, sequence) and process flow models for 'Myair' using Lucid chart and Figma to illustrate platform functionality and interactions for the stake holders and customer to understand about Myair platform
- Collaborated with the development team to align technical requirements with 'Myair' business needs. And translated business requirements into precise technical specifications in coordination with the team business and technical needs
- Maintained healthy product backlog, sprint backlog, and attended SCRUM ceremonies with team and created Definition of Ready (DOR) and Definition of Done (DOD) using INVEST and SMART technique collaborating with product owner
- Experienced in breaking down complex project requirements, prioritizing features using techniques like MoSCoW and Kano, and estimating effort with methods such as Planning Poker and T-Shirt Sizing for optimal development process.
- Facilitated SAFe ceremonies including ART (Agile Release Train) events like PI Planning, Daily Stand-ups, Iteration Planning, System Demo, and Iteration Review sessions to ensure effective collaboration, and aligning business objectives.
- Facilitated collaborative backlog refinement sessions to identify dependencies, risks, and enablers for user stories across multiple Agile teams. Aligned stories with Product Management's roadmap priorities,

utilizing tools like Miro and dependency boards to visualize intricate relationships between epics and support elements across various teams.

- Conducted in-depth online Analytical Processing (OLAP) operation analysis of sleep management data with AWS Redshift.
 - Leveraged AWS services (Amazon Kinesis Video Streams, AWS Lambda, Amazon SNS, Amazon DynamoDB, Amazon S3, Amazon CloudFront) for platform, data storage, Realtime insights and Process for the "MyAir" application
 - Collaborated with team to develop detailed test cases and scenarios, ensuring thorough validation of the "My Air" functionality and data integrity and conducting API testing (GET, POST, PUT, Delete) using tools like Postman.
 - Conducted post-implementation support, addressing issues through SQL queries on SQL Database and maintaining stored procedures for data manipulation and extraction such as joins, union, aggregator, triggers for managing the data
 - Collaborated closely with the quality assurance team to design comprehensive test scenarios, ensuring data integrity and participated in testing and validation of 'Myair' system components, verified that they aligned with the based on business requirements, including security and data privacy that met specified business criteria.
 - Aligned the final 'Myair' system with precision to meet business objectives, uphold stringent data security measures, and fulfill user requirements. Proactively addressed and resolved any deployment issues, ensuring a smooth transition for both patients and healthcare providers, facilitating uninterrupted access to enhanced sleep therapy management platform.
 - Conducted User Acceptance Testing, training end-users and ensuring a smooth testing phase. Employed project management tools like JIRA and Confluence to track both project and team progress, for efficient communication
 - Established and maintained a comprehensive project documentation framework, encompassing Requirements Traceability Matrix (RTM), Test Plans, Scenarios, and Test Cases, aligning with the testing lifecycle and adherence to quality standards.
 - Leveraged reporting tools, AWS Quick Sight, and Tableau, preparing stakeholder reports using graphical representations covering Executive Summary Report, User Engagement Report Adherence and Patient Outcomes Report, Remote Care Efficiency Report, Security and Compliance Report, Project Progress Report for visual insight information of dashboard.
 - Conducted a post-implementation review to assess the success of the 'Myair' for future enhancements and collaborated with the transition of project deliverables for ongoing maintenance and support teams.
- Environment: SaFe Agile, MS PowerPoint, JAVA, Microsoft Office 365. AWS AppSync, Jira, Confluence, SQL server, Amazon Kinesis Video Streams, AWS Lambda, Amazon SNS, Amazon DynamoDB, Amazon S3, Amazon CloudFront, python

Business Analyst

IQVIA - Mumbai, MAHARASHTRA, IN
March 2016 to February 2018

Clinical Data Management and IT Solutions for Regulatory Compliance in Clinical Trials

This project focuses on developing a compliant Clinical Data Management System (CDMS) for clinical trials. It includes creating a Clinical Data Warehouse, integrating CDMS with related applications, and implementing custom data extraction queries. It encompasses business requirement analysis and process modeling to enhance clinical data management efficiency.

Roles and Responsibility

- Ensured a thorough understanding of the business needs and objectives actively engaging with stakeholders which follows regulatory standards, such as GCP, 21 CFR Part 11, HIPAA, HITECH and regional guidelines.
- Liaison as a bridge between the business and technical teams, ensuring clear and effective communication with all IT solutions aligned with regulatory requirements, including Good Clinical Practices (GCP) and FDA standards. This involved a comprehensive review of system design, validation protocols, and guidelines. adherence to establish regulatory standards
- Collaborated with business stakeholders to gather, document, and analyze their requirements related to clinical data management and IT solutions involved conducting in-depth interviews, question and surveys, and stakeholder analysis
- Documented Business Requirement Documents (BRD), while also aiding in the creation of Functional Requirement Documents (FRD) and System Requirement Specifications (SRS) in JIRA to ensure comprehensive tracking management.
- Developed UML diagrams (use cases, activity, sequence) and process flow models that depicted the relationships between clinical data entities using Lucid chart and Figma to illustrate platform functionality and interactions for the stakeholders.
- Maintained healthy product backlog, sprint backlog, and attended SCRUM ceremonies with team and created Definition of Ready (DOR) and Definition of Done (DOD) using INVEST and SMART technique collaborating with product owner
- Experienced in breaking down complex project requirements, prioritizing features using techniques like MoSCoW and Kano, and estimating effort with methods such as Planning Poker and T-Shirt Sizing for optimal development process.
- Oversaw the integration of the Clinical Data Management System (CDMS) with related applications, ensuring seamless data flow and interoperability between systems. This integration facilitated real-time access data.
- Worked closely with data architects to define a robust data management strategy, emphasizing data quality, security, and traceability and leveraged tools like Erwin Data Modeler for data modeling and schema design.
- Evaluated and recommended tools for CDMS development, considering factors like scalability, interoperability, and compliance. Integrated the CDMS with EDC systems using tools like Apache NiFi for data ingestion
- Executed POST and GET operations on APIs, testing data retrieval from S3 bucket and verifying results in API testing with tools like Postman, and ensured transparency by documenting for Swagger, to check functionality, reliability and security.
- Collaborated closely with the IT team to define and validate custom SQL queries (Joins, Union, Aggregators) for data extraction and validation. These queries were instrumental in extracting, transforming, and loading clinical data.
- Collaborated with the development team for comprehensive test cases and participated in quality assurance to validate system functionality and compliance of test scripts, test execution, defect tracking, and regression testing.
- Worked collaboratively with quality assurance teams to ensure that the system met the defined requirements.
- Provided support to the project manager by contributing to project planning, tracking, and reporting. and delivered a compliant CDMS that met regulatory standards, improved data management efficiency, and provided a user-friendly experience for stakeholders involved in clinical trials fulfillment of regulatory requirements in the clinical trial environment.
- Leveraged reporting tools, AWS Quick Sight, and Tableau, preparing stakeholder reports using graphical representations covering Data Quality Reports, Subject Recruitment and Enrollment Reports, Data

Monitoring Committee (DMC) Report, Security and Clinical Trial Progress Report, Compliance Report for visual insight information of dashboard.

Environment: Agile/Scrum, BI Analytics, CX Analytics, BI Reporting, Jira, Confluence, MS PowerPoint, Microsoft Office 365. Apache NiFi, EDC systems, Erwin Data Modeler C# language.

Practo - Bangalore, KARNATAKA, IN

July 2015 to March 2016

Patient-Centric Technology Integration Project Putting Patients at the Heart of Medical Advancements

This project focuses on the design and implementation of advanced technology solutions for the digitization of key medical and commercial functions. It includes mapping business processes, ensuring compliance, facilitating data migration, and optimizing system configuration to enhance operational efficiency, data security, and patient care. The project spans multiple regions, fostering cross-functional collaboration and aligning with industry regulations and standards.

Roles and Responsibility

- Ensured airtight adherence to rigorous regulatory standards, including HIPAA, GDPR, and GxP. Collaborate with data privacy and compliance teams to implement ironclad data security and unwavering regulatory compliance.
- Proactively engaged with diverse stakeholders to facilitate in-depth interviews, workshops, and surveys, meticulously identifying and documenting complex business needs, objectives, and various constraints to understand business needs.
- Documented Business Requirement Documents (BRD), while also aiding in the creation of Functional Requirement Documents (FRD) and System Requirement Specifications (SRS) in JIRA to ensure comprehensive tracking management.
- Developed UML diagrams (use cases, activity, sequence) and process flow models that depicted the relationships between data entities using MS Visio and Balsamic to illustrate platform functionality and interactions from stakeholders.
- Expertise role during the deployment phase, expertly leading data migration efforts, particularly during critical transitions between vendors or platforms. Ensure data integrity remains and oversee the seamless transfer of data to the new system
- Contributed to all phases of the software testing lifecycle, ensuring adherence to quality standards and best practices.
- In the project closure phase, compile comprehensive project documentation, including user-friendly and up-to-date user manuals and process guides and facilitated knowledge transfer sessions to ensure that stakeholders have a profound understanding of the new systems and processes. for ongoing system utilization and maintenance
- Facilitated the SDLC project's lifecycle, maintain an unwavering commitment to open and transparent communication with business stakeholders and addressed their concerns with empathy, gathered their feedback, and orchestrated effective discussions and workshops that yielded consensus. fostering a positive working relationship.

Environment: Agile/Scrum, BI Analytics, CX Analytics, BI Reporting, Jira, Confluence, MS PowerPoint, Microsoft Office 365, JAVA

Cab Aggregation Platform Management

The main objective was to establish a profitable multi-city cab aggregation platform, optimizing customer experience and reducing operational costs through efficient feedback mechanisms. Proven expertise in streamlined project management, stakeholder collaboration, and continuous improvement, resulting in increased user satisfaction and business value.

Roles and Responsibility

- Collaborated with 500+ cab operators/aggregators to conduct interviews, user research to identify pain points for servicing users and working with technology partners to ideate features that reduced call resolution time by 25%
- Assisted in gathering requirements from stakeholders for driving functional requirements specification in FRD
- Worked with the core customer-facing portal- mapped user journeys, interacted with end-customers, to enhance the onboarding process, and ideated product features that drive customer adoption and business value
- Defined the product scope across multiple releases, developed roadmaps, drew up value scales based on multiple metrics and accepted enhancements/features from the software engineering team
- Tracked project progress and incidents/tickets on JIRA and ServiceNow using different metrics such as Sprint Burn Up charts, Kanban boards, Backlog resolution and issue/defect management needs

Education

Bachelor of Technology in Mechanical Engineering

APJ Abdul Kalam Technical University - Kalam, Maharashtra
