

Yash Kosambia

New York, NY

yashkosambiag4jfm_ewu@indeedemail.com

+12018779524

Experienced Senior Business Systems Analyst with over 8 years of expertise in E-commerce, Retail, Assortment strategy, inventory management and Supply Chain domains. My focus revolves around the strategic implementation of Omni Channel tactics, Customer Segmentation, Merchandising, Digital Payments, Customer Relationship Management, and continuous improvement of business processes. Self-organized and Problem solver with experience working in intense environments and collaborating with cross-functional teams.

Professional Summary

- Expertise in E-commerce platforms of Retail, Payments, Supply Chain, Payment Gateways, Marketplace Diversification and transforming change, delivering valuable solutions by implementing business enhancement ideas and strategies.
- familiarity with dynamic pricing, promotional pricing, and pricing optimization strategies, CMS, and product content optimization. knowledge of personalization techniques used in merchandising and user centric customized experience.
- Understanding of e-commerce user experience design, usability principles, and implementing customer journey mapping.
- Implemented Industry-specific regulations, such as financial services regulations, that impact payment processing.
- Comprehensive grasp of the SDLC and proficiency in methodologies like Design Thinking, Empiricism, Lean Thinking, and cross-functional collaboration, Waterfall, Scrum, Waterfall-Scrum hybrid, LESS, and SAFe.
- In-depth knowledge of business ceremonies Project Management, Release Management, Requirement and Change Management, Risk Management, Plan Management, Defect Management using JIRA, Confluence and MS Project.
- Collaborated with legal and compliance teams to validate that the solution complies with state-specific procurement and data security regulations. understanding the precise requirements by clearly communicating with business & stake owners
- Coupled with effective communication abilities for precise requirement definition through techniques like Stakeholder Analysis, Market Analysis, GAP Analysis, AS-IS and TO-BE Analysis, Root Cause Analysis, Cost Benefit Analysis, Feasibility study, Impact analysis, documented BRD, FRD, SRS in alignment with the Requirements, Scope, and time.
- Collaborated with technical teams of architects & developers to assess the technical feasibility of proposed features and user stories. Created UML, Wireframes, Mockups, Activity, Sequence diagrams and Prototypes using LucidChart.
- Collab with SME during various stages of the development cycle, creating project deliverables such as Project Charters, Risk Documents, EVM reports, WBS, and Critical Path Analyses, documented systems for managing interactions and sharing Architectural information with third-party vendors or solution providers, taking of validation sign offs.
- Actively, involved in Scrum ceremonies, like High Level Grooming, Product Backlog Refinement, Sprint Planning, Daily Stand-Up, Sprint Review meeting and Sprint Retrospective meeting, provide

valuable assistance to Product Owners in shaping the vision and scope of the projects, including the MVP, MRF, MMF, and sprint planning activities.

- Experienced in accurately estimating backlog items through techniques such as Planning Poker, T-shirt sizing, and other proven methods, enhancing predictability and resource allocation. Proficient in crafting user stories in accordance with the INVEST criteria and establishing clear acceptance criteria in Gherkin format, fostering clarity and ensured the safety and performance of processes by testing PSPI during demos while consistently prioritizing stakeholder satisfaction.
 - Assist to establish Test cases, Breakdown of test stories and test criteria experienced in Test-Driven Development (TDD), Acceptance Test-Driven Development (ATDD), Behavior-Driven Development (BDD), and Continuous Integration of the shippable product. Implementation of Test
 - Experience working on topics like Layered pattern, SOA, Monolithic and Micro Services, VPC based architectures, client server pattern, Amazon cloud microservices Event driven pattern, and Microkernel pattern.
 - Experienced in API testing using Postman and SoapUI to check responses received is in required JSON or XML format, speed and codes also assisted tech lead in creating granulated API technical documentation using swagger.
 - Generated and interpreted agile metric reports, encompassing velocity reports, Burnup charts, cycle time reports, facilitating data-driven decision-making and continuous improvement, issue tracking along with using various addons Timesheets for time tracking using JIRA, GitLab for Continuous Integration, Cucumber for automation testing.
 - Worked to define the technical specifications for stored procedures. includes writing detailed requirements for each stored procedure, specifying the SQL queries, input parameters, validating and verification by sign off on the expected results.
 - Collaborate closely with business team members to gain a deep understanding of their data objectives, Partner with ETL
 - engineers to envision data approach workflows, formulate transformation logics, and align with business needs and requirements effectively. taken charge of implementing sequences and establishing robust data quality standards,
 - complete verification checks to ensure data integrity, maintain a comprehensive data dictionary to guarantee data consistency, enhance understanding of data elements, maintain clear documents, and facilitate seamless data mapping.
 - Delivered valuable assistance to ETL developers by clarifying requirements, addressing queries, and swiftly resolving any.
- issues that arise. Ensure ETL processes meet predefined requirements, safeguard with meticulous data backup procedures.
- Showed a strong grasp of agile metric reporting, Velocity Reports, Burnup Charts, Cycle Time reports, and other data-driven insights. Command a deep knowledge of various databases, such as Oracle, SQL, MySQL, MS Access, DB2, AWS S3, and AWS Dynamo Db, to facilitate effective data handling, creating data views and documenting data details to ensure transparency.
 - Expertise in Enterprise Data Warehousing concepts, Data Modeling, Data Integration (ETL/ELT), and Business Intelligence, Exhibit mastery in Dimensional Data Modeling, Data Quality, Data Mapping, Data Profiling, and comprehensive evaluations of data completeness, by ensuring data cleansing, labelling, pseudonymization and removing redundancies in the datasets.
 - Accomplished in working with Cloud based environments and it's applications like AWS - Kinesis, EKS, API Gateway, IAM, Cognito, SNS, MSK (Managed Service Kafka), Redshift, Dynamo DB, and Microsoft AZURE - Synapse, Data Factory, Cosmos DB, Databricks, Key Vault, SQL Server, Event hubs, Salesforce, and SAP.

- Detailed knowledge on managing, conducting different user acceptance tests like User acceptance tests (UAT), Operational Acceptance tests (OAT) collaborating with appropriate teams, record feedback in MS Word for bugs and changes.
- Exhibited mastery in data visualization tools, including Tableau, Power BI, and AWS QuickSight, to create compelling analytical and visual reports, that align business requirements in terms of Key Performance Indicator (KPI) dashboards.

Work Experience

Senior Business Analyst

Walgreens - Deerfield, IL

March 2022 to Present

Description:

Comprehensive omni-channel retail eco system that seamlessly merges physical and digital channels to create a personalized shopping experience. Key components include enhancing inventory and order management, implementing customer segmentation models for customized promotions, and utilizing location-based technologies to bridge online and in-store interactions.

Roles and Responsibilities:

- Spearheaded the development of an integrated inventory control system at Walgreens, leveraging tools such as JIRA and Tableau, to provide real-time inventory visibility across physical and digital channels. Orchestrated cross-functional collaboration through meetings and discussions to define program specifications and intricate process models.
- Drive the formulation of critical project artifacts, including comprehensive SRS, BRD, FRD, and an intricately detailed project management plan. conducted Impact Analysis to gain a deeper understanding of the AS-IS and TO-BE of the system, ensuring unwavering alignment with scope, time, and cost constraints.
- Employed elicitation techniques such as Stakeholder interviews, crafted questionnaires, dynamic requirement workshops, astute document analysis, and highly collaborative JAD sessions to harvest and distill client requirements.
- Track velocity and use burn-down charts to forecast release timing in tools like JIRA. RACI matrix to track stakeholders.
- Created Mock-ups, Wireframes, providing a compelling graphical representation of the UI that demos Omni channel experience breakdown, while concurrently devising intricate UML Diagrams, Sequence, Activity, Use Case Diagrams.
- Conduct in-depth RFM analysis, expertly employing R programming language to craft intricate customer segmentation strategies aimed at sophisticated customer retention, Identified Pain points in Customer's Behavior.
- Collaborated closely with the Product Owner to assist in prioritizing Product Backlog Items using MoSCoW analysis and employing vertical slicing methodology to break down epics into granular user stories.
- Collaborated in JIRA with Scrum Master to architect product roadmaps and transmute the product vision into tangible epics, features, user stories, and granular tasks, ensuring alignment with the principles of the SAFe.
- Assist QA team to craft comprehensive Test Plans, Test Cases, and Test scenarios. Leverage Cucumber for BDD tests.

- Include execution of Cucumber tests in definition of done for each user story, evaluate test automation coverage and expand for critical user journeys, review Cucumber reports and metrics on scenario pass rate.
 - Implemented comprehensive end-to-end testing procedures, in strict compliance with the Agile Release Trains (ARTs), and CI/CD Pipelines. This commitment to testing excellence was applied to individual Scrum projects. Tools such as Jenkins and Docker were employed within the pipeline to facilitate automated testing and continuous delivery.
 - Maintained an agile-centric JIRA environment for logging and managing impediments, facilitating communication across multifunctional teams, deploy Agile practices amongst cross functional groups.
 - Conducted in-depth testing of REST API Endpoints, utilizing POSTMAN for meticulous testing POST/ PUT/ GET/ DELETE, systematically documenting JSON / XML responses with Swagger, and tracking error codes for expedited resolution, simultaneously documenting it with appropriate descriptions.
 - Participated and been part of the Testing methods and methodologies of STLC like Black Box, Manual testing, System, Performance, Load, Stress, Regression, Automated, UAT, Smoke and Sanity testing.
 - Assisted PO/PM in Development of release plans and roadmaps, rollback plans in tools like JIRA, Trello, Excel.
 - Mapped data fields between legacy and new databases using tools like SQL Server Integration Services (SSIS)
 - Defined data validation rules and integrity checks for migration process, followed trickle procedure and taken data backups ensuring thorough migration strategy and effective communication plan for rollback.
 - Develop test cases to verify completeness and accuracy of migrated data, Specify data normalization, parsing, and quality.
 - Define metrics and KPIs to track ecommerce performance such as conversion rates, churn, LTV.
- Environment: SAFe, AWS Services - AWS DynamoDB, Amazon Pinpoint, Amazon Lex, AWS S3, CloudFront, AWS Amplify, Figma, Swagger, Cucumber, Jira, Confluence, Tableau

Senior Business Analyst

ZARA - New York, NY

September 2019 to August 2021

Description:

The Zara Salesforce Upgradation Project aims to revolutionize operations through Salesforce Lightning, Sales Cloud, and Service Cloud implementation. Automated processes in order management, inventory tracking, and customer support will optimize workflows. The project prioritizes leveraging Salesforce's full potential for innovation, ensuring Zara's continued tech leadership in retail.

- Roles and Responsibilities:
- Collaborate with stakeholders to understand business objectives and gather detailed requirements for Salesforce Lightning, Sales Cloud, and Service Cloud implementation. utilize tools such as Jira or Trello for efficient requirement tracking and project management.
- Work with business leaders to prioritize requirements based on their impact on key business objectives. Facilitate discussions to ensure that the most critical business needs, Scope, Budget, Time are addressed first.
- Effectively written and managed BRD, FRD, SRS to document various objectives into readable deliverables.
- Created detailed process maps and documentation to illustrate current and future state workflows for order management, inventory tracking, and customer support. Tools such as Lucidchart are used for process mapping.
- Created UML, Wireframes, use case diagrams and broken them into User stories but interacting with technical teams.

- Work closely with Salesforce administrators to configure the Sales Cloud and Service Cloud according to business requirements. Utilize Salesforce Setup menu and tools like Salesforce Workbench for configuration tasks.
 - Collaborate with Data analysts to plan and execute data migration strategies, ensuring seamless transition and data integrity, using tools like MuleSoft may be employed for data migration tasks.
 - Design and document automated processes for order management, inventory tracking, and customer support using Salesforce Process Builder and Flow, leverage Salesforce Lightning App Builder for custom app development if needed.
 - Develop training materials and conduct training sessions for end-users on Salesforce Lightning, Sales Cloud, and Service Cloud features. used tools like Salesforce Trailhead for creating interactive training modules.
 - Developed test plans, conduct testing, and ensured the quality of Salesforce configurations and custom developments. tools such as Selenium employed for automated testing.
 - Collaborate with integration specialists to ensure seamless integration between Salesforce and other systems within Zara's tech ecosystem. Using Informatica for integration tasks.
 - Implement monitoring solutions to track the performance of Salesforce instances and identify areas for optimization, utilize Salesforce Inspector for performance analysis. Monitor and optimize the performance of ERP-related reports within Salesforce.
 - Collaborate with Salesforce and ERP specialists to fine-tune report queries and improve overall reporting efficiency.
 - Maintain documentation specific to ERP reporting configurations, data mappings, and transformation processes. used collaboration tools like Confluence and SharePoint for centralized documentation and knowledge sharing.
 - Communicate project progress, updates, and potential issues to business stakeholders, use tools like Salesforce Chatter, email updates, and regular meetings to keep stakeholders informed.
- Environment: Confluence, Jira, Lucidchart, Figma, Swagger, AWS services, Cucumber, Selenium, Tableau, AWS EC2, AWS RDS, AWS DynamoDB, AWS S3, AWS API Gateway.

Business Analyst

NJSTART - Trenton, NJ

December 2017 to September 2019

Description:

The goal of this initiative is to implement an Online Procurement and Supplier Management solution to optimize government acquisition practices and relationships by configuring an intuitive e-Procurement platform to digitize end-to-end purchasing workflows, creating a centralized supplier registry to streamline vendor management, enhancing oversight with audit trails and dashboards, driving user adoption through training and support, integrating systems and instituting data security controls, and tracking KPIs

Roles and responsibilities:

- Collaborated with stakeholders from leadership, procurement, and technology teams to elicit high-level project requirements. used interviews, workshops, and document analysis to gather initial insights into business needs.
- Assisted in the creation of a Project Charter in collaboration with the project team, documented outlines the project's objectives, scope, stakeholders, and initial resource allocation. worked with stakeholders to gather and document detailed functional and non-functional requirements for the e-Procurement platform and centralized supplier registry.

- Document findings in a BRD using Confluence. covered functional, non-functional, and transition requirements. conducted cost-benefit and ROI analysis to build business case and used financial modeling tools to access metrics.
 - Assist in Defining DOR and DOD by analyzing all the related dependencies are met.
 - Apply to businesses and government agencies operating within its jurisdiction. Familiarized with the specific provisions of the New Jersey Privacy Act.
 - Comply with HIPAA regulations, particularly when handling health-related customer data.
 - Identify and collect data sources related to procurement processes, such as supplier information, product catalogs, pricing data, and purchase history, collaborate with data engineers and data scientists to define data transformation requirements to prepare raw data for analysis.
 - Create data mapping documents to understand how data flows within the procurement system.
 - Ensure data is cleansed, transformed, and integrated from various sources into a unified format using Talend.
 - Define and execute test cases to ensure that data-related functionalities and reports are accurate and meet business requirements. communicate effectively with technical teams, such as developers, data engineers, and database administrators, to convey data-related requirements and document them to maintain transparency.
 - Support change management efforts by helping stakeholders adapt to new e-procurement processes and systems through training, workshops, User Guides with instructions and thorough documentation.
 - Implemented SQL with databases for data extraction and manipulation. used data integration tools like Informatica, Talend, or custom ETL (Extract, Transform, Load) processes to handle data transformations.
 - Define the key performance indicators (KPIs) and metrics that are relevant to the project. These may include cost savings, procurement cycle times, supplier performance, and contract compliance.
 - APIs are often used to connect the E-procurement system with other systems, such as supplier databases, payment gateways, or inventory management. Ensure that data flows smoothly through these integrations.
 - Verify that APIs are secure by conducting security assessments, such as penetration testing, to identify and mitigate vulnerabilities, critical for real-time procurement processes.
 - Maintain records of API testing results, including any issues, bugs, areas of improvement identified during the testing process.
 - As the E-procurement system evolves, conduct regression testing, ensure that changes or updates do not introduce new issues.
 - Assist in Test Cases, Test Stories, Maintain RTM, document Happy path using TESTRAIL and conduct In-house UAT.
 - Used data visualization techniques to present complex data in a simple and understandable manner. Tools like Power BI, Tableau, or Excel charts can be used to create visual reports.
 - Implement data validation and data quality checks to ensure that the data in reports is accurate and reliable.
 - Used reports to track the project's performance, resilience and security against established goals and objectives, providing insights for course corrections if necessary.
 - Real-time, periodic (daily, weekly, monthly), or ad-hoc reporting. Real-time reporting is essential for monitoring critical procurement processes.
- Environment: Confluence, Jira, Lucidchart, Figma, Swagger, AWS services, Cucumber, Selenium, Tableau, AWS EC2, AWS RDS, AWS DynamoDB, AWS S3, AWS API Gateway.

Product Owner/ Business Analyst

HealthKart - Mumbai, MAHARASHTRA, IN

June 2016 to November 2017

India

Description:

The project's scope encompasses the optimization of inventory management and pricing analytics for improved operational efficiency. This involves the establishment of a dedicated database tailored exclusively for inventory and pricing information. Concurrently, the project addresses the seamless migration of data from the existing database to ensure data integrity and accuracy. The core business objectives revolve around refining inventory management practices and enhancing pricing analytics, ultimately fostering more efficient and competitive business operations.

Roles and Responsibilities:

- Developed an in-house application system that follows three-tier architecture with a Waterfall-Hybrid environment.
- Conducted a feasibility study, cost-benefit analysis, and SWOT analysis to assess the project's necessity, practicality, costs, gaps, and feasibility for improving inventory management and pricing. employed elicitation techniques such as interviews, document analysis, questionnaires, and brainstorming with SMEs, customers, stakeholders to gather requirements.
- Assisted the Product Owner in creating Project Deliverables, including the Project Charter, Risk Document, Earned Value Management (EVM), and Work Breakdown Structure (WBS). collaborated with the Mobile application team to create wireframes, mockups, and process flow diagrams to ensure the website's compatibility with mobile platforms with FIGMA.
- Contributed to the creation of documents like SRS, BRD, FRD, and the project management plan. handled change requests, conducted impact analysis, and presented reports for approval to the change approval committee.
- Designed conceptual and logical database entity structures, entity-relationship (ER) diagrams, and data mapping documents.
- Implement Git, Subversion (SVN) for version control systems to manage changes to documentation, SQL scripts, and other project artifacts, prevent redundancies in codes by using code reviews on git.
- Develop data flow diagrams to illustrate how data moves within and between systems, highlighting key touchpoints for inventory and pricing data, using LUCIDCHART.
- collaborated with Data Architects using Informatica PowerCenter for data mapping and transformation, ensuring smooth operations and data migration. tested REST API endpoints using Postman, documented JSON responses using Swagger, and managed error codes.
- Implemented ETL transformations, aggregate functions, SQL operations, stored procedures, and views to extract and manipulate data. developed test plans, test cases, and test scenarios, conducting Black Box and Regression testing to ensure the application's functionality and performance met requirements.
- Tracked UAT issues, managed bugs, and created a Requirements Traceability Matrix (RTM) using HP Quality Centre (HP QC) for test case verification and validation. Documentation using SharePoint, analyzed data, and created Business Intelligence Reports using visualization tools like Power BI.
- Collaborated with data engineers and data architects to define data mapping and transformation rules, documented these rules with Informatica making sure that the rules imply business logic.
- Develop a data migration plan, including timelines, resource requirements, and dependencies.
- Understand and manage API versioning, as changes to APIs can impact integrations and data flow.
- Checked the data validation and verification mechanisms within APIs to prevent incorrect/malicious data from being processed, documented validation benchmarks, and achieved them.
- Develop customized inventory reports that focus on these KPIs, providing real-time insights into inventory health and helping procurement officers make data-driven decisions.

- Include data on supplier lead times in reports to manage inventory levels based on how quickly suppliers can deliver goods.
- Report on the frequency and results of cyclic (cycle) counts to ensure the accuracy of inventory levels using TABLEAU.
- Document technical specifications, data models, and database schema to provide a reference for IT and technical teams.

Environment: Confluence, Jira, Lucidchart, Figma, Swagger, AWS services, Cucumber, Selenium, Tableau, AWS EC2, AWS RDS, AWS DynamoDB, AWS S3, AWS API Gateway.

Business Analyst

Lenskart - Mumbai, MAHARASHTRA, IN

September 2015 to May 2016

India

Description:

Over the past 3 years, Lenskart undertook major expansions in geographic and product reach, strengthened its D2C and tech capabilities, and forged strategic partnerships to become the leading online eyewear retailer in India. Key moves included expanding its offline footprint to over 750 stores, doubling its SKUs through private labels and licensing deals, acquiring manufacturing and AI capabilities, launching virtual try-on and recommendation tools, and partnering for logistics.

Roles and Responsibilities:

- Played a pivotal role as a Senior Business Systems Analyst, focusing on optimizing the supply chain management processes to support Lenskart's strategic expansion initiatives. Collaborated with cross-functional teams to conceptualize and develop an end-to-end solution aimed at streamlining the returns processing and warranty dispositioning system within the supply chain.
- Spearheaded the ideation and development of a web-based application, leveraging JavaScript and the Angular framework, complemented by HTML and CSS, to enhance operational efficiency.
- Orchestrated requirement elicitation sessions, including Requirement Workshops, Focus Groups, Interviews, and Surveys, in collaboration with inventory managers, Subject Matter Experts (SMEs), and other stakeholders.
- Employed advanced analytical techniques, such as SWOT Analysis and Fishbone diagrams, to conduct gap analyses, identifying opportunities for architectural enhancements and process optimization.
- Brainstorming sessions, proposing innovative business improvement ideas, including recommendations for similar items, search re-ranking based on user preferences, and personalized product recommendations based on user interactions.
- Assisted in the creation of comprehensive documentation, including SRS, BRD, and FRD, while also actively participating in project management planning. Coordinated managed the end-to-end release process, ensuring the seamless and timely deployment of software updates and enhancements across multiple environments.
- Collaborated closely with development teams, product owners, and stakeholders to define release requirements, establish scope, and develop well-structured release plans.
- Participated in Product Vision meetings to strategize the data migration plan, orchestrating the seamless transition from Cassandra Database to AWS DynamoDB Database through AWS migration services and tools.
- Created comprehensive Data Dictionaries and Data Mapping Documents, facilitating a deeper understanding of data requirements and relationships. Conducted rigorous data analysis, leveraging

Python, to clean, profile, and enhance data quality, while effectively eliminating redundancies and dependencies.

- Entity-Relationship (ER) diagrams and Walking Skeletons using Figma to create conceptual models and MVPs, led code review sessions with development teams, ensuring adherence to project requirements.
- Leveraged Postman and Swagger to rigorously test and document REST API operations (GET, PUT, POST, DELETE) across Production and Development environments, meticulously monitoring response times and error codes.
- Executed complex data operations, including transformation rules, aggregate functions, SELECT, WHERE, and JOIN operations, and effectively employed stored procedures and views to extract data from diverse data sources.
- Orchestrated comprehensive test case scenarios for UAT, meticulously documenting Test Plans, Test Scenarios, Test Scripts, Test Reports, and RTM using Cucumber. maintained agile boards using JIRA, documented issues using Confluence.
- Designed compelling, interactive dashboards utilizing Tableau, effectively presenting key metric reports, including Velocity Reports, Burnup Charts, Lead Time Reports, Cycle Time Reports, WIP Reports, Cumulative Flow Diagrams, Control Charts, Burndown Charts, Control Charts, and Impediments lists.

Environment: Waterfall, MySQL, JIRA, SharePoint 2016, Oracle Cloud OMS, MS Project, MS Visio, Balsamiq, Postman.

Education

Bachelor's degree in engineering

Mumbai University
