Professional Summary:

Experienced SaaS Technical Business Analyst/ Software Implementation Lead with 8+ years of experience in analyzing and improving business processes for SaaS companies. Strong knowledge of SAAS platforms and technologies, with a proven track record of working with cross-functional teams to achieve business goals. Excellent communication and project management skills. I have good knowledge of Business Requirement Documents (BRD), Functional Specification Documents (FSD), System design (SDD), and Requirements Traceability Matrix. I have Expertise in requirements management, data analysis, data visualization dashboards and reports, and supporting QA project activities.

SKILLS

Business Tools & Database: ServiceNow ITIL, SAP SuccessFactors LMS, GeoTalent LMS, QlikSense, SharePoint, MS Outlook, MS Excel, MS Access, MS Visio, Miro, LucidChart, Smartsheets, Confluence, ZenDesk, Tableau, MySQL, Oracle 11g, Microsoft SQL Server, Adobe Presenter, SAP Ariba ERP, SOX, ITGC, Extranet , [monday.com](#), Mural, Freshworks, FreshDesk, Zendesk, Salesforce integration, DataDog, Kibana

Technical/ Web development Skills: SQL, HTML5, CSS3, REST, SOAP, HTTP, HTTPS, JavaScript, Configuration, API / Batch Integration, SAML (SSO), QA, JIRA, UML, TFS, ERP Integration, Power BI (ODATA), SAP ERP, Karate Framework, Kafka, NLU, NLP, Splunk, Jenkins

- Effectively brainstormed the ideas with the Subject Matter Experts for identifying requirements and communicate those with the team in a distributed work environment.
- Managed the finance master data change management process, including reviewing new requests, obtaining stakeholder alignment, actioning ERP changes, and partnering with downstream process owners to ensure efficient workflows.
- Led the implementation and configuration of Zendesk, a customer support ticketing system, to improve service operations and streamline customer inquiries.
- Collaborated closely with cross-functional teams, including customer support, IT, and management, to gather requirements, assess business needs, and define project objectives.
- Conducted comprehensive data analysis to identify critical data sources and dependencies for migration to Zendesk.
- Developed and executed a data migration strategy, ensuring the seamless transfer of customer records, service history, and support tickets from legacy systems to Zendesk.
- Expertise in creating various project documents like BRD, FRD, Data mapping, data definition document, Data migration, API Data integration using tools like Postman, Swagger, SoapUI, related documents, Test Plan, Test case, UAT Document etc.
- Integrated conversational AI solutions with telephony systems and external APIs, enabling efficient communication and data exchange.

- Implemented secure Web Services (RESTful) for real-time data exchange between internal and external systems, enhancing data accuracy and reducing manual intervention.
- Designed and implemented SSO protocols, including SAML and OAuth, to ensure seamless authentication and authorization across applications.
- Proficient in elaborating & consolidating the business requirements into Epics, Features, User Stories, Acceptance Criteria and User Story Mapping and maintaining them in JIRA, Rally and Azure boards
- Experience in Conducting Sprint Planning, Sprint Retrospective, Backlog Refinements and Daily standups as part of Agile ceremonies
- Experience in using JIRA, Rally, Azure board, Team Foundation Server (TFS), HP Agile General Manager (AGM) and other Agile-Scrum reporting tools.
- Utilized Datadog to monitor and analyze system performance, identifying and resolving performance bottlenecks, resulting in a 25% improvement in application response times.
- Leveraged Splunk to analyze logs and proactively detect anomalies, reducing incident response time by 30% and ensuring system uptime.
- Proficient in API testing and validation, using tools such as Postman, to ensure the accuracy and reliability of data exchanges between systems.
- Leveraged Swagger for API documentation, creating comprehensive and user-friendly API specifications for development and integration teams.
- Conducted in-depth analysis of Datadog and Splunk data to provide actionable insights for capacity planning, resulting in a 15% reduction in infrastructure costs.
- Led training sessions for team members on utilizing Datadog and Splunk effectively, enhancing the overall data analysis capabilities within the organization.
- Knowledge in creating various UML diagram like Use case diagram, Activity Diagram, Entity Relationship diagram and Sequence Diagram.
- Proficient in preparing Business Requirement Document (BRD), Software Requirement Specification (SRS), System Design Specification (SDS) and Functional Specifications
- Experience with supporting enterprise level projects in Waterfall and various Agile methodologies
- Experience in creating/conducting brainstorming sessions, workshops, Joint Application Development (JAD) sessions, White Board Sessions with end-users
- Exceptional documentation skills for writing business requirements (BRDs), Business rule document, Systems Requirement specifications (SRSs), Functional specification and defining project scope.
- Coordinate all the project related activities, implementing action plan to meet agreed standards and deadlines, ensuring the effective preparation delivery of all project events meetings.
- Collaborated closely with stakeholders, including developers, QA teams, and project managers, to facilitate clear communication and alignment on technical requirements.
- Utilized Postman collections for automated API testing, improving testing efficiency and reducing the turnaround time for identifying and resolving issues.
- Facilitated daily stand-up meetings, sprint planning, and sprint reviews within an Agile environment.
- Developed detailed user stories and acceptance criteria, ensuring clear communication between development and business teams.

PROFESSIONAL EXPERIENCE

Aisera Palo Alto, California

Oct '22 - present

AI Solutions/ Software Implementation Engineer

- Lead the end-to-end implementation of the functional work streams (such as Procure to Pay, Sourcing to Contracts, Supplier Relationship Management, etc.), from the start to production delivery.
- Oversaw the data mapping process, identifying data transformation requirements and validating data accuracy during migration.
- Implemented automated data migration scripts and procedures, reducing manual data entry by 30% and minimizing data errors.
- Conducted user training sessions for customer support teams to facilitate a smooth transition to Zendesk, resulting in a 25% increase in agent productivity within the first quarter.
- Successfully led the end-to-end implementation of Aisera's AI-powered IT Service Management (ITSM) platform for a global enterprise client, streamlining IT support processes and enhancing user experience.
- Documented SSO implementation processes, guidelines, and troubleshooting procedures for IT support teams.
- Collaborated closely with cross-functional teams, including IT, operations, and customer support, to gather requirements, design customized workflows, and integrate Aisera's Conversational AI solution within the existing infrastructure.
- Conducted comprehensive user training sessions, empowering over 500 employees to effectively leverage Aisera's self-service capabilities, resulting in a significant reduction in support ticket volumes.
- Acted as the primary point of contact for technical queries, troubleshooting, and post-implementation support, maintaining a 98% customer satisfaction rating throughout the project lifecycle.
- Collaborated closely with multidisciplinary teams, including developers, quality assurance testers, and project managers, to gather, document, and translate business requirements into precise REST API specifications.
- Experienced in creating, managing, and executing comprehensive Postman collections, allowing for efficient and systematic API testing, including endpoint verification, status code validation, and response data analysis.
- Collaborated with the Aisera development team to identify and communicate client feedback, contributing to the enhancement of product features and usability.
- Validate XML files using XML Notepad to ensure data type and data formats aligns with the XSD Schema validation rules
- Debug any issues encountered in the XML files to find out the cause of errors and work with corresponding teams to resolve the issues

Skills & Tools - SQL, Extranet, Excel, Jira, MS SQL Server, API, Zendesk, SFTP, REST, Postman, Procurement SAAS, JSON, ServiceNow, KACE, FreshDesk, Datadog, Kibana, Web Technologies, Confluence, NLU, NLP, Azure board, MS Office Tools

Software Implementation Engineer

- Install, configure, and integrate FM:Systems software solutions to best meet each customer's business objectives
- Trained end-users on the new SSO process, reducing password-related helpdesk requests by 40% within the first quarter.
- Continuously monitored Zendesk performance, identified areas for improvement, and implemented enhancements to optimize the customer support workflow.
- Set up client specific homepages and headers
- Utilized Postman's features for automated testing, improving testing efficiency, and expediting the identification and resolution of API-related issues.
- Elicit business requirements and business needs into user stories and acceptance criteria performed story mapping as part of an Agile Scrum team and manage it by using the Team Foundation Server (TFS).
- Conducted comprehensive testing and validation of Web Services using SOAP UI, ensuring accurate data exchange and compatibility across different platforms.
- Collaborated with development teams to troubleshoot and resolve integration issues, resulting in a seamless end-user experience.
- Develop customer-specific web pages, reports, and dashboards
- Integrate with customer data sources and other customer systems via API's and other published interfaces
- Support the proper database design and set up for our clients, keeping data normalization top of mind
- Worked with stakeholders to further elicit requirements using interviews, document analysis, requirement workshops, surveys, site visits, business process descriptions, use cases, and workflow analysis on various web and application projects
- Responsible for conducting clients interviews and get clients requirements on complex federal, State and local policy, and regulations to determine category of eligibility in accordance with federal, State and local laws
- Responsible for guiding the developers in implementing new features in the software
- Identifying and documenting the design, development and/or implementation of non-functional requirements of built
- and/or purchased information systems
- Responsible for analyzing the interactions among multiple applications.
- Presenting automation needs and requirements to facilitate the building and/or implementation of automated solutions.
- Developed proactive monitoring alerts in Datadog to detect anomalies and performance issues, reducing downtime by 25% and ensuring high availability.
- Collaborated with development teams to analyze Datadog data and optimize application responsiveness, contributing to a 20% increase in user engagement.
- Conducted regular performance analysis using Datadog to identify infrastructure bottlenecks and recommend targeted optimizations, leading to a 15% decrease in operational costs.

Key Skills & Tools - SQL, [Monday.com](#), Excel, Zendesk, MS SQL Server, Windows Server, API, REST, Postman, SSIS, SSRS, Jira, Splunk, Confluence, Azure board, MS Office Tools, SFTP, Swagger

Kforce Inc., Tampa, Florida

June '21 - Sep '21

Senior Business Analyst at Fidelity Investments (end client)

- Crafting web-based transaction applications in Agile/SCRUM methodology including requirements, user stories and project tracking using JIRA
- Contribute to improving systems analysis/ product owner practices across a distributed team
- Designed and customized Datadog dashboards to visualize key performance indicators, enabling cross-functional teams to make informed decisions.
- Collaborate with the technology and business teams to deliver high quality solutions for business problems
- Skilled in using Swagger to document RESTful APIs, generating clear and detailed API specifications to enhance communication and collaboration across cross-functional teams.
- Worked in web software development projects with variety of team members that included software developers, project managers, and business analyst. Gathered requirements for these projects.
- Created use cases, flow charts, OO model, UML diagrams, process flows, task analysis, database diagrams, wire frames and screen mock-ups.
- Analyzed and created client surveys, interview information, user experience feedback and user business needs.
- Prioritized and managed the product backlog, optimizing feature delivery based on business value.
- Collaborated closely with the development team to ensure on-time, high-quality releases.
- Led user acceptance testing efforts, ensuring product readiness and customer satisfaction.
- Experienced with Scrum and Agile development methodologies.
- Cooperated with customers, stakeholders, and other team members in order to manage my own projects, created schedules, met expectation, managed risks, and deliver projects on time.
- Flexible with a variety of software development methodologies, including Agile, National, UML, and (Capability Maturity Model Integration).
- Experienced using business analyst tools for requirements gathering including Mercury QualityCenter, and Compuware's (Business Requirement Module)
- Coordinated and performed software testing: developed QA test cases, created test scripts, release notes, and verified user requirements
- Knowledgeable and experienced with content management tools, HTML and XML.
- Implemented a wiki collaboration tool to facilitate the transfer of knowledge and management of standards for business analysts, project managers, technical writers and software developers.

Key Skills & Tools - SQL, Confluence, Jira, Excel, MS SQL Server, API, REST, Postman, Zendesk, SFTP, Mural, Jenkins, JSON, DataDog

Apex Analytix LLC., Greensboro, North Carolina

Dec '19 – May '21

Implementation Specialist II

- Design and develop workflows for the functionalities in apex portal and present it to key stakeholders
- Collaborated with stakeholders to define KPIs and implemented custom Zendesk reports and dashboards to track and analyze customer support performance metrics.
- Achieved seamless SSO experience across 10+ applications, reducing login times and improving productivity.

- Design and develop the User Interface using HTML, CSS, JavaScript as per the proposed wireframes
- Configured Secure File Transfer Protocol (SFTP) connections for automated data transfers, ensuring data integrity and compliance with industry standards.
- Develop apexportal Solutions specific to the client's requirements using SQL Server Management Studio and C# code and work with clients like JetBlue, CEMEX, WeWork and WarnerBros
- Develop, Implement and enhance high impact business process improvement projects
- Assist clients in designing and developing interfaces between their ERP systems & apexportal
- Lead the testing of ERP integrations including reconciling data between client's ERP systems & apexportal
- Implemented strong data encryption using industry-standard algorithms (e.g., AES) to safeguard sensitive patient information during transmission and storage.
- Designed multi-factor authentication (MFA) processes to ensure secure access to critical systems, enhancing data protection and regulatory compliance
- Develop Test Strategy, Test Plan and Test Summary Report which included recommendations
- Exposure in the end-to-end testing of software products from requirement analysis to UAT
- Designed and implemented Splunk dashboards to visualize critical performance metrics, enabling data-driven decision-making by cross-functional teams.
- Developed and maintained Splunk alerts and reports to proactively identify anomalies and mitigate system issues, reducing downtime by 30% and ensuring high availability.
- Troubleshoot network, database, and software problems for our client implementations
- Client engagement for business analysis and requirement gathering during fit gap analysis phase
- Interact and coordinate with stakeholders during conceptualization and development of the application
- Manage setup of technical environment for hosted clients Communicate/coordinate with ClientValue Team as well as Audit team to support clients
- Involve in other in-house Research & Development project such as Live TIN matching, Smart VM, Rules Engine project
- Gathering the requirements from the business owners and SOA services team
- Translating the requirements to Technical and business documentation
- Utilized TFS for writing the requirements, test cases and maintaining the traceability
- Created process flow diagrams using Microsoft Visio.

Key Skills & Tools - SQL, Monday.com, Excel, MS SQL Server, Windows Server, API, REST, Postman, SSIS, SSRS, Jira, SFTP, Zendesk, Swagger, SOAP UI

ITboons LLC, Fremont, California

Sep '17 - Dec '19

Business Systems Analyst at Lam Research Corporation

- Develop quarterly curriculum progress report and manage Qlik dashboards
- Develop ad-hoc quick reports using SQL in LMS back-end
- Build and manage SQL queries in LMS for auto enrolling the engineers into the group
- Implement and monitor business metrics to evaluate the program success
- Work with IT group and develop technical solutions to improve business efficiency
- Received IT tickets via heat software, determined if the issue was a current product defect or amaintenance request of past releases, escalated as needed.

- Assessed customers' current capabilities and needs to identify potential cots (commercial off theshelf) products as solutions.
- Worked with technical teams to determine and justify a solution approach that maximizes customer value through improvements to workflow, production, efficiency and/or effectiveness
- Provided technical and non-technical assistance to the PMO (Project Management) to develop project documentation
- Worked with the technical development team to ensure that requirements are effectively implemented
- Worked with project/business stakeholders and/or users to facilitate user acceptance testing.
- Collaborated closely with development teams to analyze Splunk data and optimize application responsiveness, contributing to a 20% increase in user satisfaction.
- Conducted regular performance analysis using Splunk, identifying areas for resource allocation optimization, and achieving a 15% reduction in operational costs.
- Worked with customer contacts after solution delivery to understand ongoing needs and issues along with associated business drivers, and assist in triaging within OIT (Office of Technology) to engage resources to provide the appropriate response/resolution
- Lead the development team through the working phase of the project by researching and answering questions about the defined work, identified bugs and assisting in technical roadblocks
- Created and maintained the testing plan for the project following an iterative development methodology
- Provided knowledge transfer for all systems and processes, trained others including technical and functional staff and end-users
- Maintained documentation libraries, templates and ensured the appropriate access and use of documentation materials.

Key Skills & Tools - SQL, MS SharePoint, QlikSense, Zendesk, LMS, MS SQL Server, MS Outlook, MS Teams, SFTP, SOAP UI

Fidelity Investments

June '16 - Aug '17

Business Analyst Co-op

- Prepared User Requirements Document (URD), Business Requirements Document (BRD) and Functional Requirements Document (FRD)
- Involved in documenting the UAT test plan and executing test cases with Users to ensure user acceptance
- Data mapping, logical data modeling, created class diagrams and ER diagrams and used SQL queries to filter data within the Oracle database
- Worked on Commercial lines Property and Casualty Insurance including both policy and claim processing and reinsurance
- Created efficiencies in workflow process, document procedures, ad-hoc accounting assignments.
- Analyze and design business processes, define and implement process workflows and functional requirements
- Define business scope and primary objectives of new projects. Identify, validate and document business requirements

- Provide Information Owners evergreen solutions for data management in adherence with the Records
- Worked with various teams on setting new JIRA, CONFLUENCE instances for new teams
- Participated in the testing front end of the application and filling UAT defect log and maintaining project's issue and action item
- Detailed project planning including schedules, technical and business requirements, cost and resources plan

Key Skills & Tools - SQL, MS SharePoint, API, REST, Postman, SSIS, SSRS, Jira, Excel, MS SQL Server, Windows Server

PROJECTS

Implementation of Engineering Learning and Development Training Curricula

- Develop test scripts, use cases, user stories for business processes
- Develop business workflows, scripts to automate current processes (email merge, reminders)
- Create and publish courses like ILT's, WBT's, skills, programs in Learning Management System
- Implement Certification programs/ courses CIP as defined parts of requirements
- Manage and provide end user support on the LMS for course/ programs on-going basis
- Manage the skill certifiers list on SharePoint website
- Developed Test Strategy, Test Plan and Test Summary Report
- Exposure in the end-to-end testing of software products from requirement analysis to UAT

Key Skills & Tools - SQL, MS SharePoint, API, REST, Postman, SSIS, SSRS, Jira, Excel, MS SQL Server, Windows Server

Automation of Survey reminders in SQL database

- Develop SQL data model and implement in LMS for automated email notification to complete the survey for class enrollees and to complete the training programs

QlikSense Dashboards for Engineering Learning and Development Training Curricula

- Develop customized and interactive dashboards in QlikSense for student's programs, courses, skills, organizations showing the progress of engineers and 'time to certify' for each program
- QA testing of QlikSense dashboards and validate with LMS database
- Manage and develop quarterly reports for cross functional stakeholders to make business decisions

EDUCATION

Master of Computer and Information Science - Business Analytics

Aug '15 – May '17

Cleveland State University, Ohio

Bachelor of Engineering in Information Science (B.E.)

Aug '10 - Jun '14

Visvesvaraya Technological University - Karnataka - India
