

Sai Priya

Mobile. No: +1 860 331 8180

Email: l.saipriya783@gmail.com

Professional Summary:

- Around 8+ years of experience as a **data analyst** and **business analyst**, proficient in conducting comprehensive **gap analysis** and **ETL** testing to drive process improvement and data integrity.
- Skilled in working with **HL7** (Health Level 7) messaging standards and **FHIR** (Fast Healthcare Interoperability Resources) to facilitate seamless data exchange and interoperability across healthcare systems.
- Experienced in implementing **HL7** and **EDI** interfaces to enable seamless data exchange between the claims management system and external stakeholders, enhancing operational efficiency.
- Strong background in **Medicare**, **Medicaid**, and **HIPAA**, specializing in optimizing healthcare claims management systems.
- Thorough knowledge of **healthcare regulations** and compliance, including **HIPAA**, **HITECH**, and **GDPR**, ensuring privacy and security of protected health information (**PHI**) and compliance with data protection requirements.
- Strong understanding of **SNOMED-CT** terminology for standardized clinical coding, enabling accurate representation and analysis of medical data for improved decision-making.
- Expertise in healthcare quality measurement and reporting, including **HEDIS** (Healthcare Effectiveness Data and Information Set), supporting performance improvement initiatives and benchmarking activities.
- Proficient in working with both **ICD-9** and **ICD-10** coding systems, supporting accurate classification and analysis of medical diagnoses and procedures for coding compliance and healthcare reporting.
- Strong understanding of Electronic Health Records (**EHR**) and Electronic Medical Records (**EMR**) systems, including **EPIC**, facilitating efficient data capture, storage, and retrieval to support clinical decision-making and healthcare analytics.
- Accomplished data analyst with a strong understanding of the **SDLC**, including experience in **Agile** and **Waterfall** methodologies, ensuring successful data analysis and reporting throughout the project lifecycle.
- Skilled in facilitating discussions and workshops to validate and refine the **BRD**, using techniques such as Joint Application Development (**JAD**) sessions to ensure active participation and consensus among stakeholders.
- Expertise in creating detailed **BRD**, capturing **functional** and **non-functional** requirements, and ensuring alignment with organizational goals.
- In-depth knowledge of regulatory frameworks including **FCRA** (Fair Credit Reporting Act), **FINRA** (Financial Industry Regulatory Authority), and **SEC** (Securities and Exchange Commission).
- Strong understanding of **User Acceptance Testing (UAT)** processes, collaborating with business users to define test scenarios, execute tests, and validate data analysis outputs against predefined acceptance criteria.
- Experience using **JIRA** project management software to create **user stories** for seamless communication and transparency.
- Proficient in **Source-to-Target** data mapping, ensuring accurate data transformation and integration between systems, and maintaining data integrity and alignment with business needs and objectives.
- Expertise in creating and maintaining comprehensive **data dictionaries** and **data definition documents**, ensuring consistency and clarity in data analysis processes.
- Experienced in **Data Cleansing**, **Data Validation**, **Data Verification**, **Data migration** using **ETL** tools like **Talend** and **Informatica** to facilitate data migration processes.
- Extensive experience in **Data Modeling** with Strong proficiency in designing and implementing **Snowflake Schema** and **Star Schema** data models to support efficient data storage, retrieval, and analysis.
- Skilled in data manipulation and transformation using **SAS** programming, facilitating data cleaning, aggregation, and statistical analysis.
- Proficient in working with various database systems, including **MySQL** and **Oracle**, to retrieve and analyze data, ensuring data accuracy, integrity, and security.
- Knowledgeable in cloud platforms such as **AWS**, **Azure**, and **GCP**, leveraging their data storage, processing, and analytics capabilities to scale and optimize data analysis workflows.
- Skilled in data analysis, **data modeling**, and **data visualization** techniques, utilizing tools such as **SQL**, **Python**, and **Tableau** to extract insights and drive data-driven decision-making in healthcare settings.

- Skilled in joining multiple database tables using various types of **SQL joins** (e.g., inner join, outer join, cross join) to combine and analyze data from different sources.
- Experienced in setting up and configuring healthcare data pipelines on cloud platforms, utilizing services like **AWS Glue**, **Azure Data Factory**, and **GCP Dataflow** to extract, transform, and load data for analysis.
- Skilled in collaborating with cross-functional teams, including developers, business stakeholders, and project managers, by utilizing **JIRA's** features for seamless communication and transparency.

Technical Skills:

Cloud	AWS, Azure, GCP, Data Bricks
Analysis Tools	My SQL, SQL server, Tableau Desktop, MS-Excel, Power BI, Spreadsheets, Microsoft Azure.
Languages	SQL, SAS, Python, CSV, XML
Tools	Git, JIRA, Informatica, Talend
Database	SQL Server, Oracle, MS Access, MYSQL
Computer Skills	Data visualization, Data cleaning, Data Mining, Data Warehouse, Microsoft Office, problem-solving, and analytical abilities.
Methodologies	Agile, Scrum, Waterfall

Professional Experience

Client: Elevance Health, Wallingford, CT.

Sep 2021 - Present

Role: Business Data Analyst

Project: Data Transfer from Legacy Systems

Roles & Responsibilities:

- Analyzed the data structure and format of **legacy systems** to understand their compatibility with modern standards. Identify potential gaps and challenges in **data transfer**.
- Ensured compliance with healthcare data privacy and security regulations, such as the Health Insurance Portability and Accountability Act (**HIPAA**), Health Information Technology for Economic and Clinical Health Act (**HITECH**), and Healthcare Effectiveness Data and Information Set (**HEDIS**).
- Familiarity with Fast Healthcare Interoperability Resources (**FHIR**) standards for data exchange and interoperability. Ensure data compatibility and adherence to **FHIR** guidelines during data transfer.
- Identified gaps between legacy systems and target systems in terms of **data structures**, **formats**, and **functionalities**. Develop strategies to bridge these gaps and ensure smooth data transfer.
- Understood and worked with International Classification of Diseases, Tenth Revision (**ICD-10**) codes for accurate coding and classification of medical data during the data transfer process.
- Worked with **Epic** and other healthcare systems such as Health Quest and Relay to facilitate data transfer and integration processes. Ensure efficient and secure data exchange between systems.
- Utilized Health Level Seven (**HL7**) and Electronic Data Interchange (**EDI**) interfaces for data transfer and integration. Develop and maintain these interfaces to ensure seamless data exchange.
- Conducted **source-to-target mapping** exercises, identifying data sources from legacy systems, and mapping them to target data models.
- Developed and maintained **VBA** scripts in **MS Access** to automate repetitive tasks and streamline data processing.
- Created custom **VBA** functions and macros to enhance user productivity and efficiency.
- Assisted in data migration from legacy systems to **MS Access** databases, ensuring data accuracy and completeness.
- Assisted in the implementation of **EMR** systems, working with vendors and IT teams to customize the platform to meet the specific needs of the healthcare organization.
- Assisted in data migration from legacy systems to **EMR** platforms, ensuring data accuracy and completeness.
- Developed **ETL/ELT** processes using **Python** and **SQL** to extract data from legacy systems, transform it based on business rules, and load it into modern data platforms.
- Developed data models, including **Snowflake Schema** and **Star Schema**, to facilitate efficient data transfer and analysis.

- Adapted to both **Agile** and **Waterfall** project management methodologies based on the project requirements. Collaborated with cross-functional teams, participated in Agile ceremonies, and provided timely updates on data transfer progress.
- Utilized **MS Word** to create comprehensive business requirement documents (**BRDs**) and functional specifications.
- Leveraged **MS Excel** for data analysis, creating pivot tables, charts, and graphs to visualize trends and patterns.
- Conducted Joint Application Development (**JAD**) sessions with stakeholders, including system users, developers, and subject matter experts. Gather requirements, clarify objectives, and define data transfer processes.
- Created Business Requirements Documents (**BRDs**) outlining the scope, objectives, and functional requirements for data transfer projects. Define clear and comprehensive requirements to guide the development and implementation process.
- Prepared data for analysis by performing data cleansing and transformation tasks using **Amazon QuickSight's** data preparation capabilities. **Cleaning** and **validating data**, **handling missing values**, and **transforming data** into a suitable format for **analysis**.
- Developed use cases that illustrate the various scenarios and interactions involved in data transfer. These use cases serve as a reference for **testing**, **validation**, and **ensuring the accuracy** of the transferred data.
- Coordinated and executed **UAT** activities to verify the successful transfer of data. Collaborated with end-users and stakeholders to validate data accuracy, functionality, and user experience.
- Use **JIRA** or similar project management tools to track and manage data transfer tasks, issues, and progress. Ensure timely resolution of issues and effective communication with the team.
- Proficient in working with cloud platforms like **Amazon Web Services (AWS)** and **Microsoft Azure**. Experience with data storage and retrieval using **SQL Server**, **SQL**, **Oracle databases**, and utilizing **AWS S3** storage for efficient data transfer.
- Managed project resources using **Microsoft Project**, allocating tasks, estimating effort, and tracking resource utilization. Monitored resource availability and identified potential bottlenecks, proactively adjusting schedules and assignments to optimize resource allocation.
- Created interactive and visually appealing data dashboards and reports using **Power BI** and **Tableau**. Transform raw data into meaningful insights to facilitate **decision-making**.
- Integrated **Power BI** and **Tableau** with other tools and platforms, such as **SQL Server**, **Azure**, **AWS**, **Purview** or **Excel**, to leverage additional functionalities and expand data analytics capabilities.

Environment: HIPAA, HITECH, FHIR, ICD-10, Epic, HL7, EDI, JAD, BRD, EMR, UAT, JIRA, AWS, Azure, SQL, SQL Server, Oracle, Power BI, Tableau, Purview, Snowflake Schema, Star Schema, Amazon QuickSight, JAR/JAD, MS Office, MS Access, Microsoft Project

State of Kentucky, Frankfort, KY.

Jun 2019 - Aug 2021

Role: Business Data Analyst

Project: Claims Management

Roles & Responsibilities:

- Maintained regulatory compliance by managing and analyzing data inside the claims management system in accordance with **HIPAA**, **Medicare**, and **Medicaid** regulations.
- Used **SNOMED** for meaningful reporting, data analysis, and insights into the types of diagnoses, procedures, and treatments mentioned in the claims.
- Analyzed and interpreted **CCDA** documents, collaborating with healthcare professionals and stakeholders to understand and document business requirements related to **CCDA** utilization.
- Participated in **FHIR** data mapping and transformation activities, ensuring data integrity and adherence to **FHIR** specifications.
- Conducted in-depth **data analysis** on claims data to identify trends, patterns, and anomalies, providing actionable insights to improve claims processing and reduce errors.
- Monitored **EDI** data transactions and proactively addressed errors and discrepancies in data transmission.
- Investigated and resolved **EDI**-related issues, collaborating with IT and business teams to ensure timely resolution.
- Collaborated with stakeholders to define and prioritize key performance indicators (**KPIs**) and develop dashboards and reports to monitor and track claims metrics.
- Created **BRDs** and **FRDs** to capture **functional and non-functional requirements** accurately.
- Assisted in the implementation of **Agile** methodologies, participating in daily stand-ups, sprint planning, and retrospectives to ensure efficient project delivery.

- Played a key role in **JAD** sessions, facilitating requirements gathering, documenting user stories, and translating business needs into technical specifications.
- Analyzed existing clinical workflows and identified opportunities to optimize processes through **EMR** solutions.
- Generated reports and dashboards from **EMR** data to support quality improvement initiatives and healthcare decision-making.
- Created and maintained comprehensive documentation, including **data dictionaries**, **data mapping documents**, and process **flow diagrams**, ensuring accuracy and clarity for future reference.
- Analyzed **healthcare claims** data to identify patterns and trends in utilization, costs, and reimbursement. Conducting **claims data validation** and reconciliation to ensure data accuracy and reliability.
- Conducted user acceptance testing (**UAT**) to validate data accuracy, system functionality, and adherence to business requirements, ensuring a high-quality Claims Management System.
- Conducted **source-to-target** mapping exercises, mapping data sources to target data models, and ensuring data integrity and accuracy during **ETL/ELT** processes. Ensured compliance with healthcare data standards, privacy regulations, and security protocols.
- Developed custom reports and dashboards in **MS Access** to present actionable data to stakeholders.
- Conducted data analysis using **MS Access** queries and **VBA** code to extract insights and generate reports.
- Created custom **Excel** functions using **VBA** to perform complex calculations and data manipulations.
- Created and maintained **data mapping** documents to document the relationships between source and target data elements. Developed data models, including **Snowflake Schema** and **Star Schema**, to organize and represent healthcare data effectively.
- Stayed abreast of emerging technologies, industry trends, and best practices in healthcare data analytics and **EDW** solutions. Identify opportunities for process improvement, performance optimization, and innovation in data management and reporting practices.
- Utilized advanced **SQL querying** skills to extract, manipulate, and analyze healthcare data from databases.
- Proficiently utilized **SQL Server**, **Oracle**, and other database management systems to extract, transform, load (**ETL**), and analyze claims data for reporting and decision-making purposes.
- Collaborated with IT teams to implement **Oracle** system enhancements and upgrades, ensuring minimal disruption to business operations.
- Leveraged **Snowflake's** features and capabilities to perform data analysis tasks. Writing **SQL queries** and utilizing **Snowflake's** functions and syntax to extract, transform, and analyze data stored in **Snowflake**.
- Conducted advanced statistical analysis using tools such as **SAS**, **Python**, and **R** to identify trends, patterns, and anomalies in claims data, enabling proactive risk assessment and fraud detection.
- Performed data exploration and analysis using **Amazon QuickSight** to uncover patterns, relationships, and anomalies in the data. Applying statistical techniques and data visualization best practices to derive actionable insights.
- Utilized **Excel's** data cleaning and transformation features to identify and resolve data inconsistencies or errors.
- Utilized **Tableau** and **Power BI** to design and develop interactive and visually appealing dashboards, reports, and visualizations to present complex healthcare data in a clear and actionable manner.
- Conducted training sessions and provided technical guidance to end-users on system functionalities, data analysis tools, and best practices for utilizing the **Claims Management System effectively**.
- Assisted in the **migration** of data and applications to **AWS**, leveraging **S3** for data storage and collaborating with cloud engineers to ensure optimal performance and data security.
- Acted as a liaison between **business** users and technical teams, effectively translating business requirements into technical specifications and ensuring alignment between stakeholder needs and system functionality.
- Integrated data from multiple sources, such as electronic health records (**EHRs**), claims data, and operational systems, using **Tableau** and **Power BI** to create a unified view of healthcare data for comprehensive analysis.

Environment: HIPAA, JAD, UAT, ETL, FHIR, CCDA, SNOMED, EDI, Python, R, SQL Server, Oracle, Snowflake, SAS, AWS, S3, Amazon QuickSight, Aws Redshift, EDW, Excel, PowerBI, NoSQL, MySQL, MS Access, VBA

Madrigal Pharmaceuticals.PA

Jan2018 - Apr2019

Role: Business Data Analyst

Project: Data Quality Improvement Initiatives

Roles & Responsibilities:

- Conducted in-depth analysis of healthcare data to identify **data quality** issues, inconsistencies, and anomalies.
- Evaluated the accuracy, completeness, and consistency of healthcare data to ensure compliance with **quality standards** and regulations.
- Collaborated with data governance teams to ensure compliance with **HIPAA** and security regulations in handling data collected from **EHR, EMR** and clinical information systems.
- Developed and implemented **data cleansing** strategies to address data quality issues, such as **data duplication, missing values, and outliers**.
- Verified the integrity and validity of healthcare data with **validation rules, data profiling techniques, and statistical analysis**.
- Conducted routine maintenance activities on **EDI** systems, including upgrades, patches, and performance tuning, to optimize system efficiency.
- Developed and executed test scripts for **EDI** data transactions to validate data accuracy and adherence to business rules.
- Worked closely with stakeholders to understand data quality requirements and translate them into **BRDs** and **FRDs**. Captured **functional and non-functional** data quality requirements to guide data improvement initiatives.
- Collaborated with cross-functional teams to integrate and transform data from various sources into a centralized database for analysis and reporting purposes.
- Employed **Informatica**, an enterprise data integration and management tool, to extract, transform, and load (**ETL**) data from various sources into target systems.
- Developed **VBA** macros to automate repetitive tasks in **Microsoft Excel**, such as data entry, formatting, and calculations.
- Created custom **Excel** functions using **VBA** to perform complex calculations and data manipulations.
- Conducted testing and quality assurance for **MS Access** applications to ensure functionality and data accuracy.
- Utilized **SQL** (Structured Query Language) to extract, manipulate, and aggregate data from **relational databases, data warehouses, and other data sources**.
- Performed **data manipulation** and analysis tasks using **Excel**, including **sorting, filtering, pivot tables, and formula-based calculations**.
- Created and maintained reports using **SQL Server Reporting Services (SSRS)** to facilitate data-driven decision-making and improve data visibility.
- Developed and maintained stored procedures and user-defined functions in **SQL Server** to encapsulate complex logic and improve code reusability.
- Optimized **SQL queries** to improve performance and ensure efficient retrieval of data from the database.
- Created comprehensive **data mapping** documents, outlining relationships between data **sources and target** data models.
- Developed data models, including **Snowflake Schema** and **Star Schema**, to support data quality improvement efforts.
- Developed **UAT** plans and test cases specific to data quality improvement initiatives.
- Extracted data from various sources, such as **flat files** or external databases, and transformed it into a suitable format for loading into **SQL Server databases**.
- I have Continuously monitored and evaluated data quality metrics, identifying areas for improvement, and implementing corrective actions to enhance the overall quality of healthcare data.
- Developed interactive and visually appealing reports and dashboards using **Power BI**, allowing stakeholders to access and analyze healthcare data in a user-friendly manner.
- Designed and build interactive visualizations and dashboards using **Tableau** and **Tableau Desktop**, enabling healthcare professionals to gain insights and identify trends in data.

Environment: EHR, EMR, SQL, Excel, Power BI, SSRS, SQL Server, flat files, Tableau, Informatica, ETL, MS Access, VBA

Eton Pharmaceuticals, Deer Park, Illinois.

Sep 2015-Dec2017

Role: Data Analyst

Project: Investment Analysis

Roles & Responsibilities:

- Conducted in-depth data analysis to support investment decision-making processes.
- Gathered, clean, and validated financial data from multiple sources, including **market data providers**, **regulatory filings**, and internal systems.
- Ensured compliance with regulatory requirements such as **FCRA** (Fair Credit Reporting Act), **FINRA** (Financial Industry Regulatory Authority), and **SEC** (Securities and Exchange Commission).
- Participated in the full lifecycle implementation of **ERP** systems, including requirements gathering, system design, testing, training, and post-implementation support.
- Conducted business process mapping and analysis to identify opportunities for process improvement and optimization within the **ERP** environment.
- Utilized **statistical analysis techniques** and quantitative models to evaluate investment opportunities and risks.
- Stayed updated on market trends, regulatory changes, and industry developments to inform investment research.
- Implemented data governance practices and security measures to protect sensitive financial data.
- Worked in both **Agile**, **SDLC** and **waterfall** environments, adhering to project timelines and deliverables.
- Utilized **JIRA** for task tracking, issue management, and collaboration with cross-functional teams.
- Collaborated with stakeholders in the financial sector to **gather** and **document business requirements**, ensuring alignment with industry-specific regulations and standards.
- Created **BRDs** and **FRDs** to capture **functional and non-functional requirements** accurately.
- Conducted **source-to-target mapping** exercises, mapping data sources to target data models, and ensuring data integrity and accuracy during **ETL/ELT**. Ensured compliance with regulatory requirements and financial data standards.
- Developed complex **SQL queries** and stored procedures to generate financial reports and dashboards, providing valuable insights to stakeholders.
- Demonstrated advanced proficiency in **Excel** and **PowerPoint** to manipulate and analyze complex data sets, create informative visualizations, and develop impactful presentations for executive-level stakeholders.
- Created detailed **UAT** test cases based on functional requirements and user stories. Ensured test cases covered all critical scenarios and edge cases to validate system functionality and user workflows.
- Designed and maintained databases, including schema design, table creation, and optimization. Implement **SSIS** packages for **data migration**, database backup, and performance tuning.
- Utilized **AWS** services, including **S3** (Simple Storage Service), for **data storage, retrieval**, and processing.
- Conducted end-to-end testing and validation of **Oracle** applications to ensure proper system functionality and adherence to business requirements.
- Designed and maintained databases using **SQL Server** and **Oracle** for efficient data storage and retrieval.
- Developed and optimized **SQL queries** to **extract, manipulate**, and analyze large datasets.
- Created and configured data sources within **Azure Purview** to establish a centralized **metadata** repository.
- Cataloged and organized diverse data assets, including databases, files, and **APIs**, using **Azure Purview**.
- Developed **metadata** schemas and taxonomies to enable effective data discovery and search capabilities.
- Developed comprehensive **data dictionaries** documenting financial data elements, definitions, and **metadata**. Ensured consistent understanding and usage of financial data across the organization, promoting data governance and data quality.
- Prepared data for analysis by performing data cleansing and transformation tasks using **Amazon QuickSight's** data preparation capabilities. Cleaning and validating data, handling missing values, and transforming data into a suitable format for analysis.
- Performed data cleansing and validation tasks to ensure data accuracy and integrity. Utilized **Excel's** data cleaning and transformation features to identify and resolve data inconsistencies or errors.
- Created visually appealing and interactive dashboards using **Power BI**, **Excel**, or other visualization tools.
- Created interactive dashboards and reports using **Power BI** and **Tableau** to present investment insights to stakeholders.
- Transformed complex financial data into visually appealing visualizations, enabling easy interpretation and **decision-making**.
- Applied **Python** libraries such as **Pandas** and **NumPy** for **data manipulation, cleaning**, and advanced analytics.

Environment: UAT, BRD, FRD, JIRA, ETL/ELT, Data Modeling, Data Mapping, AWS, S3, SQL Server, Python, NumPy, Pandas, Oracle, SQL Server, SQL, Power BI, Tableau, Azure, Purview, Metadata, Excel, MS Access, VBA

EDUCATION :

Bachelor of Pharmacy , JNTU, India

May-2015.
