

SRUJAN REDDY

Sr. Business Systems Analyst

Professional Summary:

- Independent and **goal-oriented professional** with **cross-functional problem-solving** and **technical expertise**. Proficient in **optimizing business process flows** to drive operational efficiency. Specializes in the dynamic **Property & Casualty Insurance** domain. skilled at effectively bridging the gap between business users and **technology, ensuring seamless communication**.
- 8 years of extensive experience as a **Business Analyst** in the Information Technology industry. Adept in workflows of insurance industry including **Property & Casualty Insurance**. Competent in **Policy Administration, Claims, Bind and Quote** operations.
- Knowledge on various insurance regulating compliances which include **National Association of Insurance Commissioners (NAIC), Financial Industry Regulatory Authority (FINRA), National Insurance Producer Registry (NIPR), Association for Cooperative Operations Research and Development (ACORD)** and **National Council on Compensation Insurance (NCCI)**.
- Experience and working knowledge on **Guidewire Insurance Suite Claim Center**, with a focus on **claims and adjudication**.
- In-depth knowledge and involvement in **Software Development Lifecycle** process which includes **Waterfall, Scrum, Scrum-Waterfall Hybrid, and Scaled Agile Framework (SAFe)**, with experience in applying these methodologies to real-world projects.
- Experienced in conducting comprehensive **Feasibility studies, meticulous Risk Analysis, Cost-Benefit Analysis**, insightful Impact Analysis, and thorough **GAP Analysis** to analyze the needs of a project. Performed GAP Analysis to gain a deep understanding of the **AS-IS** and **TO-BE** of the processes, thereby facilitating **effective decision-making**, and **successful project implementation**.
- Facilitated requirements elicitation by utilizing different techniques, including **Interviews, Brainstorming, Focus Groups, Document Analysis, Requirement Workshops, Observations, Prototyping, Joint Application Development (JAD) Sessions**, and Agile ceremonies such as **Backlog Refinement and Sprint Planning**, to gather requirements from end users and stakeholders.
- Involved in development of thorough documentation for capturing business and technical details like **Business Requirements Document (BRD), Functional Requirements Document (FRD), System Requirements Specification (SRS), Requirements Traceability Matrix (RTM)** and assisted the Project Manager in creation of the **Project Charter, Project Management Plan (PMP), Work Breakdown Structure (WBS), and Change Control Management, Defect Management, and Project Management**.
- Created **UML Diagrams** including **Use Cases, Activity Diagrams, Sequence Diagrams, Data Flow Diagrams** and ERDs using **Magic Draw and MS-Visio** thus defining the **Business Process Model** and preparing **complex functional requirements document**.
- Collaborated with designers and created visual representations such as **mockups, wireframes, and prototypes** using **Balsamiq**.
- Experienced in breaking down **Epics** into **User stories** using Slicing techniques that satisfy the criteria of 3Cs, **INVEST**, and help in **Prioritization** and **Estimation techniques** like **MoSCoW, KANO, Value stream mapping, Planning Poker, T-shirt sizing** etc.,
- Created **Conceptual and Logical data models** by using **data modeler** and assisted in the creation of **physical data models**.
- Extensive knowledge of **Data Warehouse** implementation including **Dimensional Modelling (Star & Snowflake Schema), Data marts, ETL tools like Informatica for filter, router, joiner, aggregator, and expression transformations** for data modification and management services, with experience in leading and mentoring teams in a collaborative and agile environment.
- Knowledgeable in **OLAP analysis (MOLAP and HOLAP)** and operations like **Roll up, drill down, slicing, dicing and pivot**.
- Involved actively in **Data Mapping process** by analyzing the attributes and the types of the attributes and identified the **mapping rules** to be applied for the **data migration process** along with the data analysts. Knowledge of **Data Migration and data mapping** to carry out **data profiling and data integration**, ensuring that the data was accurately and efficiently migrated.
- Cultivated extensive expertise in working with **diverse web service technologies**, including **WSDL, SOAP, REST, and JSON**, operating within **complex architectural frameworks** such as **Three-tier architecture, Service-Oriented Architecture (SOA), and Microservices**. Demonstrated proficiency in seamlessly integrating these services and facilitating efficient communication between different system components, resulting in **enhanced interoperability, scalability, and overall system performance**.
- Assisted in **API testing** to check their **reliability, functionality, and security** by using **Postman and SOAP UI** tools. Even involved **API documentation** by making use of the **Swagger** tool, ensuring that all **APIs were well-tested and documented**.
- Performed retrieval and validation of data by using **Data Definition Language (DDL), Data Manipulation Language (DML) and Data Query Language (DQL)** to perform **CRUD operations** on the database, ensuring that the data was accurate and consistent.
- Knowledge of working with query languages such as **SQL**, to performing **aggregate functions** which include **min, max, count, sum, avg** etc., **joins, unions, group by, order by and sub queries** which were useful in **extracting data** from different types of **data sources** like **MYSQL, Oracle database, MS SQL Server, and MS Access**, to provide insights and make **data-driven decisions**.
- Assisted in the creation of **Test Plans, Test Cases, Test Scenarios and Test data**, and collaborated in performing different types of testing, including **User Acceptance Testing (UAT), Functional Testing, Unit Testing, System Testing, Integration Testing, Black box and Smoke testing, and Regression testing**, to ensure that the software met all requirements and was free of **defects**.
- Knowledge of **Test-Driven Development (TDD), Acceptance Test Driven Development and Behavior Driven Development (BDD)**
- Defects tracking prioritizes outstanding defects in **reporting system**, coordinates between development team and management to resolve any **conflicts/defects** in terms of requirements, ensuring that defects are identified and resolved in a timely manner.

- Experienced in using **Tableau & Power BI** to create **interactive dashboards** and **reports like heat maps, bar graphs, pie charts,** and **pivot tables** to derive business insights from **OLAP cube** and used **Tableau connectors** to embed insights to dashboards.

Technical Skills:

Business Skills	Project Management, Requirement Elicitation, Release Management, Change Management, Risk Management, Defect Management, Impact Analysis, Risk Analysis, Cost-Benefit Analysis, ROI Analysis, JAD Sessions, SWOT analysis, Stakeholder Analysis, Market Analysis, GAP Analysis, Root Cause Analysis, Feasibility study
SDLC Methodologies	Waterfall, Hybrid (Waterfall-Scrum), Agile Scrum, SAFe
Process Modelling Tools	MS Visio, Smart Draw, Balsamiq, Lucid Charts, Draw.io
Requirements & Project Management	MS Project, JIRA, Micro Focus ALM, Confluence, SharePoint Server, MS Office
Testing Tools	Micro Focus ALM, Postman, Selenium, and Swagger
ETL Tools	Informatica PowerCenter, SSIS
Data Analysis / Reporting	Tableau, QlikView, Power BI
Databases	Microsoft SQL Server, MS Access
Data Modelling	Logical/Physical/Dimensional/E-R, Star/Snowflake Schema
Data Warehousing	Data Marts, OLTP, OLAP, Multidimensional Analysis, Data Mining, Slicing/Dicing, Drill Down/Roll Up

Professional Experience:

Erie Insurance, Erie, PA

Dec 2021 to Present

Senior Business Analyst

The project aimed to efficiently gather and **analyze data** from **IoT devices**, sensors, and **Telematics** during the generation of **First Notice of Loss (FNOL)** reports for specific incidents. **Real-time data analysis** and **claim segmentation** based on **incurred losses** and **default payments** were performed using an **unsupervised algorithm** integrated with **Guidewire Insurance Suite**. To enhance **decision-making**, **Claims Triage Analysis** was implemented, eliminating guesswork in assignment, and **ensuring timely and accurate completion** by **routing tasks** to the most suitable resources. The organization successfully adopted **Usage Based Insurance (UBI)** Methodology, complying with regulatory requirements and **corporate social responsibility (CSR)**, by **leveraging IoT devices** and **telematics** for effective data collection which resulted in Time to process a claim as been **declined by 25%** and **loss ratio evaluation** and pricing strategy assessment using **advanced analytics** contributed to a **20% increase in profitability**.

Roles and Responsibilities

- Collaborate with **stakeholders**, including **business users, IT teams**, and **SME's**, to understand project objectives and gather requirements related to **big data, machine learning, NLP**, and **streaming analytics** for **IoT data analysis** and **claims triage**.
- Conducted **workshops, interviews**, and **data analysis** to identify key **data sources**, and business rules required for generating **First Notice of Loss** reports, using **BI, regulatory compliance, data mining , security, and governance**.
- Analyze existing processes and identify areas for improvement, conducting a comprehensive **gap analysis** to ensure strict alignment with **regulatory requirements, corporate social responsibility norms, risk mitigation strategies, compliance frameworks** ,and fostering **continuous improvement**. Utilize **data-driven insights** and enhance organizational performance.
- Prepared **high and low-level object-oriented design** documents (which included Use Case Diagrams, **Data Flow Diagrams, Activity Diagrams, Data definitions, Data mapping, XML** requests and responses, and report specifications) using **Lucid**.
- Used **MS PowerPoint, MS Word & MS Visio** to document data flow of the existing process and for the upcoming process.
- Communicated effectively across company clients, teams, about the **project requirements, schedules** and **launches**.
- Developed **mockups & wireframes** for **ACORD Forms** by using **Figma**, checked the flow reports for developers to implement the functionality and got approvals of **wireframe/mockups** from the client over interviews or by virtual meetings.
- Communicate with Customers on **ACORD Forms** design and other technical and resolving issues in an efficient manner.
- Involved in Sprint that covered Elaboration, Configuration and Testing of **Guidewire Live Suite** following **AGILE approach**.
- Actively participated **Daily Stand-up Meetings, Project Planning, Sprint Planning, Sprint Review** and **Sprint Retrospective**.
- Conducted **User Story Writing** Sessions to decompose **BRD** into **User Stories** by adhering to the **INVEST** criteria and assisted Product owner in determining **Acceptance Criteria** for the user stories and to efficiently reprioritize **product backlog items**.
- Utilized **JIRA** for **issue tracking, user story management, requirement traceability, requirements management** and **allotting tasks**. Allocating **issues**, including **tasks, feature requests**, and **bugs** to team members and tracking progress.

- Involved in making **key decisions** for the selection of **AWS** components and used different functionalities like **Amazon IOT Events** and **Amazon Kinesis streams** for capturing the data from sources and processing it, **Amazon lambda** for trends in sensor data, **Amazon EC2 Redis engine** for in-memory storage and **Amazon SageMaker** for **real time analysis** of data.
- Performed and evaluated the benefits of the new system, workflows, involved in **mapping data** from different data sources.
- Executed **SQL queries** using **SELECT, having, group by, order by, inner and outer joins, aggregate functions** for **QA testing**.
- Designed & developed the **Test Plan, Test Cases and Use Case Scenarios** documents & executed it using **Micro Focus ALM**.
- Assisted with **User Acceptance Testing, developing, and maintaining quality procedures**, and ensure that appropriate documentation is in place. Assisted in **Black box testing, Regression testing, Performance testing and Systems testing**.
- Extensively involved in **UAT Testing** in **Gherkin** format phase to ensure the requirements & functionality of the system.
- Assisted **QA Team** in Testing & analyzing **APIs** using **interface analysis** to interpret **data formats** for complete understanding of **business requirements** & integration of **REST APIs** with the business rules engine using **Postman**.
- Actively Participated in **Bug-review** meetings, collaborated with software developers, **QA engineers, managers**, and suggested solutions for effective results. Engaged in Communicating with managers about the **status of bug-fixing efforts**.

Environment: Scrum – waterfall Hybrid, MS Visio, MS office, Fraud management, Risk management, Amazon Kinesis, Aws Lambda, Amazon Sagemaker, Tableau, Gherkin, Cucumber, Guidewire Live Suite (with Policy Center, Billing Center & Claim Center), JIRA, MS Office Suite (MS word, MS Excel, PowerPoint), MS Project, Postman & swagger.

Jarus Technologies Inc, Pittsburgh, PA

Sep 2019 to Aug 2021

Senior Business Analyst

Property & Casualty Modernization project which involved replacing the Legacy System for **Personal Property** and **Auto Lines** with **Guidewire Policy, Billing and Claims Centers** thereby improving the customer experience and improving the cycle time for the basic processes like **Quote & Bind, Underwriting, Issuance, Billing, Renewal and Claims**. Member of the **Corporate Data Management System (CDMS)** team, the **CDMS** system will replace the **Legacy System** by migrating client and **policy data** from Legacy to **CDMS** thus enabling all the systems in the organization to interact with only **CDMS**. Part of the **Document Management System (DMS)** team thereby capturing the requirements for documents that will be part of the Application, **Declaration and Quote stemming** in **reduced number of errors in claims process by 30%** and achieved a **20% increase in customer satisfaction ratings**.

Roles and Responsibilities:

- Responsible for capturing the requirements for **Publish/Subscribe System (PUBSUB)** responsible for enabling **real time event streaming** and **asynchronous communication/data transfer** between the systems throughout the Organization.
- As an integral part of **PUBSUB** implementation gathered the list of events that can be published by each system includes, **Agent and Customer system, payment processing system, Policy Center, Billing Center and DMS** by organizing meetings.
- Established a common **JSON message** structure in close collaboration with **enterprise architects** and tech leads, to ensure seamless communication between systems using **PUBSUB messaging protocol**. This standardized message **structure streamlined data exchange, enhanced interoperability, and facilitated efficient integration** across the **project ecosystem**.
- Conducted User Story Writing sessions and determined **Acceptance Criteria** for **PSPI** during **PI Planning**.
- Participated in **ART (Agile Release Train)** ceremonies and facilitated communication b/w business and development team.
- Assisted the **Product Owner** in maintaining the **Program Backlog** and the dependencies across different teams within the ART. Helped the Product owner to do vertical slicing and drafted the User Stories and to maintain the Program Backlog.
- Assisted the Scrum Master in conducting **ART ceremonies** such as **PI Planning, System Demo, Product Increment review and Inspect and Adapt workshops**. Assisted in creating **sprint reports** (Burndown/Burnup Charts, information radiators).
- Identified and captured the **publisher rules** and **subscriber rules** for **CDMS** by organizing meetings with the developers.
- Actively Involved in capturing requirements for integrating **Corporate Data Management System** with **Legacy System** to enable **synchronization** between the two systems by conducting requirements gathering sessions and **creating user stories**.
- Responsible for **capturing, analyzing, and documenting the comprehensive storage and retrieval requirements** for the **Document Management System (DMS)**, which are **utilized for storage, retrieval, and efficient search of critical documents**.
- Responsible for capturing data requirements of each document for **quote, issuance, invoice, and cancellation documents**.
- Responsible for capturing the **data mapping** requirements which includes the **transformation rules** between **Policy Center/ Billing Center** and **DMS** thereby enabling successful communication of data that needs to be printed on the documents.
- Assisted the QA team in creating the **test cases, test scenarios and test execution** and assisted in performing **unit testing**.
- Assisted the Scrum Master & Product Owner in Creating **User Stories, Backlog Grooming, Sprint Planning, and breaking down user stories** into tasks by using the **JIRA** agile project management tool to enhance transparency, and efficiency.
- Conducted **user acceptance testing (UAT)**, employing **robust test scenarios and acceptance criteria, to validate system functionality, identify defects**, and ensure compliance with **intricate business requirements and end-user expectations**.
- Assisted in **change management** activities, this involved conducting **end-user training** sessions, **providing comprehensive user support**, and facilitating the **seamless transition process** from the Legacy System to the new modernized systems.

- Took responsibility for designing and creating **mockup** screens for the **search application**, closely collaborating with stakeholders to elicit and understand their requirements. Employed **industry-standard design tools** and techniques to transform **conceptual ideas** into representations, ensuring accurate **visualization and alignment** with user expectations.
- Actively participated in **defect triage** meetings, collaborating with the **QA team** to prioritize and assess the **severity of defects**, utilizing key factors such as **impact analysis, risk assessment, business priorities, and customer impact analysis**.

Environment: SAFe, MS Excel, JIRA, SharePoint, Guidewire Policy Center, Billing Center, Claims Center, SOAP UI, Micro Focus ALM.

The Hartford, Hartford CT.

Nov 2018 to Sep 2019

Business analyst

Workflow optimization of **underwriting** and **risk assessment** processes leveraging **Microsoft Azure**. The project integrated and consolidated data from **CRM** systems, external data sources, and existing **claims management system**. **improving efficiencies** and **reducing financial risks**. **Data extraction, transformation**, and loading processes ensured **accurate and reliable data**. Appropriate **data models** were established, conforming to **industry standards**. **Advanced analytics** using **Azure Machine Learning** enabled **risk pattern identification, loss ratio evaluation, and pricing strategy assessment**. Interactive **Tableau dashboards** provided actionable insights to **underwriters and risk analysts**, Leading to **15% improvement in risk assessment accuracy**.

Roles and Responsibilities:

- Collaborate closely with key stakeholders, including **underwriters, risk analysts, and cross functional IT teams**, to gather and document comprehensive business requirements pertaining to **underwriting and risk assessment processes**.
- Analyzed **technical & business risks** and collaborated with **developers & data engineers** to create **migration strategies**.
- Worked closely with the development team to create **mock-ups, wireframes, and UML diagrams like Use Case diagrams, Activity Diagrams and Sequence Diagrams using Lucid Chart** that illustrated a layout **system architecture and data models**.
- Facilitated collaborative efforts that led to **identification of MVP/MRF** and aided in developing a roadmap for distinctive features. Assisted the **product owner** and **SME's** of team to get **SWAG estimates** to enable release planning.
- Developed comprehensive **high-level architectural plans** that outline overall structure, components, and relationship to how the platform will connect and integrate seamlessly with existing systems securely and efficiently utilizing **Azure API, Azure Functions, Azure Event Hubs, and Azure Cosmos DB** to facilitate secure and efficient **data exchange**.
- Cooperated in defining **Azure Functions** for seamless computing and **integration of new data to Azure cosmos DB** (storage service) and the **Azure SQL DW**, utilized **Azure Stream Analytics** for **real-time data analysis**.
- Assisted in **implementing Datawarehouse** by identifying all the **facts and dimensions**, participated in the designing of **Schema**. This action ensured the effective integration, and retrieval of data for analytical reporting and decision-making.
- Created **data mapping document**, assisted in performing **ETL operations** using **Azure Data Factory**, coordinated in constructing **OLAP queries**, performed various **OLAP operations to create reports**, helped in enhanced decision making.
- Utilized **SQL queries** which were specifically designed to extract and manipulate relevant data stored in the **data warehouse**, allowing for thorough **analysis**, and reporting on critical factors impacting the **project's goals and objectives**.
- Produced accurate and comprehensive **REST API** documentation using **SWAGGER framework** and performed functional API testing using **POSTMAN** to verify the data response format in the **XML or JSON** in accordance with system requirements.
- Collaborated with Business Intelligence team to design and create and design customize interactive reports like **dashboards and graphs** using **Power BI** to provide **visual insights** into **patterns, frequency, and variations of different health data**.
- Coordinated closely with **release managers & development team** playing a pivotal role on the **release days** to ensure the **deployment monitored smoothly**. Actively participated in **release planning, conducting thorough risk assessments**.

Environment: Waterfall-Scrum Hybrid, JIRA, Confluence, Zephyr, Share Point, Windows 10, HTML, XML, DHTML, Lucid Chart, Spark SQL, MS Office, Azure API Management, Azure SQL DW, Azure Functions, Azure Stream Analytics, Azure cosmos DB, POSTMAN, SWAGGER, Power BI.

Max Life Insurance, Bangalore, INDIA

May 2017 to Oct 2018

Business Intelligence Systems Analyst

The objective of the project involved the creation of an **Enterprise Data Warehouse (EDW)** to establish a **centralized repository** for data sourced from diverse departments within the organization. By integrating a **Business intelligence (BI)** tool with the **data warehouse**, **stakeholders** were able to gain **valuable insights** into **customer buying patterns** through **historical data**, facilitating the identification of the most **lucrative distribution channel**.

Roles and Responsibilities

- Familiarized with **data warehouse, data mart** and **Business Intelligence** concepts by performing literature review.
- Conducted thorough analysis of existing business processes to ensure comprehensive understanding for the project.
- Facilitated highly collaborative **Joint Application Development (JAD)** sessions and conducted interviews with **SMEs and stakeholders** to gather detailed **functional, non-functional, user, and system** requirements using **collaborative techniques**.

- Analyzed **Data mart** business requirement and identified and located various disparate sources for **data extraction**.
- Documented business, functional, and non-functional requirements and segregated them into **Use Case Specification**.
- Assisted in developing **Conceptual** and **Logical Data Models** with the help of **Entity-Relationship (ER) Diagrams**. Established **Facts, Dimensions** and identified a **schema** for the **data marts**.
- Conducted **exploratory analysis** of the source system to determine **data mapping** and **transformation requirements**.
- Conducted and participated in walkthroughs to discuss certain issues with the **development, design, and QA team**.
- Executed **SQL queries** to retrieve data from database and validated as per requirements.
- Used **Power BI** to create standard and **interactive reports** based on business requirements to represent the **customer purchasing patterns** with different product preferences and prediction of the future outcomes by **converting data** into **actionable insights**.

Environment: Waterfall-Scrum hybrid, MS Visio, MS Office, SharePoint, Amazon Web Services, MS SQL Server, Informatica PowerCenter, SSAS, Power BI.

Bajaj Allianz, Hyderabad, INDIA

Nov 2015 to Apr 2017

Business Systems Analyst

Worked on the **Policy Center, Billing Center** enhancements/defect fixes Perform gap analysis and **defect analysis** to identify the holes in the system process and provide solutions to **resolve and deploy enhancements/fixes** as part of monthly maintenance releases. The project is to consolidate different server environments from different geographic locations into one **centralized environment** and location for ease of maintenance and **cost control**.

Roles & Responsibilities :

- **Analyzed client system** and **business processes** and Prepared requirements document for **Commercial Auto, Inland Marine, Crime, Worker & Compensation , Business Owners Policy, Commercial Output Policy, and Commercial Property Package**.
- Conducted user interviews, gathered requirements, analyzed the requirements by using **MS Visio**, and **Requisite pro**.
- Facilitate meetings with the **Dev Team** and **Sentry team** to elaborate **Billing Center** functionalities such as **Close Policy Date, Trouble tickets and Holds, Payment Requests**, etc. successful implementation of these functionalities within the system.
- Participate in the development of **Billing Center - Policy Center User Stories**.
- Performed **Integration testing, System testing, Regression testing** and **Performance testing** of **Billing Center, Policy center** and **Payment manager** in the application based on the business requirements.
- Conducted presentations of the **QA test** results with analysis to the stakeholders and users and documented Involved in Inception Phase and prepared **vision statement** and initial data models that contain Business Requirement Documents and supporting a document that contains the essential business elements and detailed definitions.
- **Designed and Customized data models** for **Data warehouse**.

Environment: SSIS, SQL Server, SQL Server Data Tools for Microsoft Visual Studio , MS Excel, MS Access, Waterfall Methodology, JIRA, HP Quality Centre , MS Project, Microsoft Visual Studio, Microsoft Windows Server.

Apposite Learning Solutions, Hyderabad, INDIA

Jun 2015 to Nov 2015

Junior SQL Developer

The project aimed to improve the query response time and overall system performance by **optimizing SQL queries, indexes**, and **database configurations**. Additionally, we implemented partitioning **strategies and optimized data models** to accommodate the growing **data volumes** and **enhance scalability**. The solution resulted in significant improvement of **approximately 40 % in query response time** and overall system performance.

Roles & Responsibilities

- Assisted in analyzing and identifying areas for performance improvement within the database system.
- Collaborated with **SQL Developers** to **optimize SQL queries** by eliminating **redundant code** and **improving join strategies**.
- Assisted in implementing and **fine-tuning indexes** to enhance **data retrieval speed** and **optimize query execution**.
- Participated in **database configuration** reviews and worked on **optimizing memory allocation, buffer size, and cache settings**.
- Performed and used **Aggregate Functions , String Functions** like **CONCAT, SUBSTRING** and **REPLACE** for manipulating string data and **Logical Functions** like **IF(), CASE, IN()** and **LIKE** Functions to handle different types of scenarios.
- Participating in **code reviews** and providing feedback to ensure the quality, efficiency, and **maintainability of SQL code**.
- Contributed to the implementation of partitioning strategies based on data usage patterns to improve scalability.
- Collaborated with the team to redesign data models to reduce data duplication and optimize data storage and retrieval.

Environment: Waterfall, Microsoft SQL Server, Microsoft Teams, Jira, SQL Server Management Studio, Server profiler.

Education: BSc in Information Systems, Osmania University.
