EDUCATION

NEW YORK UNIVERSITY, Courant Institute of Mathematical Sciences, New York, NY Dec 2022
Master of Science in Computer Science

VNR Vignana Jyothi Institute of Engineering and Technology, Hyderabad, India May 2017
Bachelor of Technology in Electronics and Instrumentation Engineering

SKILLS

Languages : C, Java, SQL, Python
Web Technologies : HTML5, CSS, JavaScript, jQuery, Angular, Bootstrap, Servlets, JSP, SOAP, REST WebServices
Java/J2EE Frameworks : Service Component Architecture SCA, Hibernate, Spring, Spring Boot, Struts 1.3, MVC, Spring cloud
Containers : Docker, Kubernetes, Openshift
IDE & Tools : Tableau, Eclipse, IntelliJ, Notepad++, Visual Studio, star UML, Maven, Jenkins, JIRA,
Databases & Servers : Oracle, PostgreSQL, MySQL, Apache Tomcat, JBOSS, Glassfish
Version Control : GIT, SVN, Bitbucket
Methodologies : Agile, Waterfall, TDD
Big Data Ecosystems : Hadoop, MapReduce, HDFS, HBase, Zookeeper, Hive, Spark

EXPERIENCE

Software Developer, **CAPGEMINI**, Bangalore, India July 2017 – Jan 2021

Supplier Warranty System (SWS)

- Developed and deployed a highly scalable and cost-effective web application using Java and Spring MVC framework, which reduced the client's warranty costs by 25% and increased recourse volume by 20%.
- Integrated the ORM Object Relational Mapping tool using Spring ORM and Spring transaction API for efficient database transactions, resulting in a 15% reduction in application response time.
- Experience in java8 features like Parallel Streams, Lambdas, functional interfaces, and filters.
- Created a data dictionary in Oracle with SMEs, improving data accuracy and reducing data-related errors by 30%.
- Documented technical workflows and knowledge for newly hired employees, reducing onboarding time by 50%.

Parts Logistics System (PL)

- Participated in agile development of project timelines, system flow diagrams, documentation, testing, and ongoing support of systems.
- Designed and developed an Angular7-based application, PL, with Apache Kafka for communication between Microservices, resulting in a 40% improvement in order processing time.
- Implemented Kafka to provide a unified, high-throughput, low-latency platform for handling real-time data feeds.
- Automated environment build using OpenShift, Docker containers, and Kubernetes Clusters, saving up to 100 hours of manual deployment time per year.
- Setup and maintained Logging and Monitoring subsystems using tools like Prometheus, Grafana and Alertmanager that resulting in saving up to 35 debugging hours a month.

Retail Information Exchange (RIX)

- Worked on an application that analyzes customer order history and generates intelligent configurations based on an internal algorithm.
- Extracted and analyzed customer data using SQL queries, implemented reports and dashboards in Tableau, reducing data processing time by 20%.

ACADEMIC PROJECTS

Product recommendation system (<https://github.com/nyu-summer2022-devops/recommendations>)

Created Python based API (RESTful Web Services) to recommend products based on what other customers have purchased using Flask, PostgreSQL.

Built an automated CI/CD DevOps pipeline to deploy the service to IBM Cloud, reducing deployment time by 80%.

Movies Analysis for Recommendation Systems – Apache Spark, PySpark, Spark NLP

Processed and investigated movie data (40 million rows) to gain in-sights on user reception for various movies, proposed new derived metrics which can be used to build or improve movie recommendation systems

Prediction of pollutant levels – Hadoop, MapReduce, Hive, Java, Tableau

Examined air pollution data to predict the pollutant levels in the different parts of the country.

Compared CUDA and OpenMP for GPU friendly applications (https://github.com/hyejin97/GPU_programming_openmp-cuda)

Reviewed different aspects of OpenMP and CUDA on various applications such as BFS, matrix multiplication, and sorting.
