

Syed Hakeem Abbas

hakeem.abbas.xyz@gmail.com / +16505268926 / San Ramon, CA

Summary

Senior Software Engineer with 12+ years of experience in building scalable systems using JavaScript, TypeScript, and Python. Proven expertise in integrating machine learning models and AI-driven automation into production systems with FastAPI, Python, and Azure AI. Extensive experience in building real-time systems, predictive analytics, data-driven applications, and natural language processing (NLP) using React, Node.js, and GraphQL. Collaborated with large-scale technology companies like Meta, Skype, and Microsoft, contributing to high-performance web and mobile platforms. Specialized in optimizing systems with AI capabilities, including automated decision-making, intelligent data processing, and NLP. Focused on delivering scalable, maintainable, and AI-powered solutions across the full stack.

Experience

Senior Full Stack AI Engineer

Hellogov AI • United States

09/2023 - Present

- Designed and developed AI-driven solutions using Next.js and React for customer-facing portals, optimizing workflows through predictive analytics and real-time decision-making.
- Integrated FastAPI for AI model deployment and Azure AI services to enhance backend services with automated decision-making and intelligent data processing.
- Led end-to-end feature delivery, from system architecture to cloud integration, ensuring scalability and maintainability for AI-powered applications.

Full Stack Software Engineer

INDEPENDENT CONTRACTOR • Worldwide

03/2020 - 09/2023

- Delivered AI-powered solutions for mobile and web applications using React Native, Node.js, and Ruby on Rails, with AI integration for predictive analytics and personalized recommendations. Notable projects include YogaJoint Studios and Bicycle Health.
- Developed Web3-enabled applications using Next.js and Node.js, focusing on blockchain integration for decentralized applications, staking, and governance workflows for EarthFund.
- Built backend systems with FastAPI and Python, integrating machine learning models for automation and real-time data processing, ensuring scalable and maintainable solutions across multiple client applications.

Software Engineer

Meta • United States

08/2017 - 03/2020

- Worked on real time infrastructure at scale, migrating GraphQL queries to live queries and subscriptions to improve data freshness and system responsiveness.
- Designed and executed experimentation and A/B testing to evaluate performance, reliability, and behavior of real time systems.
- Developed a C++ service client running in Facebook data centers to exercise internal services supporting high traffic News Feed workloads.
- Built cross platform mobile features for the Oculus VR Companion App using React Native, supporting user flows and device related experiences.
- Implemented Android specific integrations including VOIP stack components and HLS based media streaming, focusing on performance and stability.

Software Engineer

Microsoft / Skype • United States

10/2012 - 07/2017

- Implemented real time user presence and message synchronization features for Skype for Life mobile clients using React Native, integrated with backend services for cross device consistency.
- Built bug reporting, user feedback interfaces, and telemetry systems for Skype on Android to monitor application health and improve reliability.
- Developed Android UI components using MVP architecture with reusable fragments, custom views, and RecyclerView based layouts across multiple Android versions.
- Implemented local data storage using SQLite with RxJava for asynchronous data handling, supporting smooth UI interactions and offline scenarios.
- Built JNI based integrations between Java and C++ to enable cross platform features such as Remote Desktop name discovery for Android and iOS, and led telemetry driven bug fixes and performance improvements.

Skills

JavaScript (ES6+), TypeScript, Python, C++, Java, React.js, Next.js, React Native, HTML, CSS, Responsive UI Development, State Management (Redux, React Hooks), Node.js, NestJS, Express.js, FastAPI, Ruby on Rails, GraphQL, REST APIs, API Design, Microservices, Azure AI, FastAPI, Python, Machine Learning Integration, Predictive Analytics, Natural Language Processing (NLP), AI-driven Automation, PostgreSQL, MongoDB, SQLite, Cosmos DB, Data Modeling, Data Processing, AWS (EC2, S3, RDS), Azure, Docker, Kubernetes, PM2, GitHub Actions, CI/CD Pipelines, Code Review, Debugging, Telemetry, Monitoring, A/B Testing, Performance Optimization, Real-Time Systems, Web3, Blockchain Integration, Decentralized Applications, Smart Contracts

Relevant Projects

Hellogov AI: Built a large-scale AI-powered customer portal and backend systems using Next.js, React, Node.js, and NestJS with GraphQL APIs and PostgreSQL. Integrated Azure AI services for predictive analytics and AI-driven automation in government workflows. Focused on real-time data processing and automated decision-making for high-impact public services.

EarthFund: Developed Web3 enabled applications using Next.js and Node.js with TypeORM and PostgreSQL, supporting staking, governance, and decentralized workflows. Integrated early stage generative AI features and data driven components alongside blockchain systems using AWS serverless infrastructure.

YogaJoint: Built React Native mobile apps and a React.js web platform with Node.js backend, supporting subscriptions, ecommerce, and membership management for a fitness platform. Integrated AI features for personalized recommendations and predictive analytics to optimize the user experience.

Bicycle Health: Developed a React Native mobile app for a healthcare platform, focusing on personalized treatment workflows with AI-powered recommendations and predictive analytics. Integrated backend services for secure and efficient data processing.

Education

Software Engineering

National University of Computer and Emerging Sciences • Pakistan

12/2012
