M.S in Computer Science - Seattle University (GPA: 3.97/4.0)

Seattle, WA, March 2023

B.S in Computer Science - The University of Texas at Austin

Austin, TX, May 2017

Work Experience

Full time - Clothing Tech LLC - Software Developer (Jan. 2023 —Aug. 2024)

Austin, Texas

- Designed and implemented various functionalities and APIs for garment construction team in the Fashioner application.
- Collaborated across different teams to improve the previous garment construction algorithm speed and documentation.
- Improved accuracy by adding more unit tests and integration tests to achieve close to a hundred percent coverage.

Fashioner Application

Jan. 2023 - Aug. 2024

- Designed and Implemented features for users to add various trims and finishes to garment patterns.
- Refactored the circumference calculation algorithm and improved the calculation speed and accuracy.
- Introduced parameterized testing and reduced more than half of the code base in the unit test classes.

Full time - ElecNest Technology LLC - JAVA Backend Developer (Mar. 2020 — Aug 2021)

Shenzhen, China

- Integrated new platform with existing platforms that allows previous users to sign on without registering a new account.
- Designed and implemented the auto grading process for student's homework on the new platform.
- Lead a team of three to improve the software development cycle by adding project task tracking and CI/CD pipeline.

Auto Grading System

Apr. 2021 - Aug. 2021

- Automatically grading different types of homework submitted from students on the web platform.
- Implemented the notification system to notify students and teachers when grading is done.
- Saved over fifteen hours each week for all teachers on the team from manually grading homework.

Single-Point Sign On

May. 2020 - Dec. 2020

- Allowed previous users from existing platforms to sign on to the new platform without registering a new account.
- Achieved Single Point Sign On between all web applications within the company and integrated under one domain.

Full time - Plymouth Rock Energy - Software Engineer (Sept. 2017 --- Sept. 2019)

Oak Park, Michigan

- Created Internal application tools for admins to manipulate data stored in SQL database.
- Designed and Implemented API for automatically retrieving and processing customer's utility usage data.
- Refactored existing code base and created PRE-Library for all tech teams to use within the company.

Web Data Retrieval

Oct. 2018 - Sep. 2019

- Re-designed the old software application's code base using the new best practices with a team.
- Retrieved data from various government websites and converted them into a consistent readable format.
- Implemented Error Logging with email notification as the new feature to ensure the process is reliable.

Save my Rate

Mar. 2018 - Sep. 2018

- Created RESTful APIs on Salesforce for users to store quoting price of our product for a limited time.
- Allowed users to retrieve back to our website for the same quoting price by sending a link to their emails.
- Resulted in a more than ten percent increase in the number of newly joined customers.
