

SAI RAJESH

MOBILE: +1(972) 379 8117

E-MAIL: sairajesh1931@gmail.com

Professional Summary:

- Overall 8+ years of full stack development experience in all phases of Software Development Life Cycle (SDLC) which includes Analysis, Design, Development, Implementation and Testing of web based, enterprise business application based on JAVA/J2EE technologies.
- Having experience with all phases of Software Engineering (SDLC), Project Management (Waterfall & Agile/Scrum Methodologies), and Requirement Gathering, Analysis, User Interaction, Project Scope, Design, Coding, Testing, Web server installation, Deployment, Implementation, and Documentation.
- Experience in designing and developing front-end UI using HTML5, XHTML, PHP, DHTML, CSS3 frameworks, JavaScript, Typescript, jQuery, Bootstrap JS.
- Experience using Angular client-side JavaScript framework with NGRX to accomplish MVVM design flow
- Extensively used view rendering JavaScript frameworks like jQuery and React JS
- Developed real time data streaming solutions using Apache Spark/Spark Streaming and Kafka.
- Experience in unit testing tools of JavaScript framework like Karma, Jasmine, and Protractor for Angular for React JS.
- Having experience in developing web-based applications using Java/J2EE, Servlets, Struts (Struts, Tag Libraries and Struts custom validation rules, Tiles), Spring IOC, Spring MVC, Spring JTA, Spring IO, Spring AOP, Spring Security, Spring Boot, Spring Web Flow, Spring Transaction Management, Spring Data, Spring Batch, JDBC and Web Services (SOAP & Restful services).
- Experience in developing and deploying Microservice oriented applications using Spring Boot and Spring Cloud.
- Experience with container-based deployments using Docker, working with Docker images, Docker Hub and Docker-registries and Kubernetes.
- Extensive experience utilizing Java technologies: Spring, Hibernate, Web Services, JDBC, Servlets, Struts, JSP, JSF, EJB, JMS, XML.
- Spring Boot was used to integrate Micro Services with Hibernate ORM and write SQL queries for data access.
- Expertise in developing SOA (Service Oriented Architectures) and Microservice architectures using J2EE web services based on Restful (JAX-RS), SOAP(JAX_WS), JAX-RPC and JAXR (Java API for XML Registries) using frameworks like Apache CXF, Jersey, Wicket, Apache Axis.
- Experience with SQL and PL/SQL to query various Relational Database Management Systems including Oracle, MS SQL, MySQL, DB2 and PostgreSQL
- Having good experience in working with NoSQL databases MongoDB, Apache Cassandra and DynamoDB.

- Developed Unit test cases using Junit and Mockito within Test Driven Development (TDD) environment and used Karate framework for automation.
- Experience in integration testing tools like Selenium Web Driver, Cucumber (Behavior Driven Development testing)
- Experience with OpenShift platform in managing Docker containers and Kubernetes Clusters.
- Used Kubernetes for the runtime environment of the CI/CD system to build, test deploy.
- Worked on dockizing RESTful services by generating Docker images, pushing them to Docker Hub/AWS ECR, and orchestrating containers using AWS ECS.

Technical Skills:

Java/J2EE Technologies	Servlets, JSP, JSTL, JDBC, JSON, JMS, JPA, EJB, Swing, Java Beans, Applets, Multi-threading, Java Networking, Spring data, Spring Boot, Spring framework, Spring JDBC Templates, java mail, Apache Kafka, Google API, Hibernate, Web Services, SOAP, RESTFUL
Programming Languages	Java, SQL, Python, PL/SQL
Application/Web Servers	Tomcat, Oracle/BEA WebLogic, IBM WebSphere, JBoss, Eclipse
Frameworks	Spring 3.x/4.x/5/x, Struts 2.x/1.x, Hibernate, Spring MVC, Angular Ionic, JSF
DevOps Tools	Docker, Kubernetes, CI/CD, Amazon Web Services (EC2, EBS, EKS), Jenkins
Web technologies	JSP, JavaScript, jQuery, AJAX, XML, XSLT, PHP, HTML, DHTML, CSS, Bootstrap, Angular 2.0/4.0, React JS, Express.js, Ext JS, Backbone JS, Node JS
Webservice Frameworks	JAX-WS, JAX-RS, Apache CXF, Axis, Jersey, REST
XML Tools	JAXB, Apache Axis, Altova, XML Spy
Methodologies	Agile, Scrum, RUP, TDD, OOAD, SDLC Waterfall model
Modeling Tools	UML, Rational Rose, Visio
Testing technologies/tools	JUnit, JMeter, Selenium, Log4J, Cucumber, Mockito, Karma, Jasmine
Database Servers	Oracle, DB2, SQL Server, MySQL, PostgreSQL, MongoDB, Cassandra
Version Control	Git, CVS, SVN, Clear Case, Bitbucket
Build Tools	Maven 3.0, PEGA, Gradle, ANT, Jenkins, Jira, Grunt, Gulp, Bower
Cloud	Amazon Web Services (AWS) Cloud, Google cloud Platform (GCP), Azure, Pivotal Cloud Foundry (PCF)

Professional Experience:

Client: LabCorp, Raleigh, NC

Dec 2019 - Present

Role: Java Full Stack Developer

Responsibilities:

- Requirement Analysis and documentation according to SDLC Methodologies utilizing Java 5, Agile Methodology (SCRUM) for gathering the Requirements, Plan, Analysis, Development, and Framework Testing.
- Implemented Spring Boot with Micro services to divide the application into several orchestral applications, produced REST APIs using JAX-RS implementation and created REST APIs like POST, GET, and PUT.
- Experienced in producing and consuming the SOAP and RESTFUL Web Services using JAX-RS, JAX-WS, JAX-B APIs and implemented using Jackson and Spring REST libraries.
- Implemented security guidelines for applications utilizing Spring security controlled by OAuth and worked with different solution to stop security issues like XSS, CSRF, CORS.
- Experienced in making web pages at the client-side dynamic by utilizing jQuery to make the HTML5 and CSS3 code to communicate with the JavaScript functions.
- Deployed the drools rules as a help in J2EE stack environment and packaged and deployed the application in JBoss and helped to login page to Inside View with Microsoft OAuth APIs.
- To deal with timeout errors when the target services are unavailable, the Hystrix circuit breaker pattern was implemented. Spring Retry based on Hystrix circuit breaker fallback response.
- Designed and implemented the application utilizing JSP, JSF, JPA, Spring Data, Spring Annotations, Servlets, Struts framework, Spring Transactions, Spring MVC, AngularJS, Hibernate and JDBC involved Spring Framework for Dependency Injection.
- Worked on Agile development methodology and assembled the application with Test Driven Development (TDD) established efficient logging and Exception Handling using Spring AOP.
- Used AngularJS to handle the data binding and Modules and Filters objects in accordance with application requirements, we built REST APIs from scratch, consuming data from the SOAP XML, JAXB, Enterprise Java Beans (EJB) and we published them in the API management team.
- The Test-Driven Development (TDD) environment and the Agile development technique were used for all development activities involving the provisioned load balancer, the auto-scaling group, and the launch configuration for the micro service.
- Micro services architecture was implemented using Spring Boot to make applications more compact and autonomous. DynaTrace was also used for performance monitoring and root cause analysis.
- Worked on Multithreaded applications to increase their performance by using a REST service to send data in JSON/XML format between front-end and server with AJAX.

- Eclipse was used as the IDE, and standard/plug-in features of Eclipse were used for editing, debugging, compiling, formatting, build automation, test case template generation, and accessory code generation.
- Vault tool is used for project management tracking, Issue tracking and bug tracking WebSphere, Tomcat Application Servers as part of production implementation.
- By creating custom tag libraries and hosting the application on WebSphere and used Maven, ANT, Gulp as the build automation tool, we were able to successfully provide multilingual functionalities.
- GIT and CVS controls were created to monitor and maintain the various versions of the project. Log4j was used to record the log, which included runtime exceptions and logging information that was useful in debugging the issues.

Environment: Java 5.0, J2EE, Spring MVC, Hibernate, JSP, Servlets, HTML, Spring Boot, CSS, Rest API, JavaScript, JAXB, jQuery, Express.js, AngularJS, SOAP, Micro services, RESTful, Maven, GIT, CVS, Log4J, JDBC, Test Driven Development(TDD), Agile & SDLC methodology, JSON, XML, AJAX, Eclipse, JAX-RS, Web Sphere, JBoss, EJB.

Client : Med Impact Healthcare Systems INC, San Diego, CA

Aug 2017 – Dec 2019

Role: Java Full Stack Developer

Responsibilities:

- We used Spring Boot framework for designing and developing microservices.
- Continuously monitor and respond to Jira tickets during the development period as well as during application support.
- Worked with streaming technologies like Kafka, JMS, SWING to create activity journals, Transaction Inquiries, and Notifications, as well as to connect with other microservices.
- Implementation of common components at the abstraction level which is commonly used for other microservices.
- Responsible for creating UI components by using HTML, DHTML, JS, ReactJS, Ext JS, Bootstrap and NodeJS.
- Participated in project development using Agile methodology based on Sprint.
- Building and configuring CI/CD pipelines in collaboration with the DevOps team and using AWS technologies such as Jenkins, Kubernetes, Docker, IAM, S3, and EC2.
- Involved in database migration scripts and expertise with the flyway data migration tool.
- Prepare version planning and handle the release/deployment process by the end of the sprint.
- Provide troubleshooting and performance tuning in SIT, UAT, MIG, PT, and PROD environments.
- Responsible for the project's git governance process, ensuring that developers follow the SOP process.
- Worked on API testing using Cucumber.
- Prepared product-specific unit test cases with Junit and Mockito, as well as logging with Log4J.
- Maintaining the source code using GIT.
- Code Review and Code Optimization.

- Involved in the fixing of security and vulnerability issues.
- Prepared the runbook for UAT and production environment deployments.

Environment: Java, PostgreSQL, Spring Boot, Jenkins, Docker, JIRA, AWS, GitLab, Microservices, Kafka, Kubernetes, API, ReactJS, Bootstrap, HTML, DHTML, JS, Node JS, JMS, Agile Methodology, Junit, Mockito, Log4J.

Client: FIS Global, Bangalore, IN

Aug 2015 – July 2017

Role: Full Stack Java Developer

Responsibilities:

- Involving in various stages of the Software Development Life Cycle (SDLC) using Agile Methodology and followed Scrum sessions.
- Using Agile Scrum approaches for application development, and merge code to integrate branch modules. Spring MVC with Hibernate framework to develop the server-side application and concrete classes to interact.
- Experience working with NoSQL databases such as MongoDB and Cassandra to handle huge amounts of data. Involved in Handled Database access operations.
- NodeJS was used to structure Java Script code in an MVC (Model, View, and Controller), while AngularJS and D3JS were used to create a single-page application.
- Experience in containerization technologies such as Docker, Kubernetes, or Rancher. Well versed with Open Stack based cloud infrastructure.
- Creating DAO interface, abstract class and concrete classes to interact with persistence entities. To create an interactive and dynamic user interface, we used jQuery, Bootstrap, CSS3, JSP, JPA and JSTL.
- Using AJAX calls for data updates in UI, as well as JSON data parsing and the Struts validation framework, are used to provide front end validations.
- Setting up Big-remedy, Carbon-Black, and Flex-era on cloud VMs to remedy security vulnerabilities, Configuring firewall settings on Google cloud platform (GCP).
- Designing and developing using Jersey framework REST, Rest API, and SOAP to queue things for a service that requires the stuff to be done asynchronously.
- Using the Hibernate Criteria API to query the database and execute other CRUD activities to connect with databases, Reverse Engineering was undertaken to map POJO classes to databases so that other applications could access data on the server.
- Responsible for transferring current IBM MQ modules to Apache Kafka and developing Kafka adaptors to decouple application dependency.
- Used Angular7 Dependency Injection to create Services that consume REST APIs and interact amongst components.
- Extensive knowledge of the Jenkins Continuous Integration/Continuous Delivery (CI/CD) tool for deploying applications to AWS and on-premises servers.
- Wrote unit test cases for controllers, filters, and services in Jasmine and Karma for backend persistence. Worked on server-side validation utilizing multiple web forms in an annotation-based method for application testing and automation framework like Selenium.

- Using SQL Server to implement stored procedures and dynamic SQL with object declarations and dependencies. For a larger view of the project's content layout and presentation, Log4j and I18N technology were used.
- Creating a server-side application to interface with a database using Spring Boot and Hibernate as per the requirements provided.
- Developing the Presentation and Controller layers with JSP, HTML, JavaScript, Spring 5, and Persistent layer DAO with Hibernate Persistence Strategy for all modules.
- Expertise in several J2EE design patterns like Singleton, Factory, Abstract Factory, DAO, MVC, Façade & Business Delegate in the development of enterprise applications.
- Using Amazon API Gateway, implement AWS functions to run scripts in reaction to events in Amazon Dynamo DB tables, S3 buckets, and HTTP requests.
- Developing POJOs for the Data Model and individual HBM records to delineate Java 8 objects from relational database tables.
- Designed and developed REST based Micro services with Spring Boot and Jenkins for continuous integration.
- Angular JS services that perform HTTP calls to a backend REST API for data retrievals process to query the database.
- Configure Kafka messaging queues to update request status in JBoss and Tomcat management, as well as version control GIT, CVS, SVN for merging branches and using Source Tree to resolve conflicts and issues depending on priority.
- Working with Threads, Multithreading, Synchronization, and Collection API to define technical specifications, we constructed various Advice (before, after) methods as needed, such as logging and version control, utilizing Spring AOP.

Environment: Java 8.0, J2EE, Spring MVC, Agile Methodology, Jersey framework, Selenium, Spring Boot, JSTL, Angular 7, Angular JS, Micro services, IBM MQ, SOAP, Rest, Rest API, Node.JS, JSP, Hibernate, JSON, AWS, Kafka, CI/CD, Jenkins, Docker, Kubernetes, Google Cloud, Mongo DB, Cassandra, JPA, JavaScript, React, jQuery, Ajax, SQL, HTML5, CSS3, bootstrap 3, GIT, JUnit, Log4j, Hibernate.
