SUMMARY

Experienced System Administrator with 3+ years in managing Linux servers, cloud infrastructure (AWS, VMware), and network protocols (BGP, OSPF). Expertise in system optimization, security including firewalls, VPNs, and automation using Ansible and AWS CLI. Strong background in LAMP stack administration, database optimization, and high availability. Proficient in monitoring tools such as Zabbix, Prometheus, Nagios, and ELK stack. Skilled in incident resolution, server hardening, and ensuring system reliability and uptime.

EDUCATION

Master of Science in Computer Science

University of Bridgeport, USA

Aug 2022 - Dec 2023

Bachelors of Technology in Computer Science and Engineering

Keshav Memorial Institute of Technology, India

Aug 2017 - Sep 2020

SKILLS

- **Cloud Platforms:** AWS (EC2, S3, VPC, IAM), Azure (VMs, ExpressRoute, Data Lake)
- **Virtualization Technologies:** VMware vSphere/ESXi, Hyper-V, Citrix XenApp/XenDesktop
- **Networking:** VPN (IPsec, SSL), FortiGate, Palo Alto, Cisco ISR, VLAN, BGP, OSPF, DNS, DHCP, TCP/IP, F5 BIG-IP, NGINX
- **Automation & Scripting:** PowerShell, Ansible, Terraform, Bash
- **Monitoring Tools:** Nagios, Zabbix, SolarWinds, Splunk, QRadar
- **Backup & Recovery Tools:** Veeam, Acronis, Backup Exec
- **Database Technologies:** SQL Server, MySQL, MongoDB
- **Other Tools & Technologies:** Office 365, FTP/FTPS Servers, LDAP, NFS, Printer Management, Active Directory
- **Ticketing Tools:** ServiceNow, Remedy, Jira
- **Operating Systems:** Windows Server, Linux (Ubuntu, RHEL, CentOS), Windows

PROFESSIONAL EXPERIENCE

Raymond James, CT, USA

System Administrator

Feb 2024 - Current • Administered 150+ Linux servers (Ubuntu, CentOS), focusing on performance optimization, high availability (HA), and proactive troubleshooting using Nagios, Prometheus, and Zabbix for real-time monitoring, log aggregation (ELK stack), and issue resolution.

- Ensured scalability and fault tolerance by configuring VMware ESXi, vCenter, and managing AWS EC2 instances, applying auto-scaling policies, and integrating Elastic Load Balancers (ELB) for seamless application delivery.
- Configured BGP, OSPF, and VXLAN routing protocols to optimize data flow between on-premise and cloud infrastructure, ensuring secure and efficient communication in hybrid cloud environments.
- Configured iptables and firewalld for advanced firewall management, enforcing traffic filtering, NAT policies, and network segmentation to bolster internal network security and reduce unauthorized access.
- Deployed and maintained LAMP stack (Linux, Apache, MySQL, PHP), optimizing database performance through indexing, query caching, and slow query logs, while ensuring secure communication with SSL certificates.
- Automated cloud operations using AWS CLI and CloudFormation, managing EC2 instances for workload scaling, disaster recovery, and high availability across critical production environments.
- Managed and optimized NFS file systems across Linux servers to enable high-speed data access, configuring rsync-based backup systems and integrating AWS S3 for cloud storage.
- Configured and maintained OpenVPN and IPsec VPN solutions to provide secure site-to-site and remote access VPN tunnels, ensuring data integrity and encryption.
- Managed incident tickets and resolved system issues through ServiceNow, collaborating with cross-functional teams to perform root cause analysis (RCA), ensure service recovery, and improve uptime.

Resolve Tech Solutions, Hyderabad India

System Administrator

Sep 2020 - Aug 2022 • Administered Linux systems (RedHat, CentOS) in high-uptime environments, troubleshooting performance issues, managing system updates, and applying security patches to ensure reliability.

- Deployed virtual machines using VMware vSphere and ESXi, maintaining consistent configurations across test, staging, and production environments using VM snapshots for backup and recovery.
- Optimized network routing using BGP, OSPF, and VXLAN, improving data flow efficiency and network resilience between internal networks and cloud platforms.
- Configured IPsec VPN for secure communication between on-premise and cloud environments, managing routing policies to ensure optimized data traffic and secure connections.
- Set up and maintained a Zabbix-based monitoring system to track server health and performance metrics, proactively addressing issues before they impacted user experience and optimizing system resources.

- Developed Ansible playbooks to automate server configurations, streamlining deployment processes and minimizing manual intervention across environments.
- Deployed scalable cloud-based services using AWS EC2, S3, and CloudWatch, ensuring continuous application availability and dynamic resource scaling with auto-scaling policies.
- Utilized Jira for change management and incident tracking, coordinating with development and infrastructure teams to schedule system updates and minimize production disruptions.
