PROFESSIONAL EXPERIENCE

Technology Lead, Infosys | Richardson, Texas, USA

September 2024 – Present

Lead Dotnet Developer

- Designed and developed web applications using ASP.NET MVC and .NET Core, delivering modular and scalable solutions
- Leveraged advanced C# capabilities, such as asynchronous programming and multithreading using async/await, TPL and Synchronization context to build scalable, high-performance applications
- Implemented Entity Framework Core in .NET Core to streamline database access and operations, utilizing LINQ for efficient querying, optimizing data retrieval with lazy and eager loading strategies
- Utilized JSON as the primary data format for client-server communication, implementing efficient serialization and deserialization techniques ensuring standardized data exchange, reduced payload size, and optimal performance
- Administered and optimized SQL databases with Microsoft SQL Server, employing indexing, partitioning, and query optimization techniques to enhance performance, ensuring reliable data storage, high availability, and efficient query execution
- Implemented Apache Kafka as a distributed message queue for real-time data streaming and processing, leveraging its fault-tolerant architecture to enhance scalability, improve throughput, and ensure reliable, asynchronous data handling
- Utilized front-end technologies such as Angular, TypeScript, HTML, CSS, JavaScript, and Bootstrap to develop dynamic, responsive, and interactive user interfaces, , two-way data binding, and modular design to improve user experience
- Leveraged Git and Bitbucket for version control, efficiently managing codebase changes, coordinating team contributions through branching and pull requests, and ensuring a clean, organized, and well-documented code repository
- Employed integration testing tools like Postman and Swagger UI to thoroughly test and validate APIs, ensuring robust, reliable, and web services by executing automated tests, validating endpoints, and verifying response accuracy
- Facilitated code reviews and pair programming sessions to uphold high code quality standards, foster knowledge sharing within the team, and collaboratively address potential issues, ensuring adherence to best practices and continuous improvement
- Collaborated with cross-functional teams, including QA, DevOps, and Product Management, to ensure alignment on project goals, streamline development processes, and address integration challenges, facilitating effective communication
- Implemented logging with Serilog to capture and analyze application logs, integrating with Elasticsearch for scalable log storage and search capabilities. Utilized Kibana to visualize and analyze logs, enabling easier debugging

IT Analyst, Tata Consultancy Services

July 2016 – July 2022

Dotnet Developer/ Angular Developer

- Engineered robust web applications utilizing C# and .NET MVC for backend development, SQL for database management, and Angular with TypeScript for the frontend, all within a test-driven development (TDD) environment to ensure high code quality, maintainability
- Proficient in Agile methodologies including Scrum and Kanban, utilizing Jira for sprint planning, backlog management, team collaboration and Confluence for storing project documentation
- Extensive experience in developing Angular applications using TypeScript, ensuring type safety and improved maintainability of code and followed coding standards
- Implemented advanced features such as decorators, generics, and interfaces to enhance the clarity and extensibility of the codebase along with the ngrx observables to subscribe to asynchronous variables
- Configured Nginx as a reverse proxy to manage server load, environments and enhance application security and performance
- Integrated code coverage reporting into CI/CD pipelines such as Jenkins, enabling continuous monitoring and improvement of code quality and maintenance with the help of logs
- Applied Lazy Loading techniques to load feature modules on demand, significantly reducing initial load time and enhancing user experience
- Created and executed unit tests using JUnit and Karma to validate new features and maintained good code coverage
- Received Star of the Month award appreciation for solving historical defects proactively with strong problem solving and analytical skills
- Provided production support for COW bugfixes, ensuring seamless operation and prompt resolution of issues

Dotnet Developer

- Applied SOLID principles in software design, ensuring scalability and maintainability by employing Single Responsibility, Open-Closed, Liskov Substitution, Interface Segregation, and Dependency Inversion principles, enhancing code quality and facilitating easier debugging
- Built and maintained robust server-side applications with C# .NET, incorporating RESTful APIs and adhering to MVC Architecture
- Utilized data binding techniques in Angular and C# .NET to enhance user experience and ensure data integrity
- Developed and maintained data-driven applications using Entity Framework in ASP.NET MVC with C# to write LINQ queries
- Optimized query performance by migrating code from LINQ to SQL stored procedures, ensuring efficient filtering of query conditions
- Implemented Controller, Manager, Repository patterns for structured application architecture, utilizing mapper classes for data mapping

Dotnet Developer

- Proficient in semantic HTML markup, CSS Flexbox/Grid layouts, responsive design jQuery integration for visually appealing web pages
- Implemented responsive web design principles to ensure adaptation across diverse devices, minimizing rendering of off-screen elements
- Utilized AJAX in JavaScript to perform HTTP requests for asynchronous data retrieval, integrating JSON data handling
- Implemented Kendo UI for calendars for scheduling and utilized Moment.js for date manipulation for Maestro Sandbox Application
- Utilized Knockout.js using the MVVM pattern for efficient data binding and enhanced front-end development
- Engineered SQL stored procedures to meet specific client requirements, streamlining data retrieval and increasing efficiency by 15%
- Implemented batch processing solutions using cron jobs to automate tasks and triggers for logging events, ensuring efficient data processing

PROJECT EXPERIENCE

React Developer Redux state management and Express.js for backend | SUNY Binghamton January 2024 – May 2024

- Developed dynamic and interactive user interfaces using React.js with components and React Hooks (useState, useEffect, useContext)
- Implemented Redux for robust state management using reducers, store and actions. Express.js to consume custom third part API's

Dot Net Developer Intern, New Energy New York Initiative (Research Foundation) | NY, USA December 2023 – May 2024

- Demonstrated expertise in developing web applications using Dot Net, with a strong understanding of Dot Net concepts
- Proficient in database design, implementation, management using relational databases such as MySQL, PostgreSQL or NoSQL like MongoDB
- Designed and implemented a robust data stack leveraging Airflow for orchestration, Airbyte for data ingestion, dbt for transformation, and
- PostgreSQL/Snowflake for storage, enabling efficient data pipeline management, seamless integration, and advanced analytics capabilities
- Built RESTful APIs with Node.js integrating seamlessly with Angular front-end to facilitate efficient data exchange and application functionality
- Deployed Angular applications to cloud platforms using AWS APP Runner ECR, leveraging CI/CD pipelines like Jenkins and Docker containers

Software Machine Learning Engineer, Hand Text Recognition from Image | SUNY Binghamton August 2023 – December 2023

- Implemented Handwritten Text Recognition system by using advanced computer vision techniques and machine learning algorithms
- Conducted comprehensive data analysis to understand the requirements of integrating machine learning models into an ReactJSWeb app

Software Data Engineer Project, Hate Speech Detection | SUNY Binghamton January 2023 – December 2023

- Conducted a comprehensive analysis of the existing models, employing Python libraries such as scikit-learn, Pandas and NumPy
- Leveraged scikit-learn for classification and regression, while harnessing deep learning with TensorFlow for complex projects

EDUCATION

Binghamton University, State University of New York, Thomas J. Watson College of Engineering and Applied Science

Master of Science in Computer Science (Artificial Intelligence Track) | GPA: 3.7/4.0

August 2022 - May 2024

G Pulla Reddy Engineering College, India

Bachelor of Technology in Information Technology

October 2012 -May 2016

TECHNICAL SKILLS

Languages: C#, Python, SQL, Java, C++, C, javascript, typescript

Tools: Visual Studio Code, Visual Studio, Git, Linux, MongoDB, Jenkins, JIRA, Confluence, MS Office, PyCharm, Jupyter notebook

Web Technologies: HTML, CSS, JavaScript, Angular, Jquery, ReactJS, AngularJS, KnockoutJS, KendoJS, SASS, REST

Cloud and server Technologies: AWS APP Runner, Microsoft Azure App Services, Docker, Apache AirFlow, MLOps, Postman, Swagger

Certifications: Python Programming (Kaggle), Automate simple things with Python (Udemy)
