

Siddhant Gupta

Mount Laurel, NJ

siddhantguptaetc5m_sjv@indeedemail.com

+1201 708 8568

- Experience in various Domains of Banking and Finance, Transforming and Integrating Global AML Compliance, Tax Loss Harvesting Management, Credit Scoring and Loan System Enhancements, also worked under Traditional and Agile Software Development Lifecycle (SDLC) environments such as Scrum, Waterfall, and Waterfall-Scrum, Kanban, Less and knowledge in Scaled Agile Framework (SAFe) Environment with a potential to work with self - organizing and cross functional teams.
- Expertise on various Compliance and regulations such as Anti-Money Laundering (AML), 401(k), 403(b), IRA, Wash Sale Act, BASEL I, II, III, Dodd-Frank, Bank Secrecy Act (BSA), Comprehensive Capital Analysis and Review (CCAR), Suspicious Activity Report (SAR) , CDD , General Data Protection Regulation (GDPR), Financial Action Task Force (FATF) Recommendations
- Extensive knowledge of Capital Markets, Wealth Management, Asset Management, Mortgage, Portfolio Management, and Financial Services with good understanding of financial instruments like Equities, Derivatives (Futures, Forwards, Options and Swap), Mutual Funds, Exchange Traded Funds (ETFs), FOREX currencies, Commodities, Trade Life Cycle, Option Greeks.
- Ability to create and assist the Project Manager in creating Project deliverables like Project Plan, Project Scope Statement, Statement of Work (SOW), Proof of Concept, Project Charter once we get requirements from the stakeholders.
- Expertise in performing AS-IS and TO-BE for GAP analysis with proficiency in performing Root cause analysis, Stakeholder analysis, Market analysis, SWOT analysis, Risk Analysis, Cost-Benefit Analysis, Feasibility Reports, handling change requests.
- Extensive experience in analyzing and documenting Functional and Non-functional requirements, GUI requirements, Data requirements by conducting JAD sessions, Structured and Semi-Structured interviews, Document Analysis, Interface Analysis, Brainstorming sessions, Surveys, Focus Groups, Job shadowing, Requirement Workshops with different types of Stakeholders.
- Proficient in documenting the elicited requirements in Business Requirement Document (BRD), Functional Specification Document (FSD), Requirement Traceability Matrix (RTM) and System Requirement Specifications (SRS).
- Proficient with Use Case Design, analysis and scenarios, Business Process Modelling Notation (BPMN), Workflow Diagrams, Unified Modelling Language (UML) with expertise in creating Use Case Diagram, Activity Diagrams and Sequence Diagrams.
- Applied a diverse set of modeling tools, including Draw.IO, MS Visio, Balsamiq, and Lucidchart, to translate complex concepts into clear, visual representations contributing to enhanced data-driven decision-making and streamlined project collaboration.
- Detailed working knowledge and experience of SCRUM and its Ceremonies like Backlog Grooming (High level Grooming and low-level Grooming), Release Planning, Sprint Planning, Daily Stand-ups, Sprint Review & Sprint Retrospective Meetings.
- Expertise in writing User Stories and their Acceptance Criteria and assisted PO's in defining Definition of Ready (DOR) and Definition of Done (DOD), INVEST (Independent, Negotiable, Valuable, Estimable, Small, Testable) criteria for user stories.
- Highly proficient in the management and processing of large-scale, complex data sets across disparate systems, adeptly utilizing big data technologies, including Spark, Scala, Kafka, and Hadoop ecosystem tools, aiding Business decisions.

- Created Maplets and performed Data mapping and documented it to setup the Extract Transform Load pipeline for successful Data Migration and Data Integration. Devising the Sunset Strategy for the Legacy systems in Data Migration.
 - Well acquainted in defining Conceptual and Logical Data Models and creating Entity-Relationship (ER) diagrams as well as successfully implemented Dimensional Data Models by creating Schema models like Star Schema and Snowflake Schema.
 - Expert in creating and documenting Data Profiling and Cleansing, creating Data Dictionary, and Data Mapping Specification.
 - Proficient in effectively and seamlessly utilizing industry standard tools such as Microsoft Visio, Lucidchart and Signavio for Business Process Management (BPM) , Process Modeling, and Business Process Re-engineering (BPR)
 - Well versed with Online Transaction Processing (OLTP) and Online Analytical Processing (OLAP) including ROLAP, MOLAP and HOLAP and experience in performing OLAP operations like Roll-up, Drill-down, Slicing, Dicing, and creating Pivot table.
 - Utilized Informatica PowerCenter for ETL (Extract, Transform, Load) processes, including mapping requirements and report design coordination with developers. Skilled in utilizing SQL for robust data verification and validation within the ETL processes, ensuring data accuracy, consistency, and quality adherence to support data integrity for informed decision-making
 - Extensive knowledge in creating Relational Databases (RDBMS), Data Warehouse, Data Marts, Operational Data Store (ODS).
 - Highly adept and experienced in the realm of API integration, with a strong command of protocols such as SOAP, REST, and RPC. Proficiently and meticulously conducted API endpoint validation by leveraging advanced tools like POSTMAN and SOAPUI
 - Assisted the UI/UX team in making them understand as to how the users would be viewing the data. Reviewed the structure of the Request body and performed Post, Get, Put, delete operations using Swagger and performed API testing in POSTMAN.
 - Facilitated and assisted Testers in performing User Acceptance Testing, (UAT), Smoke and Sanity Testing, Regression Testing and assisted in creating and maintaining artifacts like Test Plans, Test Scenarios, Test Cases and Defect Logs in the Software Testing Life Cycle. Well versed with Automation Testing Frameworks like Test Driven Development (TDD).
 - Skilled in Business Intelligence and reporting with experience in creating Static Reports, Ad hoc reports, Interactive Reports and Dashboards using tools like Tableau, Power BI and creating insights and stories from reports for bold decision making.
 - Proficient with JIRA, extensively, as an end-to-end Project Management tool and issue tracking tool, adeptly using various addons like GitLab for Continuous Integration, and Cucumber for automation testing, in a proficient manner.
 - Highly proficient in the utilization of SQL to create highly customized, data-driven reports and dashboards, enabling advanced decision-making. Furthermore, within JIRA and Confluence, I skillfully employ SQL to derive ad-hoc reports and dashboards, seamlessly managing projects and fostering cross-team collaboration and knowledge sharing
 - Proficient in effectively leveraging CI/CD testing using Jenkins to optimize pipelines, proactively streamline software development workflows, and successfully foster collaboration, thereby ensuring efficient and timely releases. Additionally, I am highly skilled at expertly identifying automation opportunities and strategically aligning development processes.
 - Highly adept with Service-Oriented Architecture (SOA) principles, identifying modular services aligned to business capabilities, and guiding development teams to build secure and reusable services to enable organizational agility and digital transformation
- Technology Stack

Business tools JIRA, Tableau, MS office, SQL, Confluence,
Project management tools MS Project, MS Visio, MS SharePoint, HP-PPM,
Requirement management tools JIRA, Confluence, MS Office, HP ALM, Rally, Helix RM
Reporting tools Tableau, MS office Suite, Power BI, Looker, QlikView
Architecture/Framework Service Oriented Architecture (SOA), 3 Tier Architecture, Cloud Platform (SaaS & IaaS)
Testing tools HP-Quality Center, Jenkins, Selenium , TestRail , Cucumber , HP ALM.
Databases MySQL version, MS Access , Oracle Database , MongoDB.
Languages Python, JAVA, C++, C, NodeJS
Data warehousing Data Marts, Data Modeling, OLAP, OLTP, Data Mining, ETL, Slicing/Dicing, Drill Down/
Roll up, Pivot, Star and Snowflake Schema

Work Experience

Sr. Business System Analyst

TD Bank - Mount Laurel, NJ

June 2022 to Present

This project aims to revamp TD Bank's KYC process, reducing costs and boosting revenue. It involves streamlining KYC operations, implementing advanced identity verification, and deploying cutting-edge analytics to improve approval rates. Furthermore, it includes transitioning to an intelligent watchlist screening system and establishing continuous monitoring for regulatory AML compliance.

Roles and Responsibilities:

- Collaborated closely with stakeholders, regional Anti Money Laundering teams, and regulatory authorities, to comprehend their unique requirements, expectations, and issues. Conducted and documented in-depth interviews and facilitated Brainstorming sessions to extract intricate details and nuances of AML compliance needs. Documented a comprehensive record of all gathered requirements, including SRS, BRD, PRD, FRD ensuring clarity, completeness, and traceability.
- Interacted with the Subject matter experts (SME) to understand the high-level requirements and scope items based on Impact analysis. Documented business and functional requirements in requirements document. Leveraged expertise in AML regulations, including FATF recommendations, to ensure that the project adhered to international compliance standards.
- Assisted the Product Manager in defining a clear and compelling Product Vision that aligned with TD Bank's overarching Anti Money Laundering objectives. Created a well-defined Product Roadmap, outlining the project's strategic milestones and timelines. Established a Stakeholder Matrix to identify key players and their roles in the project's success.
- Analyzed the existing AML systems by implementing Gap Analysis and created the AS-IS & TO-BE documents to identify inefficiencies, compliance gaps in cross-border transactions, and enhancements for the project. Actively contributed to the solution by focusing on key aspects, including the development of centralized AML platform, standardized risk assessment frameworks, advanced analytics, cross-regional collaboration tools, and robust regulatory compliance measures
- Facilitated Joint Application Development (JAD) sessions to expedite and streamline the requirement gathering process.
- Utilized diagramming and prototyping tools such as MS Visio to create Wireframes, Graphical User Interface (GUI) Mockups, and interactive Prototypes to visually represent and explain the proposed

Anti Money Laundering system enhancements to stakeholders. Created Evolutionary and Throwaway prototypes to simulate and display the end-to-end user workflow of the system to stakeholders, in order to identify any potential changes in requirements early in the design process.

- Developed Use Case diagrams, Use Case Templates, Process Flow diagrams, and Data Flow diagrams using Lucid Chart tool to ensure all stakeholders have a clear understanding of the end-to-end system functionalities and workflow.

- Utilized Flowcharts and process diagrams to assist the UI/UX team in comprehending user workflows, ensuring that the designed interface met the specific needs of compliance officers and analysts, ultimately enhancing user experience.

- Participated in all Scrum Ceremonies and assisted the development team during the Review Meeting to give a Demo of the potentially shippable product increment (PSPI) to the stakeholders. Also helped PM review the DOD and Acceptance Criteria.

- Developed well-defined User Stories for the system features and functionality with the help of business and functional requirements gathered, prioritizing user stories using the 100 Pointers technique, proposing clear Acceptance Criteria for each user story, and closely collaborating with the Product Manager throughout the Agile development process.

- Managed dashboard for the project, trained development team members and project stakeholders, with AWS DevOps service tool to monitoring the workflow and activities on everyday basis using Scrum Workflow (To-Be, In Progress, Done) and Information Radiators (Burn up and burn down charts) to measure the performance during each sprint.

- Participated in Daily Standup meetings within the team and resolving issues that cause delays in the sprint completion.

- Created data mapping documents by identifying source systems, target databases, and transformation logic after coordinating across teams and understanding data flow and information requests. Identified initial sources (Cross border AML Systems and Alternate Data Sources) to migrate to unified AML System/ Platform after designing target fields.

- Ingested data from different cross border AML systems into AWS Glue which orchestrated the ETL process. AWS Glue performed transformations like cleaning, standardization, enrichment to ensure data consistency. Loaded the transformed data into AWS S3 Data Lake and AWS Neptune based on the data's nature and Central AML Systems requirements.

- Periodically updated the integrated data in Amazon S3 and made it available to the Central AML platform hosted on AWS Elastic Map Reduce. This platform facilitated all Anti Money Laundering practices and connected to the data layers via APIs.

- Created reports on Metadata, changes in the datasets, data trends for use and provided recommendations to management.

- Conducted User Acceptance Testing (UAT) and actively participated and facilitated end to end testing of the system.

- Documenting the UAT based on the scenarios created and this helped to discuss the issues/ bugs with the developing team.

- Assisted in creation of Test Cases, Test Plans, Test Scenarios, and updated Requirements Traceability Matrix. Assisted testing team in User Interface testing and documented the defects in the HP ALM, conducted API testing using POSTMAN and used HP ALM (Application Life Cycle Management) to Manage Defects, Bugs and Test Cases that can be rectified later.

- Responsible for documenting API calls from external and internal data sources using Swagger and tested the functionality of API endpoints using Postman. Delivered production support and post-production support, clarified changes to the business users, organized one on one session, one on many sessions to make sure the business users are aware of the system variations.

Environment: Agile-Scrum, Azure DevOps Service , JIRA 9.2.0 , MS Visio 2022 , Office 365 , Confluence 8.1.0 , Tableau 2022.2 , Informatica 12.2 ,SharePoint Server 2022 and SharePoint Online, Swagger 4.12.0 , Postman 10.6 , HP ALM.

Sr. Business Analyst / Scrum Master

Interactive Brokers - Chicago, IL

February 2020 to January 2022

This project focuses on enhancing Interactive Broker's trading platform. This includes introducing a Tax-Loss Harvesting system to automate tax-efficient trading strategies and incorporating Social Interaction features to boost user engagement. It also involves ensuring compliance, providing user training, and optimizing the platform's performance to deliver a comprehensive enhancement.

Roles and Responsibilities:

- Extensively worked on Equity, Fixed Income, Derivatives including Options, Mutual Fund, ETF and other financial products.
- Worked on multiple projects in the domain of Prime Brokerage Fixed Income (PBFi) and Futures & Options (F&O) Strategies.
- Supported company's risk appetite by establishing limits and daily monitored risk exposure for Capital Market counterparties.
- Developed a clear understanding of the Scope of the project followed with a thorough analysis on the list of requirements provided by the stakeholders and created Stakeholder Analysis Matrix, Specification and Configuration document.
- Assisted Product Owner in creating and determining user stories that meets Acceptance Criteria (INVEST), DOR & DOD.
- Identified business rules and elicited the requirements by conducting JAD sessions, Semi-structured & Structured Interviews, Brainstorming, Observations and collaborated in creating wireframes, prototype and mockups using the modeling software.
- Interacted with SME's, asking detailed questions and recorded the requirements and helped development team understand it.
- Conducted GAP analysis by identifying AS-IS and TO-BE process models, process models also conducted User Interface Analysis, Document analysis by referring all the previous project documents, analyzing with current project for further ideas.
- Analyzed prior documents like Business requirement document (BRD), Functional requirement document (FRD), Requirement Traceability Matrix, System requirement specification (SRS), and the organizational structure to deeply understand the project.
- Conducted multiple closed questionnaires to experts in the field and the associated stakeholders to clear doubts, conducted structured and unstructured interviews when required, used Interface analysis to understand the legacy system for application.
- Filled gap between the business and the technical team by carefully noting the requirements and making the team understand.
- Create UML diagrams including Use Case Diagram, and Sequence Diagram using MS Visio to support business process flow around entities, to make the stakeholders and UI/UX, dev teams to visualize project workflow and identifying primary actors.
- Reviewed the data model and reporting requirements for organization Reports with the Data warehouse/ETL and Reporting team. Lead Business Intelligence reports development efforts by working closely with MicroStrategy, Teradata, and ETL teams.
- Responsible for performing data analysis and data profiling on extracted data from the data warehouse for data validation.

- Coordinated with the Project manager and worked in developing Data mapping document, Data modeling and Data extraction & Integration in the data warehouse by using the Informatica Power center tool from the legacy systems.
- Used API technical documentation tool like Swagger and assisted in API testing using Postman and documented all the test logs. Documented web service APIs Bloomberg B-Pipe and Regulatory authorities using Swagger.
- Defined Acceptance Criteria for User Stories to perform User Acceptance Testing. Designed Test Cases, Test Plans, Test Scripts, and Test Scenarios to perform Functional, Performance Testing, and Regression Testing and logged down defects using JIRA.
- Analyzed the source and target definitions where the data needs to be migrated and created a Data Mapping Document to capture Source Target Mapping to ensure that all required datasets were present in the new system.
- Assisted in creating reports using Tableau by identifying the reporting standards format for both near real-time and historical data reporting purposes, used Tableau for providing graphical representation of data for the clients whenever it's required.
- Identified the need for data backup by conducting risk analysis and created the Risk Register and Risk Analysis Report.
- Communicated across company contacts and clients, internal team about the project requirements, schedules, and launches.
- Gained knowledge about compliances like the Wash Sale rule, IRS, Anti money laundering and CUSIP number of Stocks.
- Developed good understanding on Concepts on Tax loss harvesting system, Capital Gains and Capital Loss claims.

Environment: Agile-Scrum, JIRA 8.13.0, MS VISIO 2019, Office 365, Confluence 7.12.1, Tableau 10.5, Informatica 10.4, SharePoint, Swagger 3.25.0, Postman 9.9.0.

Business Analyst

IN Department of Workforce Development - Indianapolis, IN
July 2018 to February 2020

The Project is about discarding the legacy system for unemployment benefits portal. The current system works on Cobol and DOCS which is very out of date and the project was to move everything on to microservices based portals. This Portals will be available in the WEB and the Mobile formats and some concise app to be developed to help with the functionality of the mobile portals.

Roles and Responsibilities:

- Assisted the Project Manager in gathering the requirements from the stake holders and documented these requirements.
- Interacted with the business stakeholders and subject matter experts to understand the high-level requirements and scope items based on Impact analysis. Documented all the business and functional requirements in the requirements document.
- Assisted Product Manager in defining Product Vision, and Product Roadmap, Created Stakeholder Matrix, defined communication channels, and conducted market research and competitor analysis to evaluate the scope of the project.
- Assisted the Product Manager in interviewing Subject Matter Experts (SMEs) along with Key Stakeholders to get a thorough understanding of business processes & analyzed data structure and verified compliance document of the project.

- Analyzed the existing system by implementing the Gap Analysis and created the AS-IS & TO-BE documents to address the areas of improvement and enhancements to address the system capabilities and needs to reach the objectives of the project.
- Facilitated Joint Application Development (JAD) sessions to expedite and streamline the requirement gathering process.
- Created Wireframes, Graphical user interface (GUI), Mockups and Prototypes using MS Visio. Created Evolutionary and Throwaway prototypes to explain the end-to-end system to the stakeholders to find if there are any changes in requirement.
- Created Use Case diagrams, Use Case Templates, Process flow diagrams and Data Flow diagrams using Lucid Chart.
- Participated in all Scrum Ceremonies and assisted the development team during the Review Meeting to give a Demo of the potentially shippable product increment (PSPI) to the stakeholders. Also helped PM review the DOD and Acceptance Criteria.
- Helped develop MVP with features enough for initial review after product grooming, developing User Stories with the help of Requirement, prioritizing using MoSCoW, proposing Acceptance Criteria and collaborating with the Product Manager.
- Managed dashboard for the project, trained development team members and project stakeholders, with Azure DevOps service tool to monitoring the workflow and activities on everyday basis using Scrum Workflow (To-Be, In Progress, Done) and Information Radiators (Burn down charts) to measure the performance during each sprint.
- Participated in Daily Standup meetings within the team and resolving issues that cause delays in the sprint completion.
- Created Data mapping documents by identifying Sources data, Targets data, and transformation logic for tables and its columns stored in the Database after coordinating with the development team, business users, subject matter experts (SMEs), and project managers (PM), and understanding the Data Flow process and information requests in the system. Identified initial data sources to migrate to AWS Cloud after analyzing and designing target data fields as part of ETL process.
- Created reports on Metadata, changes in the datasets, data trends for use and provided recommendations to management.
- Conducted User Acceptance Testing (UAT) and actively participated and facilitated end to end testing of the system.
- Documenting the UAT based on the scenarios created and this helped to discuss the issues/ bugs with the developing team.
- Assisted in creation of Test Cases, Test Plans, Test Scenarios, and updated Requirements Traceability Matrix. Assisted testing team in UI testing and documented the defects in the HP ALM, conducted API testing using POSTMAN and used HP ALM to Manage Defects/Bugs and Test Cases that can be rectified later. Responsible for documenting API calls from external and internal data sources using Swagger and tested the functionality of API endpoints using Postman.
- Used API technical documentation tool Swagger and assisted in API testing using Postman and documented all the test logs.
- Delivered production support and post-production support, clarified changes to the business users, organized one on one session, one on many sessions to make sure the business users are aware of the system variations.

Environment: Agile-Scrum, Azure DevOps Service, MS Visio, Lucid Chart, MS Project, Office 365, Confluence 7.11, SharePoint, Tableau10.5, Postman, Swagger, HP ALM.

Sr. Business Analyst

DBS Bank - Los Angeles, CA

January 2017 to June 2018

The Scope of the project was to integrate our banking application's payment processing system of our bank system with Third party platform, the peer-to-peer (P2P) payment feature which allowed users to send real-time payments. Our bank collaborated with vendor (Zelle) that allowed our customers to use their existing contact information on their mobile device to securely transfer money or request money in real time processing.

Roles and Responsibilities:

- Worked with Business Teams and Regulatory Teams to understand the Banking Compliances such as KYC, BSA, and SAR.
- Performed Document Analysis to understand the AS-IS process and collaborated with the team to design TO-BE process.
- Worked with Subject Matter Experts (SME) and Technical PM to capture and understand the Business Requirements.
- Reviewed High - Level Requirements with Business Sponsors to define Scope and the Vision of the project.
- Performed GAP Analysis and Cost-Benefit Analysis to establish the significance of the Enhancement for the project.
- Developed High Fidelity and Low Fidelity Mock-Up's, Wireframes and Prototypes using Draw.io Tool.
- Facilitated Sprint Planning, Daily Stand-Up, Sprint Review, Sprint Retrospective, and Backlog Refinement Meetings.
- Created User Stories for the Development and Testing Teams to track the activities with the Business Scenarios.
- Worked with Product Owner to review the Working Demo of Potentially Shippable Product Increment (PSPI) in review meeting and helped deciding which features are Done according to our DOD Criteria and satisfies the acceptance criteria.
- Assisted in Designing Conceptual, Logical Models and Physical Models to capture the Entities existing in the system and the Relationship between them using E-R Diagrams, keeping in mind the Business Requirements using MS Visio.
- Created Dimensional Model and helped the architect to select from different types of dimensions and Reviewed Business Rules written for middle tier and validated XML schema for system data documentation including the requirement data document.
- Used Mapping document for ETL Process using Informatica PowerCenter to transform the data from different sources to the target Data-Mart in IBM Cognos Data Manager and Thereby Reporting, Analyzing events and Metrics.
- Created Data mapping document for the application after finalizing the attributes and tables with business users.
- Assisted in validating SQL queries using Select, Views, Joins, Unions, Outer Joins, Group By, Order by and Aggregate Functions such as Max, Min, Average to Extract data & calculate information to fulfill data & reporting requirements including identifying tables and columns from which data is extracted. Reviewed existing stored procedures, supported application developers by Tuning SQL queries for better Performance, Mobility, and Responsiveness.
- Worked with Development, QA, and Production Support teams to communicate, verify, and test the desired functionality.
- Helped the Testing team in creating Test Plans, Test Scenarios, Test Cases and ran these Test Cases using HP ALM (Application Life Cycle Manager) to check for any defects encountered and reported those

defects in JIRA and documented it in Confluence and collected Test Data for successful completion of Integration Testing and Functional Testing.

- Facilitated User Acceptance Testing with UAT cases and captured all the Feedback and Resolved Issues with the users.
- Hands on Experience with JIRA for drafting the User Stories/Sub-Tasks/Defects/Bugs and managing the requirements.
- Generated Business Intelligence Report for senior management for Decision-Making using the Tableau reporting tool.

Environment: Scrum, Draw. Io, MS Visio, Informatica PowerCenter, IBM Cognos Data Manager, MS Office (MS Word, MS Excel, MS PowerPoint, Outlook), IBM Cognos, My SQL Server, HP ALM, JIRA, and Tableau.

Business Analyst

STATE BANK OF INDIA - Hyderabad, Telangana

April 2016 to December 2016

The Project involved setting up web enabled access to customers to manage their mortgage accounts online and digital method of payments. The user had to login and then he could review his payment information, view transaction history, and make payment online.

Roles and Responsibilities:

- Conducted Interviews and Brainstorming Sessions with stakeholders to gather requirements and end user perspectives in order to identify deficiencies and areas for improvement & enhancement.
- Organized workshops with Subject Matter Experts (SMEs) to obtain domain level information. Developed a vision plan that defined the primary goals and objectives of the project. Participated actively in assembling the JAD team and in conducting the weekly sessions from requirements gathering phase to the sign-off of the application after analyzing and testing.
- Facilitated collection of functional requirements from system users and created Business Requirement documents (BRD) and Functional Requirement documents (FRD). Coordinated work plans between project manager and client using MS Project.
- Created the following types of documents mainly: Functional Test Summary, Change Control Documentation and Validation Specification. Prepared Requirement Traceability Matrix and interacted with QA team to ensure quality of software.
- Trained and mentored the team members in RUP and the Rational Suite. Created UML diagrams for the Activity Diagrams, Use Case Diagrams, and sequence diagrams to view the system from different perspectives.
- Created the Business Architecture document to provide an overview of different aspects of the application.
- Looking in ETL mappings about business rules and solving the cases. Unit Testing, Peer Review of ETL and Database code.
- Managed JIRA dashboard for the project, trained development team members and program stakeholders with JIRA tool, monitoring the workflow on daily basis using Scrum Workflow (To-Be, In Progress, Done) and Information Radiators (Burn up and burn down charts) to measure the performance during each sprint.
- Generated various dashboards and Adhoc reports using Tableau promoting business insights and trend analysis.
- Using Shared Containers and creating reusable components for local and shared use in the ETL process.
- Involved in creating the Project Closure and Decommission report while discarding legacy systems.

- Helped management to create and communicate critical information to the user community via email and discussion boards.
- Performed testing to validate margin calculation of various asset class Equity, Fixed Income, Options (Derivatives), Mutual Fund.
- Logged and tracked the defects using HP ALM and created an error repository and managed the testing process with the QA team Read about defect life cycle.

Environment: Waterfall-scrum, MS Visio, MS Project, SQL, HP-ALM, JIRA, Confluence, Power BI, Peoplesoft, Office 365, Tableau.

Junior Software Developer

ICICI - Bengaluru, Karnataka

October 2015 to March 2016

Designed and developed an Enterprise Reporting System to create and distribute reports in a heterogeneous networked environment. The system supported Portfolio Management and performance analysis for the credit card system.

Roles & Responsibilities:

- Worked on the development of a cloud-based inventory management system using Java and MySQL.
- Implemented new features like real-time stock tracking, re-order reminders, and usage analytics.
- Designed database schema and optimized queries for efficient data retrieval.
- Developed REST APIs for integration with mobile and web applications.
- Wrote unit tests to validate functionality using JUnit test framework.
- Troubleshoot issues discovered during user testing and bug fixes.
- Assisted in creation of technical documentation like API specifications, architecture diagrams, and user manuals.
- Participated in daily standups, sprint planning, and retrospectives to collaborate with the agile team.
- Completed tasks within the agreed timelines to ensure on-time delivery.
- Leveraged version control systems like Git and GitHub for source code management.
- Quick learner able to pick up new languages, frameworks, and development tools.

Environment: Java, Spring Boot, MySQL, Git, GitHub, REST APIs, Agile, JUnit

Education

Bachelor of Technology in Computer Science Engineering

Manipal University

Skills

- Analytics
- SQL

Certifications and Licenses

Certified Scrum Master
