- 8+ years of experience as Business Analyst with proven ability to work with self-organizing, cross-functional teams in finance domain and SDLC Software development Life Cycle methodologies including analysis, design, development, testing & deployment of software.
- Expert in Business Process Management, Business Process Modeling, Business Analysis, System Analysis and System Architecture.
- Extensive Knowledge in Wealth Management, Wealth management life cycle, Capital Markets, Trade life cycle, Risk Management, KYC, Investment Banking, Financial Statement Analysis, Equity, Fixed Income, Alternative Investments, Derivatives, M&A, IPO etc.
- killed in regulatory acts and compliances like Bank Secrecy Act, Dodd Frank Act, Securities and Exchange Commission (SEC), Know your Customer (KYC), Customer Due Diligence (CDD), General Data Protection Regulation (GDPR), BASEL III, Sarbanes Oxley ACT.
- Experienced in different Software Development Life Cycle (SDLC) approaches, which include Waterfall, Spiral Model, Extreme Programming, and the Agile framework including Scrum, Kanban, Scrumban, LeSS and Scaled Agile Framework (SAFe).
- Proficient in carrying out thorough assessments and analysis of business processes using techniques such as stakeholder analysis, GAP analysis, risk analysis, impact analysis, cost-benefit analysis, as-is analysis and to-be analysis, root cause analysis, SWOT analysis, MOST analysis, competitor analysis, ROI analysis, budgeting and forecasting, requirement analysis and feasibility studies.
- Proficient in requirement elicitation techniques like survey/questionnaires, interviews, brainstorming and focus group sessions, requirement workshops, interface analysis and document analysis, and Joint Application Development (JAD) sessions.
- Skilled in drafting essential business artifacts such as Business Requirement Document (BRD), Functional Specification Document (FSD), Requirements Traceability Matrix (RTM), System Requirement Specification (SRS), Risk Register, Data Flow models, change request document, project charter, project development roadmap, Readiness document, and work breakdown structure.
- Competent in creating static and dynamic Unified Modeling Language (UML) diagrams. Proficient in using tools like MS Visio, Figma and Lucidcharts. Able to create low-fidelity and high-fidelity mockups and wireframes using Balsamiq to assist the teams.
- Extensively involved in Scrum ceremonies, high-level backlog grooming and low-level backlog grooming, release planning, sprint planning, daily standups, sprint review meetings, sprint retrospective meetings, and SAFe ceremonies like Product Increment planning, inspect and adapt, PO Sync and ART Sync and scrum of scrums meetings. Proficient in maintaining scrum artifacts such as sprint backlogs, product backlogs, product increment, velocity & capacity charts, Sprint burnup charts and burndown charts.
- Solid experience building user stories that match the INVEST criteria. Created acceptance criteria, definition of done and definition of ready for the user stories while taking SMART criteria into account and in coordination with product owners, and the scrum team.

- Skilled in prioritizing and estimation techniques like MoSCoW, KANO, 100-point method, Dot voting, and value stream mapping, Affinity Mapping, Planning Poker, Relative mass valuation, T-shirt sizing. Proficient in performing horizontal slicing and vertical slicing on epics to decompose them into user stories for feature-based teams, component-based teams & cross functional teams.
- Assisted product owners in defining project scope, product vision, objectives, user stories, Minimum Viable Product (MVP), Minimum Releasable Feature (MRF), Minimum Marketable Feature (MMF), defining Key Performance Indicators (KPI).
- Possess an extensive and profound knowledge base when it comes to implementing databases and designing data warehouses, with an understanding of data warehouse schemas and operational data stores (ODS). Proficiently skilled in executing Extract, Transform, Load (ETL) or Extract, Load, transform (ELT) processes, employing an array of processing tools, including those for Online Transaction Processing (OLTP) and Online Analytical Processing (OLAP). OLAP cube operations like roll up, slice, dice, pivot and, drill down.
- Hands-on experience in writing SQL queries, data evaluation, manipulation, and verification like select, having, joins, & unions. Skilled in different types of Data Definition Language (DDL), Data Manipulation Language (DML), and Data Control Language (DCL) for data analysis, transformation verification, and test case execution using MySQL, PLSQL, Azure SQL, MS SQL, Postgres SQL databases.
- Experienced in performing API testing using tools like Postman, SoapUI, and Swagger. Proficient in Simple Object Access Protocol (SOAP) and Representational State Transfer (REST) in XML and JSON and their documentation using Swagger. Skilled in performing CRUD operations (GET, PUT, POST, DELETE and PATCH) their status codes (1xx, 2xx, 3xx, 4xx, 5xx), request, and response times.
- Experienced in various types of testing including White box, Grey box, Black Box, Manual, Unit, System, Performance, Load, Stress, Regression, Automated, Functional, Non-Functional and User Acceptance Testing (UAT). Knowledgeable about Software Testing Lifecycle (STLC) and proficient in creating test plans, test scripts, test cases, test scenarios, test analysis reports, bug logs.
- Familiarized with JIRA as a Project Management and issue tracking tool, gaining proficiency in its versatile capabilities. Utilized various addons like Tempo Timesheets for time tracking, Jenkins and GitHub for Continuous Integration, Cucumber for automation testing.
- Expertise in BI tools like LEAD BI, Tableau, Power BI to visualize business statistics, create analytical dashboards, heat maps, pie charts, Gantt charts, area charts, bar graphs, tree maps, ad hoc reports, live and extract and other forms of reporting methods.
- Extensive knowledge of continuous integration and continuous deployment with Jenkins and development techniques like Test Driven Development (TDD), Behavior Driven Development (BDD), and Acceptance Test Driven Development (ATDD).

Work Experience

Sr Business Analyst

UBS - New York, NY

December 2021 to Present

The objective of project focused on infusing technology into wealth management platform, elevating client experiences through personalized investment advice and optimized portfolio management. The goal was to leverage Salesforce CRM, AWS services, and Snowflake data warehousing to enable data-driven decision-making and revolutionize the delivery of financial services.

Roles and Responsibilities:

- Developed good understanding on Wealth management life cycle, Investment

Instruments, Asset allocation and Financial Ratios.

- Worked collaboratively with Business Stakeholders, Subject Matter Experts to gather functional, non-functional, business, data requirements and crucial Machine learning Use Cases and chart a comprehensive roadmap for platform enhancement.

- Collaborated with finance teams to gather FP&A requirements, ensuring alignment with financial strategies and financial policies.

- Led efforts to ensure comprehensive compliance with both SEC (Securities and Exchange Commission) regulations, which govern financial operations, and GDPR (General Data Protection Regulation) regulations, which governs data privacy and protection.

- Collaborated closely with legal teams and regulatory teams to interpret and implement evolving compliance requirements.

- Performed analysis such as Gap analysis, Root cause analysis, risk analysis, As-is & To-be analysis, SWOT analysis, and feasibility study.

- Played a key role in establishing measurable Key Performance Indicators to gauge the effectiveness of AI-driven investment insights.

- Organized smooth teamwork between Data Scientists, developers, and Business Intelligence Analysts to pinpoint important data sources. maintained and kept track of Requirement Traceability Matrix (RTM) to ensure all the Functional requirements are addressed at the use case and created Business Process Model and Notation (BPMN) Diagram and UML diagrams and documented it.

- Created detailed workflow diagrams, flowcharts, and activity diagrams using MS Visio, providing visual clarity to data pipelines.

- Collaborated with finance expert teams to perform budget analysis and ROI projections for AI/Machine Learning implementations.

- Contributed to breaking down Epics into User Stories using the vertical slicing method. Helped estimate the User Stories using the Planning Poker game in the Sprint Planning meeting and the Backlog Grooming meeting efficiently on a regular basis. Assisted Product Owner in the prioritization of Product Backlog Items by applying techniques such as the MoSCoW and KANO techniques.

- Performed capacity or velocity planning, as necessary. Developed sprint and product burnup and burndown charts to track development. And helped negotiate commitments and assured understanding of requirements and deliverables amongst stakeholders in Sprint Planning Meetings, Daily Stand-ups, Sprint Review meetings and Sprint Retrospective meetings (Scrum Ceremonies).

- Helped the development team in collecting, processing, and analyzing real time data using Amazon Kinesis Data Streams and cleaned, transformed the data with

Amazon Glue which was streamed to AWS SageMaker for real-time predictive analysis.

We stored the above data in Snowflake Datawarehouse, and we stored the structured data from the AWS SageMaker in the Amazon RDS.

- Collaborated with Data analyst to apply a variety of machine learning algorithms, such as ARIMA, LSTM, Mean-Variance Optimization, Black-Litterman model, Regression analysis, Collaborative & Content based filtering, and NLP to enhance investment strategies.

- Created a flexible plan to smoothly blend Salesforce CRM data with external sources, ensuring information flows seamlessly.
- Oversaw the implementation of a scalable AWS infrastructure, utilizing Lambda functions, SageMaker, RDS and S3 for data processing.
- Ensured that AI/Machine Learning models and data processing workflows adhere to financial regulations and compliance standards.
- Collaborated with cross-functional teams to define stringent Acceptance Criteria, ensuring successful Product Increment delivery.
- Created API Documentation using Swagger for development team. Used Amazon API Gateway to connect Cloud data. Used content like Authentication, Using-guides, Endpoints, example request, and response for creating API document. I conducted tests on the CRUD operations (GET, PUT, POST, DELETE and Patch), HTTPS to ensure that they performed as expected. I tested these operations in both production and development environments to identify any discrepancies that may occur in different environments.
- Developed SQL queries using joins, unions, group by, order by, aggregate, having, like, in functions to extract data to manipulate and calculate information using Amazon RDS Database to fulfill data needs and identified tables from which data is being extracted and reviewed existing Stored procedures, Views, supported application developers by tuning SQL queries for better performance.
- Assisted in documenting Test plans, Test Scenarios, Test Cases, and Requirement Traceability matrix & collaborated in Functional testing, Smoke Testing, and User Acceptance Testing (UAT) to find out and manage defects faced during the Software testing lifecycle.
- Designed interactive Tableau dashboards, providing intuitive visualizations of portfolio performance and investment opportunities.
- Presented critical insights and actionable findings to senior management, shaping strategic investment decisions.

Environment:

- Agile (Scrum), JIRA 8.21, HP ALM 5.0, SQL, Python, AWS (Lambda, SageMaker, S3, Pipeline, RDS, API Gateway), Snowflake, Tableau 2022.4, MS Visio, Salesforce CRM, Swagger 4.0, Confluence 7.19.

Sr Business Analyst

Citi Bank - New York, NY
August 2019 to July 2021

The project aims to enhance the efficiency and accuracy of the trade life cycle across the front, middle, and back offices of a Citi bank. The goal is to optimize trade execution, processing, risk management, and settlement processes by implementing a comprehensive solution that aligns with industry best practices and regulatory requirements.

Roles and Responsibilities:

- Developed good understanding on entire trade life cycle, trade reconciliation, and front, middle, and back office operations.
- Collaborated with Business stakeholders and Domain experts across front office, middle office, and back office to understand the current trade life cycle processes, pain points, and areas of improvement and documented that information using confluence.
- Facilitating JAD sessions with trading teams, risk management, operations, and IT teams to gather comprehensive requirements.
- I ensured compliance with BASEL III and Dodd-Frank Act, collaborating closely with compliance experts and legal teams. This included assessing our practices and formulating compliance strategies. Our efforts enhanced risk management and regulatory compliance.

- Analyzed and documented the end-to-end trade life cycle processes, identifying gaps, redundancies, and areas for automation.
- Created detailed specification document, BPMNs and use cases that capture the requirements for each phase of the trade life cycle.
- Collaborated with developers, architects, and solution designers to translate business requirements into technical specifications.
- Worked closely with risk management teams to define risk assessment and mitigation strategies, ensuring compliance with regulatory guidelines using Google Cloud Security and Google Compliance tools, including Google IAM and Google Security Command Center.
- Collaborated with operations teams to define efficient settlement processes and automating reconciliation procedures.
- Assisted in defining key performance indicators (KPIs) to measure the success of the streamlined trade life cycle processes.
- Created workflow diagrams, process flowcharts, Prototypes, Mockups, Activity, and sequence diagrams to visualize the trade life cycle and system interactions using Lucidcharts and Business Process Modelling and Notation (BPMN) diagrams using Balsamiq.
- Participated in scrum ceremonies, including sprint planning, backlog grooming, and sprint reviews, to ensure alignment with project goals. Assisted the Product Owner in maintaining the Product Backlog, dependencies and User Story Mapping and Helped the Product owner to do vertical slicing on the epics and used Jira to draft the User Stories and to maintain the Product Backlog
- Collaborated with Data architects to design the data warehousing schema and ensured data is loaded into GoogleBigQuery for analysis.
- Created Data Mapping Documents for data mapping operations with help of business for defining data flow between data source and target. Used Informatica as ETL (Extract, Transform and Load) & ELT (Extract load & transform) tool in the migration process.
- Tested REST API using CRUD Operations, response times and error codes. Assisted development team in API testing using Postman to check API interacts with data in JSON, XML format using REST standards and documented using SWAGGER as a tool.
- Developed SQL queries using joins, unions, group by, order by, aggregate functions to extract data to manipulate and calculate information using Google cloud SQL Database to fulfill data needs and identified tables from which data is being extracted.
- Assisted in User Acceptance Testing (UAT) and regression testing by defining test scenarios, test cases, and acceptance criteria.
- Utilized Google Data studio to generate comprehensive reports, analytics and created intuitive dashboards for trade life cycle.
- Conducted training sessions for end-users across the front, middle, and back offices to ensure smooth adoption of the new processes and systems. Monitored post-implementation performance and gathering feedback from users to identify continuous improvement opportunities.

Environment:

· Agile-Scrum, Microsoft Office Suite (Word, Excel, PowerPoint) 16.0, Lucidchart, JIRA 8.20, Google cloud SQL, Google IAM, Google cloud security, balsamiq, HP ALM 5.0, Google Data studio, Swagger 3.18

Sr Business System Analyst

Kentucky department of Unemployment Insurance - Frankfort, KY

March 2018 to May 2019

This project aimed to modernize the unemployment insurance system for a state labor department. Objective is to replace an outdated legacy infrastructure with modern technology stacks. Embracing microservices and AWS cloud services, the goal is to enhance efficiency, security, and user-friendliness. The project aims to meet the needs of a growing population and comply with evolving regulations, transforming the delivery of unemployment benefits and administrative processes.

Roles and responsibilities:

- Collaborated with state government officials, unemployment insurance experts, and system users to gather detailed functional and non-functional requirements for the modernization project. Conducted interviews, and workshops to elicit requirements effectively.
- Conducted feasibility study, Cost-Benefit analysis, Risk analysis, and impact analysis for the proposed set of enhancements.
- Identified data sources and performed data assessment to aid with the migration and other business improvements for the system.
- Ensured that the new system adhered to all relevant regulatory requirements like U.S. Department of Labor (DOL) Regulations, State Labor Department Regulations (SLDR), Claims Adjudication Rules, including those related to data security, and privacy.
- Utilized microservices architecture to meticulously design and architect the new system, breaking down its intricate components into manageable, independent services. This involved gaining profound insights into the unique functionalities of each component.
- Designed Process flow diagrams and documented those to understand the As-Is & To-Be processes and drafted gap analysis document.
- Conducted various interview and workshop sessions with Data Engineers, Data Scientist, and Data Architects to identify the attributes of the data source system, target system, entities, relationship, normalization status, datatype, and structure of the data source.
- Participated in SCRUM ceremonies like sprint planning, sprint review, sprint retrospective meetings and daily stand-ups.
- Used JIRA to convert requirements into user stories. Assisted Product Owner in writing acceptance criteria, Definition of Ready, and Definition of Done for the potentially shippable product increment. Collaborated with team using Confluence for project development.
- Assisted PO and feature teams in estimating user stories using Relative Mass Valuation and Walking Skeleton estimation techniques.
- Participated in data assessment & profiling and created data mapping document to capture source-to-target mappings.
- Assisted in the Data Modelling process by creating conceptual, logical, and physical Entity Relationship models for the data transfer.
- Handled Data management with MySQL RDBMS writing queries to create views, and retrieve, insert, update, and delete data from relational databases. Participated in the configuration of ETL process from source and target data with AWS Glue.
- Collaborate with infrastructure team to design AWS environment and ensure they meet scalability & performance of the system.
- Engaged with Quality Assurance (QA) team to ascertain & enhance overall quality, security, and scalability of the software.
- Monitored and tracked different kinds of bugs, incidents, and defects using JIRA with test management Zephyr add-on.
- Directed User Acceptance Testing (UAT) and participated in & facilitated system testing via Smoke testing, Integration testing, Regression testing, Application Programming Interface (API) testing, Performance testing, and Sanity testing.

- Conducted API testing using POSTMAN on RESTful APIs to check the request and response body using GET, POST, PUT, Patch and DELETE operations on various endpoints based on request & response and documented the APIs using SWAGGER tool.

Environment:

- Water-Scrum fall, Jira 8.10, HP ALM, Informatica, Kubernetes, Confluence 7.7, AWS Lambda, AWS Cloud services, Swagger 3.18, postman.

Business System Analyst

Axis bank - Mumbai, India

September 2016 to February 2018

The main aim of this is to enhance the customer onboarding experience for Axis bank by implementing a seamless digital onboarding process. The project aimed to optimize customer satisfaction, ensure regulatory compliance, and streamline data management using industry-leading tools.

Roles and Responsibilities:

- Conducted extensive market research and collaborated with stakeholders to gather and analyze pain points, needs, and preferences.
- Utilized Salesforce CRM for effective customer data management, account management and to gain insights into customer behavior.
- Conducted thorough AS-IS and TO-BE analysis, identifying gaps and opportunities for improvement in the onboarding process.
- Collaborated with UX designers and developers to create wireframes and prototypes for an intuitive digital onboarding application.
- Contributed to breaking down Epics into User Stories using the vertical slicing method. Helped estimate the User Stories using the Planning Poker game in the Sprint Planning meeting and the Backlog Grooming meeting efficiently on a regular basis. Assisted Product Owner in the prioritization of Product Backlog Items by applying techniques such as the MoSCoW and KANO techniques.
- Implemented A/B testing through Google Optimize to optimize the onboarding process based on user behavior, resulting in a significant increase in customer completion rates. Led user acceptance testing (UAT) sessions and assisted QA team in creating test plans, test execution, critical test cases to validate the functionality and usability of the digital onboarding application.
- Successfully integrated the onboarding platform with existing CRM systems using MuleSoft, facilitating seamless data exchange.
- Employed Jira to plan, track, and manage project progress, optimizing resource allocation and timely delivery. And Leveraged Power BI for in-depth analysis of key onboarding metrics, generating insightful reports for stakeholders.
- Collaborated with data visualization tools, including Power BI and Tableau, to present onboarding performance data and insights in visually engaging formats for senior management.
- Actively monitored and analyzed onboarding performance, proactively identifying opportunities for further enhancement.

Environment:

- Agile (Scrum), JIRA 8.5.3, Confluence 7.6, BPMN (Camunda), Salesforce CRM, Power BI, Google Optimize, MuleSoft, Data Visualization Tools (Power BI, Tableau).
- ZerodhaBrokingLtd - Bangalore, India

Business Analyst

FINRA

October 2015 to September 2016

This project aims to develop an Online Portfolio Management System that enables individuals and institutional investors to manage their investment portfolios digitally. The system provides features such as account aggregation, portfolio tracking, asset allocation, investment research, goal-based planning, performance reporting, automation, and alerts. By offering convenient access, efficiency, transparency, risk management tools, and collaboration options, the project aims to empower users with a centralized platform to effectively manage their investments, make informed decisions, and track progress towards their financial goals.

Roles and Responsibilities:

- Ensured that the data stored follows all the regulations laid down by governing bodies like SEC, FINRA using Salesforce.
- Performed Gap Analysis, Cost-Benefit Analysis, Feasibility Study to understand AS-IS process and collaborated with the team to design TO-BE process based on the requirements which were gathered using Brainstorming sessions and Focus Groups.
- Created and maintained the Project Charter, Complete System, Business Requirement Document (BRD), System Requirement Specification (SRS), Product Backlogs, Sprint Backlogs, Burnup and Burndown chart and other relevant documentation.
- Worked closely with the development team to create mock-ups, wireframes, prototypes, and Use Case diagrams using Lucid Chart that envisioned system architecture and assisted data architects in building the data warehouse and schema designing.
- Experienced in the ceremonies of scrum and assisted the PO in prioritizing using KANO and estimating using Bucket System the product backlog and sprint planning meeting. Acted as a proxy product owner and proxy scrum master whenever necessary.
- Demonstrated expertise in testing REST APIs, performing CRUD operations and analyzing request/response mechanisms. Utilized SOA techniques to map URLs and supported development team with Postman and Swagger documentation.
- Generated SQL queries using joins, unions, and transformation rules to fetch data from the SQL Server database systems.
- Participated and worked with the QA team in writing test cases and test scripts for sanity testing, smoke testing, and integration testing to ensure all the features are tested exhaustively. Maintained an RTM using HP ALM to track all the test cases and issues.
- Involved in tracking the status of the sprints in JIRA and creating the Project Closure document using Confluence.
- Used Tableau to create dashboards where business insights can be visually represented and Salesforce to create summary reports.

Environment:

- Waterfall-Scrum Hybrid, JIRA, Confluence, Lucid Chart, Postman, Swagger, PL/SQL Developer, HP ALM, Salesforce, MS Outlook, MS Excel, Tableau.
- UTIassetmanagement - Mumbai, India
Dec 2014 - Aug 2015

Business Analyst

The project aimed to enhance the existing asset management software's dashboard to provide investment decision makers with improved insights and tools for better investment management. The enhanced dashboard would offer advanced analytics, performance tracking, and real-time comments from analysts and portfolio managers, ultimately supporting asset management, reporting, and performance tracking for the firm's existing investors.

Roles and Responsibilities:

- Developed understanding of various financial instruments such as Asset classes, Commodities, Bonds & Money Market instruments.

- Conducted detailed interviews with area experts to gather and document comprehensive requirements.
 - Assisted in analyzing existing documentation and business processes to fully comprehend the project scope.
 - Conducted Joint Application Development(JAD) session, document analysis, and interviews with stakeholders to gather requirements.
 - Collaborated with the Product Owner to decompose the project scope into user stories and define acceptance criteria and assisted the product owner in prioritizing and estimation process in Sprint Planning and Backlog Grooming meetings.
 - Actively participated in Scrum events including Sprint Planning, Daily Standup, Sprint Review, and Sprint Retrospective.
 - Assisted in the estimation and prioritization of user stories using techniques like Relative Mass Evaluation and MoSCoW.
 - Proficiently created various artifacts including User Stories, Use Cases, Use Case Diagrams, Workflow Diagrams, and UML diagrams
 - Collaborated with the testing team to define test plans, test scripts, and scenarios for Functional Testing and Regression Testing.
 - Utilized tools like JIRA to log and track defects and managed the testing process with the QA team.
 - Managed changing requirements by performing Impact Analysis and discussing feasibility during Daily Scrum meetings.
- Environment:
- Waterfall, MS Project, MS Office Suite, MS Visio, Confluence, Tableau, JIRA
- Environment:

Certifications and Licenses

Certified Scrum Master
