

Sam Akram

Senior Full Stack Engineer (Backend Focus)

✉ idevsam7@gmail.com 📍 4600 Alfano Loop, Round Rock, TX 🔗 [linkedin.com/in/sam-a-411aa1162](https://www.linkedin.com/in/sam-a-411aa1162)

PROFILE

With over 12 years of experience, a Senior Full Stack Engineer specializing in backend systems design, optimization, and performance tuning. Expertise spans key backend technologies including Node.js, Python (Flask, Django), Java (Spring Boot), and JavaScript, with a focus on building efficient and scalable APIs. Proficient in managing and optimizing databases such as PostgreSQL, MongoDB, and Redis, ensuring data integrity, high availability, and fast retrieval. Extensive experience in enhancing server-side performance, integrating AI-driven features, and leveraging Web3 technologies to create innovative and secure solutions. Known for a strong ability to lead teams in delivering complex backend architectures that drive high-performance web and mobile applications.

PROFESSIONAL EXPERIENCE

- | | |
|--|-------------------|
| Lead Software Development Engineer, Amgen | 06/2022 – Present |
| <ul style="list-style-type: none">• Led the backend development of high-performance web and mobile applications using Node.js, Python (Flask), and Java, focusing on scalable, server-side solutions and API optimization.• Designed and implemented robust RESTful APIs, ensuring seamless communication between frontend and backend systems while enhancing system performance.• Integrated AI technologies, including OpenAI's GPT-3, to drive advanced features like NLP, improving user engagement and delivering intelligent, data-driven experiences. | |
| Senior Full Stack Engineer, JPMorgan Chase & Co. | 09/2018 – 06/2022 |
| <ul style="list-style-type: none">• Spearheaded backend development using Python (Flask, Django), Node.js, MongoDB, and Redis, optimizing system performance and scalability for enterprise-level applications.• Designed and developed Python-based RESTful APIs to enhance data flow and reduce latency, ensuring seamless integration between frontend and backend systems.• Leveraged Python for real-time data streaming with Kafka and advanced search functionalities using Elasticsearch, driving improvements in system efficiency and user engagement. | |
| Software Engineer, Evernote | 03/2016 – 09/2018 |
| <ul style="list-style-type: none">• Enhanced user experiences by developing dynamic, responsive web and mobile applications with React, TypeScript, and React Native, focusing on performance and usability.• Optimized backend workflows using Java and Spring Boot, integrating MongoDB to ensure reliable, fast data access for millions of users.• Streamlined data handling by implementing Redis for efficient in-memory data storage and Elasticsearch for powerful, real-time search capabilities, improving overall application speed. | |

- Built and maintained RESTful APIs that facilitated smooth data communication between the client and server, enabling faster transactions and ensuring application scalability.

Full-stack Developer, Esurance

12/2012 – 04/2016

- Developed dynamic, responsive user interfaces using React, JavaScript, and TypeScript, ensuring seamless, high-performance experiences across both web and mobile platforms.
- Built backend services with Python (using Flask) and .NET, integrating with MongoDB to manage real-time data and optimize data processing speed for insurance applications.
- Designed and integrated RESTful APIs, facilitating efficient communication between frontend and backend, reducing latency, and improving overall system performance.
- Enhanced application performance by leveraging Redis for caching and Elasticsearch for fast, powerful search capabilities, improving data retrieval times and boosting user experience.

SKILLS

- | | |
|---|---|
| • React.js, Next.js, React Native, JavaScript, TypeScript, HTML5, CSS3, SASS, Redux, Bootstrap, Material-UI | • Node.js, Python (Flask, Django), Java (Spring Boot), Express, RESTful APIs, GraphQL |
| • PostgreSQL, MongoDB, Redis, Elasticsearch, Cassandra | • AWS (Lambda, S3, DynamoDB), Docker, CI/CD, Kubernetes |
| • API optimization, database tuning, real-time data processing, caching strategies | • OpenAI (GPT-3), Web3 technologies, blockchain integrations |
| • Git, GitHub, JIRA, Kafka, Elasticsearch, Redis, Docker, Kubernetes | |

PROJECTS

Roomie, *Stack: React.js, Babylon.js, Java (Spring), PostgreSQL*

Web app for managing shared living spaces, with room bookings, user collaboration, and expense management.

Krypton, *Stack: Next.js, Node.js, Astra DB, Web 3, Redis, TypeORM*

Web3 platform for decentralized data storage and blockchain management, leveraging Cassandra DB and Web3 technologies.

Bicycle Health, *Stack: React Native, Redux, Python, MongoDB, AWS (Lambda, S3), AI scikit-learn*

A mobile health app using AI-powered predictive analytics and personalized treatment plans to track patient progress and optimize care in real-time. Integrates machine learning with secure data storage via AWS.

Earth Fund, *Stack: Next.js, Web 3, Node.js, TypeORM, PostgreSQL, AWS (DynamoDB, Lambda Functions)*

Web3 platform for impact investments, enabling secure staking and blockchain-based funding for social impact projects.

EDUCATION

BS in Computer Science, *National University of Computer and Emerging Sciences*

2008 – 2012
