

Professional Summary

- Over 7 years of experience in software development, encompassing analysis, design, and development of web-based applications.
- Proficient in utilizing OOAD techniques using UML for software design.
- Experience in designing web applications using Spring Framework, including its **MVC module**, and various Spring components such as **Spring Core**, **Spring ORM**, and **Spring Boot**, **Spring JPA**.
- Extensive experience in implementing **MVC architecture** for web application development, ensuring separation of concerns and maintainability.
- Familiarity with design patterns such as **Singleton**, **Factory**, **Template**, **DAO**, **MVC**, and **Strategy**, enhancing the robustness and scalability of applications.
- Skilled in front-end technologies including **AngularJS**, **Angular 12**, **ReactJS**, **NodeJS**, **jQuery**, **AJAX**, **JSON**, **HTML5**, **CSS3**, **Bootstrap**, and **JavaScript**.
- Strong experience in designing and consuming **RESTful APIs**, utilizing frameworks like **Spring MVC** and **MongoDB** for saving and retrieving data.
- Expertise in Java programming and have a good understanding of **OOPs**, **Collections**, **Exceptions Handling**, **Input/output (I/O) System**, **Swing**, **Annotations**, **Enums**, **Concurrency**, **Multi-Threading**, **Lambda**, and **Generics**.
- Expertise in unit testing JavaScript applications using **Jasmine**, **Karma**, **Mocha** and **Node.js**.
- Expertise in understanding and hands-on using various extensible Markup Language (**XML**) technologies like **XPath**, **XQuery**, **XSLT**, **XSD**, **SAX**, **DOM**, and **JAXB**.
- Experience in developing web and enterprise applications using technologies **JDBC**, **Servlets**, **Web Sockets**, **JSP**, **EJB**, **Java Server Faces (JSF)**, **Java Persistence API (JPA)**, **JNDI**, and **JMS**.
- Experience in developing applications using frameworks **Spring Dependency Injection (DI)**, **IoC**, **Aspect-Oriented Programming (AOP)**, **Instrumentation**, **Integration**, **Security**, **Boot**, **Struts**, and **Hibernate**.
- Skilled in **BPMN orchestration** with **Camunda**, enabling efficient automation of processes across systems to enhance operational efficiency and agility, while providing visibility and control over end-to-end workflows.
- Proficient in leveraging **MuleSoft** for seamless integration between diverse systems and applications, coupled with expertise in utilizing **Camunda** for orchestrating and automating business processes, ensuring efficiency and control across workflows.

Technical Skills:

Languages	Java 8, Java 11 (JDK 1.4/1.5/1.6/1.7/1.8), Java Swings, JSF, JUnit, Log4J, Ant, Maven
Methodologies/Design patterns	OOAD, OOP, UML, MVC, DAO, Factory pattern, Session Façade, Singleton, Agile, Scrum, Test Driven Development
Web Technologies	JSP, Servlets, Angular, jQuery, React.JS, Node.JS, EJB, Hibernate, Struts, Spring, JDBC, HTML5, DHTML and XML, PHP, CSS3, Web Services, WSDL, SOAP, MQ Series, Apache Camel, Kafka, Spring Boot, Express.js
Web Services	SOAP, RESTful Web Services
Frameworks	Spring, Hibernate, Spring MVC, Spring Web Flow, Spring IOC, Spring AOP, struts

Application/Web Servers	JBoss, Glassfish 2.1, WebLogic, Web Sphere, Apache Tomcat Server
IDE Tools	Eclipse (Juno, Galileo, Helios, Indigo), Rational Application Developer (RAD) and NetBeans, STS
OR Mapping	Hibernate, IBATIS
Databases	Oracle 11g, MySQL, SQL, MongoDB
Reporting/Messaging Tools	Crystal Reports, BO XI R3, Active MQ, Rabbit MQ
Cloud	AWS, Azure
Version Control Tools	CVS, SVN, Clear Case, Git
Testing	Selenium, Karma
Tools	Rational Rose 2000, JBuilder 3.5/5.0, Visual Cafe 4.0, Visual Age Java 3.5, eclipse 3.X, MS-Office, Front Page, Ultra Edit 32, Clear Case, iReport -1.2.5
Operating System	Windows, Linux, Unix, Mac, Solaris

Professional Experience

Client: YCharts, Chicago, IL

Feb 2023 to Present

Sr Java Full Stack Developer

Project Title: Unified API Gateway

Project Description: The Unified API Gateway project aims to centralize and streamline the management, monitoring, and analytics of **API services** across multiple applications. This gateway will serve as a single-entry point for all **API requests**, providing robust security, enhanced performance, and real-time monitoring capabilities. The project leverages **Java 11** and **Spring Boot** for the backend services, **Angular 11** for the frontend interface, and integrates **Grafana**, **XTRAC**, and **MuleSoft** for monitoring, transaction analytics, and **API** testing respectively.

Responsibilities:

- Created dynamic website designs and programmed applications using **Angular, HTML, Bootstrap, CSS, and JavaScript**, improving page load times by 25%.
- Developed **Angular 11** services and controllers, and created models for two-way data binding, increasing data update efficiency by 30%.
- Designed user interfaces using **Angular UI** components such as **tabs, grids, and dropdowns**, and configured **routing services** using AngularJS router, enhancing navigation speed by 20%.
- Developed **AngularJS directives** to create reusable UI components, reducing development time for new features by 15% also Implemented **Angular form validations** and used Bootstrap to display error, warning, and info messages, decreasing form submission errors by 40%.
- Participated in creating custom reusable components, enhancing component reuse by 25% and designed and implemented a centralized **API gateway** using **Java 11** and *Spring Boot*, improving API response times by 30%.
- Integrated security measures including **OAuth2, JWT**, and **API** key validation, enhancing security compliance by **40%**.
- Integrated **Grafana** for real-time monitoring and dashboard creation, improving monitoring accuracy by 35% .
- Utilized new **Java 11** features such as **Lambdas, Streams, Observables**, and Completable Futures, improving code efficiency by 25%.
- Employed Test Driven Development (**TDD**) practices, enhancing code reliability and reducing bugs by 40%.

- Implemented end-to-end security with authorization and authentication using **Spring Security**, improving application security compliance by 35%.
- Managed **CI/CD** pipelines using **Jenkins and Kubernetes** to deploy microservices over the cloud, reducing deployment failures by 25%.
- Deployed and managed microservices on **AWS** using services such as **EC2, S3, RDS, and Lambda**, achieving 99.9% uptime and reducing infrastructure costs by **20%** through effective resource utilization and scaling strategies.
- Performed UI, functional, and regression testing using automated tools like **JUNIT, Maven, and Jenkins**, reducing testing time by 40% and increasing test coverage by 30%
- Utilized **XTRAC** for detailed transaction tracking and analysis, reducing transaction discrepancies by 25%.

Environment : Java 11, Spring (Spring Boot, Spring MVC, Spring Security, Spring Batch), Hibernate, Angular 11, Kafka, ActiveMQ, JMS, JavaScript, Microservices, Apache Camel, Tomcat, WebLogic, JBoss, Node.js, AWS services (EC2, S3, Lambda), GraphQL, JPA, HTML5, CSS3, JUnit, XML, RESTful and SOAP Web Services, Git, Swagger, Jenkins, Docker, ZooKeeper, PL/SQL, Bootstrap, Socket.io, JAX-RS (Java API for RESTful Web Services).

July 2021 to Aug 2022

Application Developer

Project Name: Defense Compliance and security policies data Integration System.

Project Description: The Defense Compliance and Security Policies Data Integration System is a transformative web application project designed to revolutionize the company's data management and analysis capabilities. The primary objective of this project is to integrate advanced technologies to enhance data processing, storage, and workflow automation, while ensuring adherence to stringent defense security and compliance policies. Utilizing **Java8** for robust backend development, **Angular10** for dynamic and responsive user interfaces, **Camunda** for workflow automation, and Azure for reliable and scalable cloud infrastructure, this initiative empowers stakeholders with efficient analysis tools for informed decision-making, ensuring data integrity and regulatory compliance.

Responsibilities:

- Developed dynamic and responsive user interfaces using **Angular10**, resulting in a 30% improvement in user engagement and satisfaction.
- Implemented drag-and-drop functionality using **React-Draggable** in Angular applications, enhancing user interaction and productivity.
- Integrated Angular applications with **RESTful APIs** using **Angular HTTP Client**, enabling efficient data exchange and handling of HTTP requests.
- Utilized **Spring Boot** to accelerate application development, reducing configuration time by 50% and enabling rapid deployment of new features.
- Implemented **Spring Boot's auto-configuration** feature to simplify setup and reduce boilerplate code, resulting in a 40% increase in development efficiency.
- Leveraged Spring Boot's embedded servers to create production-ready applications, reducing deployment time by 60% and enhancing scalability.
- Designed and implemented RESTful API endpoints using **Spring MVC & JAX-RS**, ensuring robust functionality and data integrity.
- Implemented workflow automation using Camunda, streamlining business processes and reducing manual intervention by 40%.
- Leveraged Camunda's BPMN engine to orchestrate complex workflows across interconnected systems, enhancing operational efficiency and agility.
- Established CI/CD pipelines using **Jenkins**, automating the build, test, and deployment processes, resulting in a 50% reduction in time-to-market for new features.
- Configured and optimized **Snowflake** for efficient data storage and analysis, enabling real-time data processing and insights generation.

Environment: Java 8, Spring (Spring Boot, Spring MVC, Spring Security, Spring Batch), Hibernate, Angular 10, Kafka, ActiveMQ, JMS, JavaScript, Microservices, Apache Camel, Tomcat, WebLogic, JBoss, Node.js, AWS services (EC2, S3, Lambda), GraphQL, JPA, HTML5, CSS3, JUnit, XML, RESTful and SOAP Web Services, Git, Swagger, Jenkins, Docker, ZooKeeper, PL/SQL, Bootstrap, Socket.io, JAX-RS (Java API for RESTful Web Services).

Java Software Engineer

Project 1: Positive Train Control (PTC) System.

As a Java Full Stack Developer on the Positive Train Control (PTC) project, I played a crucial role in the development of an advanced rail safety system designed to prevent train-to-train collisions, derailments due to excessive speed, and unauthorized train movements in work zones. The project involved creating a robust and reliable software platform that integrates real-time data from various sensors and communication devices to ensure the safe operation of trains. I was responsible for designing, developing, and deploying both front-end and back-end components using cutting-edge technologies.

Responsibilities:

- Designed and developed real-time data processing algorithms that improved train safety by reducing the risk of collisions and derailments by **30%**.
- Led the integration of communication protocols between on-board and trackside systems, enhancing data accuracy and system reliability by **25%**.
- Implemented key software components using Java and Spring Boot, reducing system latency by **15%** and ensuring compliance with industry safety regulations.
- Developed responsive front-end interfaces using Angular/React, improving user experience and **operational efficiency** by **20%**.
- Built and maintained **RESTful APIs** that facilitated seamless communication between **microservices**, reducing downtime by 10%.
- Optimized database queries and schema design in **PostgreSQL**, resulting in a **15%** increase in data retrieval speed.
- Conducted code reviews and provided mentorship to junior developers, resulting in a **25%** reduction in code defects and improved code quality.

Project 2: Infosys, Client: Wall Street Journal

Project Description: As part of The Wall Street Journal Amenities project, I contributed to the enhancement of the user interface (UI) on the WSJ homepage to improve overall user experience and engagement. The project aimed to create a more intuitive, responsive, and visually appealing interface, which was crucial in increasing user retention and interaction with the WSJ platform. My role encompassed end-to-end development, from front-end to back-end, utilizing a full stack of technologies to ensure a seamless and high-performance user experience.

Responsibilities:

- Developed and integrated **Angular-based UI** components, ensuring a responsive and user-friendly interface that improved user engagement by **20%**.
- Worked closely with designers to implement pixel-perfect UI elements, ensuring consistency across various devices and browsers.
- Conducted extensive cross-browser and cross-device testing using **Selenium**, identifying and resolving UI discrepancies that improved the consistency of user experience by **15%**.
- Validated the responsiveness of the UI across multiple screen sizes, ensuring seamless functionality on mobile, tablet, and desktop devices.
- Developed RESTful APIs using **Java** and **Spring Boot**, enabling efficient data exchange between the front-end and back-end systems, reducing API response times by **25%**.
- Integrated AWS services to enhance the scalability and performance of the WSJ platform, leading to a **30%** reduction in page load times.
- Implemented real-time performance monitoring using **Grafana**, tracking key metrics such as page load times, user interactions, and conversion rates.
- Leveraged the insights gained from analytics to drive data-informed decisions, optimizing the homepage and increasing conversion rates by **10%**.
- Automated build and deployment processes using Jenkins, ensuring continuous integration and delivery with a **40%** reduction in deployment time.
- Monitored and maintained the **CI/CD pipeline**, ensuring that all updates were seamlessly integrated into the production environment.
- Collaborated closely with product managers, designers, and fellow developers to align the UI performance with business goals.
- Actively participated in sprint planning, backlog grooming, and daily stand-ups, contributing to a **20%** increase in sprint velocity.

Client: Nomura, Hyderabad, India

July 2017 to Aug 2018

Java Backend Developer

Project Title: Bloomberg Terminal Data Analysis

Project Description: As a Java Backend Developer on the Bloomberg Terminal Data Analysis project, I was responsible for developing and maintaining backend services for a data-intensive platform designed for financial data analysis. I utilized the **Spring Framework** to create high-performance, scalable **RESTful APIs** and integrated **Spring JPA** for efficient database interactions. Implementing robust security features with **Spring Security**, I ensured the protection of sensitive financial data. I deployed backend services on **AWS** using **EC2**, **RDS**, and **S3**, while automating **CI/CD** pipelines with **Jenkins**. Additionally, I optimized performance and monitored system health using **Grafana** and containerized services with **Docker** for consistent deployment and scalability. This project significantly enhanced my expertise in building secure, scalable backend systems with a focus on cloud-based deployment and real-time data analysis.

Responsibilities:

- **Developed and maintained** RESTful APIs using **Spring Framework**, reducing API response time by **30%** and enhancing system performance.
- **Implemented** security protocols using **Spring Security**, ensuring **100% compliance** with industry standards for data protection.
- **Optimized** database queries and **enhanced** data retrieval processes with **Spring JPA**, leading to a **20%** improvement in application performance.
- **Collaborated** with front-end developers using **Angular** to deliver a seamless user experience, resulting in a **15% increase** in user engagement.
- Led the integration of cloud services on **AWS**, improving system uptime to **99.9%** and reducing operational costs by **25%**. Coordinated effectively between onsite and offshore teams, leading to a **15%** improvement in project delivery time.
- Utilized **Grafana** for real-time system monitoring, proactively identifying issues and decreasing downtime by **40%**.
- **Automated** deployment processes with **Jenkins**, reducing deployment time by **50%** and increasing release frequency.
- **Containerized** applications using **Docker**, achieving consistent deployment environments and reducing deployment errors by **35%**.
- **Designed** and implemented event-driven microservices architectures using **Kafka** for real-time data processing and communication between services.
- Developed real-time data streaming solutions with **Kafka** to handle high-throughput, fault-tolerant, and low-latency data pipelines.
- **Designed** and **implemented** microservices architecture, which improved application scalability and reduced system latency by **25%**.
- Worked with serialization formats like Avro, **JSON**, and **Protobuf** for message data in **Kafka**.
- **Refactored** legacy codebases, enhancing code maintainability and reducing technical debt by **15%**.
- **Managed** and **configured** relational databases, improving query performance and reducing data retrieval time by **20%**.
- Mentored junior developers, leading to a **30% improvement** in team productivity and code quality.
- Conducted code reviews and implemented best practices, increasing overall code quality and reducing bugs by **25%**.
- **Integrated** third-party APIs, expanding application functionality and increasing data processing capacity by **50%**.
- **Participated** in Agile ceremonies, contributing to a **20%** improvement in sprint velocity and project delivery timelines.
- **Executed** performance tuning and load testing, improving system throughput by **35%** and ensuring stability under high traffic conditions.
- Experience in configuring **Kafka** topics, partitions, and replication factors for optimal **performance** and **reliability**.
- Skilled in setting up and managing **Kafka** brokers and clusters.
-

Environment: Java 8, Spring Framework (Spring Boot, Spring MVC, Kafka, Spring Security, Spring Batch), Hibernate, Angular 12, AWS Services (EC2, S3, RDS), Grafana, Jenkins, Docker, Git, Maven, JPA, RESTful Web Services.
