

OBJECTIVE

IT professional with over 20 years of experience in Information Technology field looking for a full-time position as a Product Manager, Product Owner or Senior Business Analyst. With my many years of IT experience in my many different roles, I understand the full lifecycle of a project from initiation to alternative analysis to requirement gathering to development to QA to deployment and support. I'm a quick learner and can jump into any position and be able to assess process and come up with solutions to solve any issues.

PROFESSIONAL EXPERIENCE

Product Manager/Scrum Master | Kaiser Permanente

2022 - PRESENT

A scrum master, project manager and business analyst for multiple applications and programs at Kaiser Permanente. My role help implement and support clinicians and members to virtually connect with simple streamline processes and technologies. I help identify gaps and determine alternatives to improve processes and enhance functionalities.

As a business analyst and project manager, I prioritize and write up detailed features and user stories for the team to take up in each iteration. I review our features with the development team and provide clarification on the business requirements and UI design specifications. I facilitate and run the meetings with the stakeholders to share updates and propose solutions or improvement opportunities as they arise.

I install and configure applications on iPads and remote patient devices. I support our applications and troubleshoot issues that arise.

As the scrum master, I run our scrum/stand up meetings, our Storytime for upcoming features and our retrospectives. I follow-up and ensure blockers get resolved, team has the information and clarification needed to progress with their user stories and plan for releases.

Product Owner/Business Relation Manager/Senior Business Analyst | Chevron Shipping

2017 – 2021

A member of the Chevron Shipping IT organization supporting the Maritime Assurance (MA) and Offshore & Marine Terminal (O&MT) areas.

PRODUCT OWNER

- As a Product owner of a Shipping project, I quickly got up to speed on the business process and requirements to help design the new replacement application solution.
- Led the successful deployment of an initiative to replace an outdated content management application used on the vessels, where content can be updated on vessel or shore and get synced up accordingly. Designed the architecture and updated process flow.
- Project followed Agile framework, methodology. Worked in a scrum team using ADO to track and manage epics, features, user stories, bugs and more.

-
- Managed, wrote, and prioritized all user stories based on the requirements gathered. Demoed progress of development work to business and address concerns and issues appropriately.
 - Reviewed and provided feedback on architecture of application designs.

BUSINESS RELATIONSHIP MANAGER, SENIOR BUSINESS ANALYST

- Collaborated with the business to create long-term and short-term strategy roadmaps to ensure we align with the company's strategy on technology and support model.
- Collaborated closely with the business to understand their objectives, processes, and opportunities to improve and automate processes where feasible.
- Managed and led development team members, their workload, priorities, and tasks.
- Managed projects and served as primary liaison between client and multiple internal groups to clarify goals/objectives and meet deadlines.
- Supported multiple web application projects. Duties included, but not limited to:
 - Managing all production release deployments from enhancements to coordination of teams, schedule, and communications.
 - Managing enhancements and updates to supported applications for functionality, efficiencies, and compliance.
 - Identifying issues, analyzed information, and come up with solutions to problems.

Senior Business Analyst/Technical Team Lead/Technical Analyst | Chevron

2001 – 2017

Senior Business Analyst (04/2011 - 04/2017)

Member of a team that supports the hardware and software infrastructure of the company's IT environment.

- Designed, architected, and managed the project to create an application to manage and track the hardware asset replacement process of all hardware in the company.
- Collected and defined customer requirements to produce product scopes.
- Determined opportunities to improve workflow by adding and modifying processes and prioritized work for development team.
- Supported a suite of applications that manages and standardizes the company's hardware and software environments.

Technical Team Lead (04/2007 - 04/2011)

Managed and led a development team that worked on projects, enhancements and support several applications for Asset and Billing areas.

- Led a team of both BAs and developers located both onshore and offshore.
- Prioritized and provided work directions to all the team members,
- Managed and coordinated projects and tasks.
- Designed application database architecture (ERD)
- Designed process workflow of web applications along with the individual pages and user interface.
- Kept customers informed about issue resolution progress and provided updated estimated times of resolution on ongoing basis.
- Collaborated with business to understand business objectives and strategy.
- Assisted in technical support process refinement to improve customer service and support.
- Managed and planned multiple initiatives/projects simultaneously
- Created test plans and scenarios.

-
- Tested changes and updates to the applications and systems as needed to ensure deployment to production was a success.

Analyst and Developer (04/2001 - 04/2007)

Started with Chevron as a Web Developer and progressed into an Analyst role

- Designed process workflows.
- Developed and designed web applications.
- Designed database structure for web applications
- Participated in development team meetings and provided input on designs, enhancements, and timeframe estimate.
- Modified existing software systems to enhance performance and add new features.
- Conducted full lifecycle software development in multiple software environments.
- Developed in ASPX and VB .NET, HTML
- Worked with Oracle, SQL Server databases and Active Directory.
