

SRIVANI SOLLETY

Contact: +1- 321-978-2106

Email: sri.solleti@gmail.com

PROFESSIONAL SUMMARY

- A dynamic and goal-oriented Sr. Data Engineer with 9+ Years of extensive experience specializing in development of Enterprise applications using various technologies. Leadership and managerial role in improving common software process and initiation of new business solutions.
- Expertise in design, develop, test, and debug large scale complex platform using big data technologies like Python, Spark, ETL Pipelines, Azure, ADF, Dataflow, Synapse, GCP, Big Query, SQL, Data Analysis, Scala, Hive, Kafka, Kafka Streaming, HDFS, Sqoop, Oozie.
- Implemented DevOps and CI/CD best practices for data pipelines using tools like Azure DevOps, Git, and Jenkins. In depth understanding/knowledge of Hadoop Architecture and various components.
- Experience on Migrating SQL database to Cloud environments (GCP, Azure) and controlling and granting database access and Migrating On premise databases to cloud storage / Data Lake store/ Azure Data Lake Storage (ADLS).
- Good Understanding of Azure Fabric and Cosmos DB in building AI driven applications.
- Knowledge on synchronizing data from MongoDB atlas into Microsoft fabric's one lake for unified storage and analytics.
- Understanding of utilizing DirectQuery, to maximize dashboard responsiveness for tableau extract on fabric data for stream analytics.
- Experienced with Teradata utilities Fast Load, Multi Load, BTEQ scripting, Fast Export, SQL Assistant and Tuning of Teradata Queries.
- Extensive knowledge in all phases of Software Development Lifecycle (SDLC) and well versed in using Software development methodologies like Agile, Scrum and Test-Driven Development (TDD).
- Excellent understanding of Object-Oriented Programming Concepts and Design. Good knowledge with ETL and Datawarehouse.
- Good knowledge of NoSQL database and AI and Machine Learning. Worked alongside various teams within the business or the management team to establish business needs and analyze the data.
- Good understanding of Business workflow, Business logic and Business methods for further implementation of user requirement in a distributed application environment.
- A quick learner, Self-motivated with ability to work in team/independently and adapt quickly to new and emerging technologies. System analyst specializing in object-oriented analysis and design.
- Good understanding of Adobe Analytics concepts including tracking, reporting, and digital data measurement.
- Familiar with Customer Journey Analytics (CJA) framework, data stitching, and customer path analysis for marketing insights.
- Knowledge of integrating behavioral data from Adobe tools into analytics workflows for campaign performance evaluation.

TECHNICAL SKILLS

Big Data & Distributed Systems	Hadoop (HDFS, MapReduce, YARN), Spark/PySpark, Hive, Pig, HBase, Sqoop, Kafka Streaming, Databricks, Teradata
Programming & Scripting	Scala, Java, Python, SQL (RDBMS & Advanced Querying), TSQL
Cloud Platforms & Services	Google Cloud Platform (GCP – Data Fusion, Pub/Sub), Microsoft Azure (Data Lake Storage, Data Factory), Snowflake (Cloud Data Warehousing)

DevOps, CI/CD & Automation	Jenkins, OpenShift, DevOps (CI/CD practices), Autosys, Apache Airflow
Data Visualization & Analytics	Power BI (Fundamentals), Kibana, Data Analysis & Reporting
Databases & Graph Technologies	SQL Databases (RDBMS), Neo4j (Graph Database), Oracle, Power BI, SSIS, SSRS
APIs & Integration	GraphQL, Pub/Sub Messaging Systems

EDUCATION

- Master of Science: Computer Science, University of Central Missouri - Warrensburg, MO
- Bachelor of Technology: Information Technology, CMR Institute of Technological University - Hyderabad, India

PROFESSIONAL EXPERIENCE

Network Health - Remote

Sept 2025 – Till Date

Lead BI Data Engineer

Responsibilities:

- Worked on Implementation Business Rules/Filters into the ETL (SSIS) process ensuring that data is ready for consumption into QRM and any other downstream process.
- Build data pipelines in airflow in GCP for ETL related jobs using different airflow operators. □ Experience in GCP Dataproc, GCS, Cloud functions, BigQuery.
- Experience in moving data between GCP and Azure using Azure Data Factory. □ Experience in building power bi reports on Azure Analysis services for better performance.
- Used cloud shell SDK in GCP to configure the services Data Proc, Storage, BigQuery Coordinated with team and Developed framework to generate Daily adhoc reports and Extracts from enterprise data from BigQuery.
- Designed and Co-ordinated with Data Science team in implementing Advanced Analytical Models in Hadoop Cluster over large Datasets.
- Wrote scripts in Hive SQL for creating complex tables with high performance metrics like partitioning, clustering and skewing □ Work related to downloading BigQuery data into pandas or Spark data frames for advanced ETL capabilities.
- Worked with google data catalog and other google cloud API's for monitoring, query and billing related analysis for BigQuery usage.
- Worked on Implementation a separate History database to reduce time to recover in the event of a significant event that required the database to be restored from a backup.
- Worked on Implementing a Recon process between GL & Book Value (SSRS) with adjusting entries to ensure integrity of data. Added Received Collateral into the Deposit and Funding Reports.
- Worked on Implementation Business Rules/Filters into the ETL (SSIS) process ensuring that data is ready for consumption into QRM and any other downstream process.
- Worked on Implementation a separate History database to reduce time to recover in the event of a significant event that required the database to be restored from a backup.
- Hosted several meeting with end users to create user stories and BRD.
- Supported efficient data insertion, manipulation and retrieval using various joins, indexed views, stored procedures and functions.
- Responsible for creating database objects like table, views, stored procedures, triggers, functions using T-SQL to provide structure to store data and to maintain database efficiently.
- Created SSIS packages to capture the incremental changes for the data warehouse.
- Ability to communicate with Supervisors, Executives,BA's,DBA's,Developers Optimized Stored Procedures and long running queries using indexing strategies and query optimization techniques.

Bank Of America - Hybrid**Nov 2024 - May 2025****Sr. Data Engineer****Responsibilities:**

- Worked in TechADS (Tech Authorized data store) team to manage data across sourcing, controlling and provisioning to Stakeholders.
- Used Extract Validation Framework to validate data which involves data quality, duplication, recon checks and custom validation across Hadoop and oracle environments for various sources using Config and Object Pull using oracle SQL.
- Worked on analyzing RRDA jobs to ensure there are no duplicate views which are refreshed and also drop un-used views in Oracle.
- Built and optimized ETL pipelines in Python and PySpark, scaling batch processing to handle terabytes of structured and semi-structured data, improving throughput and resource efficiency.
- Worked on using existing notebooks in migrating data from existing applications to Azure DW using Databricks.
- Scheduled and monitored Azure Data Factory pipelines and Spark jobs, incorporating ITSM best practices for performance tracking.
- Worked extensively with big data file formats such as AVRO, Parquet, CSV, ORC, and JSON, leveraging best practices.
- Consolidated fragmented data sources into unified flows, improving data lineage, accuracy, and maintainability while supporting operational intelligence using Nifi.
- Used Nifi to Build scalable routing and transformation pipelines for diverse inputs, standardizing data delivery across multiple downstream consumers.
- Worked on migrating existing extract validation to PySpark for better performance.
- Conducted root cause analysis (RCA) for failed data loads, latency issues, and schema mismatches across multiple stages of the ETL pipeline.
- Performed RCA for deviation failures for given data sources and analyzed on everyday snapshots.
- Updated Spark flag and performed end to end testing on predecessor and successor jobs. Fixed file format and data issues.
- Designed and executed production DAGs that orchestrated complex ETL pipelines using Airflow.
- Used Airflow to Optimize workflow performance to reduce execution time, while simultaneously improving pipeline freshness across numerous downstream services.
- Created and maintained JIL scripts in Autosys for job scheduling and operational automation across upstream and downstream data consumers.
- Addressed AdHoc Bugs from QA team, fixed and validated in UAT.
- Partnered with data architects to optimize performance and cost-efficiency of Azure Data Lake storage, compute, and query services.
- Utilized DevOps/DataOps practices include CI/CD pipelines, Git versioning, and automated testing frameworks to ensure rapid and secure deployment of data solutions.
- Supported the monthly release cycle by coordinating data validation, pre-deployment checks, and production issue resolution during deployment windows.

Optum - Remote**Jan 2024 - Nov****2024****Sr. Data Engineer****Responsibilities:**

- Developed Spark applications using PySpark and Spark-SQL for data extraction, transformation and aggregation from multiple file formats for analyzing & transforming the data to uncover insights into the

customer usage patterns.

- Worked closely with ETL Developers in designing and planning the ETL requirements for reporting,
- as well as with business and IT management in the dissemination of project progress updates, risks, and issues.
- Experience in Developing ETL solutions using Spark SQL in Azure Databricks for data extraction, transformation and aggregation from multiple file formats and data sources for analyzing & transforming the data to uncover insights into the customer usage patterns.
- Worked on extract Transform and Load (ETL) data from Sources Systems to Azure Data Storage (ADLS) services using a combination of Azure Data Factory, T-SQL, Spark SQL and U-SQL Azure Data Lake Analytics.
- Worked on Data Ingestion to one or more Azure Services - (Azure Data Lake, Azure Storage, Azure SQL, Azure DW) and processing the data in In Azure Databricks.
- Involved in designing data warehouses and data lakes on regular (Oracle, SQL Server) high performance on big data (Hadoop - Hive and HBase) databases. Data modeling, Design, implement, and deploy high-performance, custom applications at scale on Hadoop /Spark.
- Designed and developed the pipelines using Databricks and automated the pipelines for the ETL processes and further maintenance of the workloads in the process.
- Worked on Identifying, designing, and implementing internal process improvements: automating manual processes, optimizing data delivery, re-designing infrastructure for greater scalability, etc.
- Created Azure SQL database, performed monitoring and restoring of Azure SQL database. Performed migration of Microsoft SQL server to Azure SQL database.
- Worked with Azure Blob Storage and developed the framework for the implementation of the huge volume of data and the system files.
- Developed Continuous and streaming Ingestion workloads using Kafka, Spark and Apache Iceberg.
- Consolidated multiple healthcare systems into a unified, logical data model—driving consistency and supporting analytics growth across teams.
- Implemented secure data handling procedures, including masking, hashing, and encryption techniques to protect PII and comply with HIPAA, GDPR, and CCPA regulations.
- Developed spark jobs on Databricks to perform tasks like data cleansing, data validation, standardization and then applied transformations as per use case.
- Implement One time Data Migration of Multistate level data from SQL server to Snowflake by using Python and SnowSQL.
- Have designed and developed ETL mapping for data collection from various data feeds using REST API and data sources include feeds from mobile, and other partner feeds.
- Hands on experience in scheduling data ingestion process to data lakes using Apache Airflow.
- Developed JSON Scripts for deploying the Pipeline in Azure Data Factory (ADF) that process the data using the SQL Activity.
- Good understanding of building a scalable data warehouse on the Snowflake platform.
- Knowledge on building data pipelines and ETL processes, integrating data from various sources into the Snowflake platform.
- Worked with stakeholders to define SLAs, success metrics, and ensure proper versioning and documentation within DevOps pipelines.
- Collaborated with cross-functional teams to design and deploy scalable data solutions, resulting in improved data availability and quality.

Environment: Python, Azure Data Factory, Databricks, SQL, ETL, Azure Cloud, Python, PySpark, Snowflake, Airflow.

Best Buy, Richfield, MN - Remote

Feb 2020 – Dec 2023

Sr Data Engineer

Responsibilities:

- Worked on data cleaning and reshaping, generate segmented subsets using NumPy and Pandas in Python.

- Optimized complex SQL queries involving multiple joins and advanced analytical functions to perform data extraction and merging from large volumes of historical data stored, validating the ETL processed data in target database.
- Implemented near real-time data pipelines to process semi structured data by integrating raw records from data sources using PySpark.
- Worked with Big Query, to analyze and generate model output data.
- Good understanding of Teradata SQL Assistant, with Data Analytics, Data Reporting, Ad-hoc Reporting, Graphs, Scales, Pivot Tables and OLAP reporting.
- Worked on G-Cloud functions to load data into BigQuery for on arrival csv files in GCS bucket.
- Worked on generating daily Adhoc reports and extracts from enterprise data from BigQuery.
- Identify the variables that significantly affect the target.
- Worked on creating data pipeline using Nifi, to load data from on premise (Teradata) to Google cloud Storage (GCS).
- Created and managed data storage solutions using GCP services such as BigQuery, Cloud Storage, ADLS and Cloud SQL.
- Implemented ETL process to streamline the import of data from various sources into BigQuery warehouse.
- Created BTEQ Scripts for pre population of the work tables prior to the main load process.
- Experience building data pipelines using PySpark and BigQuery and worked on building DAG in Airflow.
- Used PySpark to load data from GCS to Big Table and automated the flow.
- Implemented the machine learning algorithms using python to predict the parts recommended for a service request.
- •Used AWS EMR to transform and move large amounts of data into and out of other AWS data stores and databases, such as Amazon Simple Storage Service (Amazon S3) and Amazon DynamoDB.
- Designed and developed Informatica mappings for data loads Responsible for the Dimensional Data Modeling and populating the business rules using mappings into the Repository.
- Built Nifi flows to read data from various sources like Oracle/Teradata and load in Big Query
- Worked on gathering business requirements during the whole project life cycle.
- Work on creating model data using PySpark and load data in GCP.
- Built ETL pipelines to move data from On Prem to Cloud CS using Cloud Fusion API.
- Automate model output using Unix.
- Integrate custom visuals based on business requirements using Power BI desktop.
- Ability to work individually, as well as partner with small teams of Data Analysts/Data Scientists during all stages of projects, including planning and execution.
- Extract, compile and track data and analyze data to generate reports.

Environment: SQL, ETL, GCP, Big Query, Unix, Azure Cloud, Python, PySpark, Ni-Fi, Teradata.

Wells Fargo, St. Louis Park, MN

Jun 2019 - Jan 2020

Big Data Consultant

Responsibilities:

- Worked closely with other data and analytics team members to optimize the company's data systems and pipeline architecture.
- Led cross-functional teams of engineers, technicians, logistics and services to improve tools for data gathering and analysis.
- Worked closely with data science team to understand the data and migrated from source like SQL and Teradata to cloud GCP.
- Develop new and existing modules in Python while working with cross functional teams.
- Followed ETL standards - Audit activity, Job control tables and session validations.
- Used Exceptional mappings to generate dynamic parameter files after the staging loads.
- Used Shared folders to create reusable components (Source, target, email tasks).

- Developed single dynamic ETL mapping to load reference tables.
- Designed and built the infrastructure for data extraction, preparation, and loading of data from source systems (ORACLE) to HBASE.
- Queried datasets using SQL and cleaned it using python for modelling.
- Demonstrated experience in analysis, preparation and presentation of data required.
- Used Spark-SQL to load JSON data and create schema RDD and loaded into HIVE tables and handled structured data using spark-SQL.
- Utilized various tools to evaluate performance and implement remedies to improve performance, including tuning database parameters and SQL statements.
- Loaded the data into Spark RDD and do in memory data computation to generate the output response using python.
- Worked on implementing NAICs, model output data as part of data model development and model scoring.
- Worked closely with data scientists to understand the business requirements and implemented the changes.
- Worked with data service providers to explore APIs, analyze and forecast impact of integrating new data sets. Work with Engineering throughout the entire process of onboarding new data sets.
- As part of NDM file transfers from OSDs to EDL, worked on setup and implementation using Shell Script.
- Worked on providing technical knowledge of Extract/Transform/Load (ETL) solutions for Business Intelligence projects.
- Identified, architected, deployed and communicated the RPA, Chatbot, AI/ML technical infrastructure and delivery platform.
- Worked on creating Hive DDL's and configuration files based on the source table schemas to move individual feeds based on the source.
- Worked on creating JIL for Autosys, for scheduling and automating jobs.
- Worked on developing Firewatcher application using Java, to read files from NAS and hit scrubbing API services and land scrubbed files.

Environment: SQL, Java, Python, Spark, Agile, JIRA, Shell Scripting, Sqoop, Hive, HBase, Autosys.

Optum - Client, Eden Prairie, MN
2019

Jun 2018 - Jun

Big Data Consultant

Responsibilities:

- Utilized OpenShift for the runtime environment of the CI/CD system to deploy data into different environments.
- Experienced in working with enterprise data models like ELDM & ECMM (ingest error collection validation, XML validation against S2T Mapping).
- Experienced with creating ETL pipelines using Talend Studio and monitored daily jobs using TAC.
- Prepared migration document to move the mappings from development to testing and then to production repositories.
- Created Pre/Post Session/SQL commands in sessions and mappings on the target instance.
- Generated queries using SQL to check for consistency of the data in the tables and to update the tables as per the Business requirements.
- Developed APIs using XQuery on top of NoSQL DB Mark Logic.
- Wrote extensive HIVE scripts for source system data analysis.
- Generated HIVE views on top of HIVE Tables to read data from various source systems and provide a 360 view of customer data.
- Used Spring Kafka API calls to process the messages smoothly on Kafka Cluster setup.
- Leveraged DevOps techniques and practices like Continuous Integration (CI), Continuous Deployment (CD), Test Automation, Build Automation and Test-Driven Development to enable the rapid delivery of working code utilizing tools like Jenkins, Maven, and GitHub/ CodeHub/ SVN.
- Wrote multiple Shell scripts to validate source file validations (daily, Weekly & Monthly files).

- Created test scripts using SOAP UI to automate API testing for Integration & Regression.
- Developed and executed scripts for API performance testing using JMeter & NeoLoad (6.3v).
- Reviewed/analyzed quality data/API metrics/reports using KIBANA (customer facing dashboards) and associated remediation/performance improvement opportunities.
- Used Confluence to create, share and discuss content and projects.
- Member of the Technical Design team Build and Release Module for Development of new products and document release metrics, software configuration process.

Environment: Spark, Kafka, Hive, OpenShift, XQuery, MarkLogic, GitHub, SoapUI, NeoLoad, CI/CD, Jenkins, Java, Agile, Rally, Shell Scripting. Xray framework, Kibana.

TCF – Client, Plymouth, MN

Jan 2018 - May

2018

Hadoop Consultant

Responsibilities:

- Worked on Big Data infrastructure for batch processing and real-time processing using Apache Spark. Built scalable distributed Hadoop cluster running Hortonworks Data Platform (HDP 2.6).
- Responsible for design and development of Spark SQL Scripts based on Functional Specifications.
- Used the backend data to calculate the metrics rolling to the customer level on a Quarterly basis.
- Worked with quality and operational metrics in supply chain business unit for top customers.
- Optimized the SQL queries using Explain Plan.
- Created control files and used SQL Loader to load the data.
- Used Spark Data Frames, Spark-SQL and RDD API of Spark for performing various data transformations and dataset building.
- Involved in creating data-lake by extracting customer's data from various data sources to HDFS which include data from Excel, databases, and log data from servers.
- Designed and implemented Hive queries and functions for evaluation, filtering, loading and storing of data.
- Experience in importing and exporting the data using Sqoop from HDFS to Relational Database systems/mainframe and vice-versa.
- Used Apache Oozie for scheduling and managing multiple Hive Jobs. Knowledge of HCatalog for Hadoop based storage management.
- Used Sqoop to import the data from databases to Hadoop Distributed File System (HDFS) and performed automated data auditing to validate the accuracy of the loads.
- Wrote shell scripts for rolling day-to-day processes and is automated.
- Utilized Agile and Scrum Methodology to help manage and organize a team of developers with regular code review sessions.
- Techno-functional responsibilities included interfacing with users, identifying functional and technical gaps, estimates, designing custom solutions, development, leading developers, producing documentation, and production support.

Environment: Hortonworks, Data Analysis, MySQL, HBase, Hive, Impala, Flume, Spark, Sqoop, Kafka, Oozie, RDBMS, Java, Agile, Shell Scripting.

Western Union, Montvale, NJ

Mar 2017 - Dec 2017

Hadoop Platform Engineer

Responsibilities:

- Led Ad-hoc team, where several requests from users are analyzed and data is provided.
- Supported Ad-hoc reporting requests from executive management and LOB from time to time using SQL and automated the scripts.
- Remarkable experience in designing ETL processes and developing source to target mappings.
- Expert in developing, testing, and deploying ETL solutions.

- Familiarity with data warehousing solutions in an Oracle 10g environment.
- Monitored daily jobs running in cluster, validated the tables, and identified nulls.
- Responsible for application and platform integration design and planning.
- Created Sqoop job with incremental load to populate Hive External tables.
- Responsible for coding Java Batch, Restful Service, Map Reduce program, hive queries, testing, debugging, Peer code review, troubleshooting and maintain status report.
- Experience in manipulating/analyzing large datasets and finding patterns and insights within structured and unstructured data.
- Maintained effective communication with clients, business and partners as needed.
- Experience in designing and developing POCs in Spark using Scala to compare the performance of Spark with Hive and SQL/Oracle.
- Worked with various POCs related to graph databases (Neo4j) and BI solution to improve the current analytics platform.
- Closely worked with architects to improve the applications and initiated team in implementing.
- Designed and developed PIG data transformation scripts to work against unstructured data from various data points and created a base line.
- Interacted with Business Team, Business Requirement Gaps Analysis, Customer Experience and Impact Analysis of application.
- Aligned execution priorities - project delivery, employee goals, and establish service levels with business and functional owners to drive service quality through quality control.
- Provided direct oversight of development teams, adhering to development standards and SLAs, and escalating risks and issues to the Engineering Delivery Head.
- Communicated with business users regularly to understand their requests and provided the required data.
- Organized daily status calls and weekly meetings with the team.
- Coordinated with systems partners to finalize designs and confirm requirements.
- Provided continued maintenance and development of bug fixes and patch sets for existing web applications.
- Developed data architecture design to enable analysts to perform targeted customer analysis.

Environment: Data Analysis, MySQL, HBase, Hive, Impala, Flume, Spark, Java, Scala, Agile, Neo4j, KEYLINES, Cypher, Shell Scripting.

Western Union, San Francisco, CA
2017

Mar 2016 - Feb

Hadoop Developer

Responsibilities:

- Implemented processes for extraction and loading of ETL data into data warehouses and marts.
- Experience in troubleshooting in MapReduce jobs by reviewing log files.
- Used Sqoop, Hive and Java map reduce to ingest customer behavioral data into HDFS for analysis.
- Developed MapReduce programs for pre-processing and cleansing the data in HDFS obtained from heterogeneous data sources to make it suitable for ingestion into Hive schema for analysis.
- Implemented Partitioning, Dynamic Partitions, Buckets in HIVE.
- Responsible to manage data coming from different sources.
- Imported the data from different sources like HDFS/HBase into Spark RDD.
- Experienced with Spark Context, Spark -SQL, Data Frame, Pair RDD's, Spark YARN.
- Worked as a UI developer for NEO4J to develop Tools used by Digital Review Team (DRT) and Monitor review team (MRT) using underscores, HTML, Ajax, jQuery, CSS, and Bootstrap.
- Worked with Keylines to implement link analysis, which is used for real time decision.
- Worked with Cypher and SQL queries to fetch test data.
- Implemented AJAX for cross-browser compatibility.
- Followed Agile methodology and involved in daily SCRUM meetings, sprint planning, showcases and

retrospective.

- Worked with HBASE and Data ingestion for the project BDP and age variables.
- Worked on data visualization (Dashboards) for the Risk Analysis and management (RAM) for the payments in western union.
- Involved in analyzing the requirements and participated in discussions with business analysts.
- Coordinated with systems partners to finalize designs and confirm requirements.

Environment: MySQL, HBase, Hive, Impala, Flume, Kafka, Scala, Spark, Spring Framework, Java, Agile, HTML, CSS, JQUERY, AJAX, BOOSTRAP, JAVASCRIPT, KEYLINES, Cypher, AngularJS.
