Full Stack Development | Java | HTML | JavaScript | Spring Boot | Hibernate | Application Security | Angular | React |
Bootstrap UI | AWS | Spring Boot | Micro Services | Product Development

PROFESSIONAL SUMMARY:

- More than 6 years of experience in Object Oriented **Designing, Developing, Implementation** and **testing** in Client/Servers e-business applications using **Java&J2EE** Technologies.
- Expert in Various Agile methodologies like **SCRUM, Test Driven Development (TTD)**, Incremental and Iteration methodology, **Agile Development & Testing** using **Software Development Life Cycle**.
- Experienced in developing, Testing, and deploying enterprise applications on **Windows, Linux, and UNIX** platforms using **IDEs** such as **Eclipse, STS, and IntelliJ 14.x/15. x**.
- Expertise in **design patterns** including Data Access Object, Session, Business Delegate, Data Transfer Object, and Singleton.
- Good Knowledge of developing **UI pages** from scratch using **HTML5, CSS3, JavaScript, jQuery, AJAX, Angular JS and React JS**.
- Extensive work experience using Web Services (**REST, SOAP**) and **Service-Oriented Architecture**.
- Strong experience in Spring Framework modules such as **Spring MVC, IOC, AOP, JDBC, JTA, IO, ORM, Spring Dashboard, Spring Boot, Spring Microservices, Spring REST and Spring**.
- Expertise in developing **front-end** systems with **JavaScript, Bootstrap, HTML5**, and **MVC** frameworks such as **Angular JS, React JS**.
- Worked with **Docker** and **Kubernetes** on multiple cloud providers, from helping developers build and containerize their application (**CI/CD**) **pipelines** to deploying either on a public or private cloud.
- Developed applications using the latest technologies like **Spring 4.0/5.0, Spring Boot, Hibernate, and REST-based Web services (Axis2.0, JAX WS 2.0, JAX RS)**.
- Experience in working on **Maven, Gradle, and Ant** for project build and logging tools such as **Log4J2** and **Splunk**.
- Experience with version control tools such as **GIT, SVN, and CVS**.
- Experience in **design architecture** and **development** of batch jobs using **Quartz** and **Spring batch**.
- Experienced in performing unit testing using **Selenium, Cucumber, JUnit, Mockito, Mock MVC, JMeter, and J-Test**.
- Configured & deployed Java applications on **Amazon Web Services (AWS)** for a multitude of applications utilizing the **AWS stack, and cloud formation**.
- Experience in **creating Docker images, Containers, push/pull, and integrating** with **Spring Boot**.
- Expertise in designing and developing various web and enterprise-level applications using **Java/J2EE** technologies using **Core Java, Servlets, JDBC, JSP, Hibernate, Spring, and Web Services**.
- Developed single-page applications using **React.js, Typescript, Declarative User Interface, and POJO**.
- Experienced in Middleware persistence frameworks like **Hibernate/JPA** Entities for **mapping Java classes** using **Hibernate Query Language (HQL), HSQL Named Queries, Criteria, and Projections**.
- Good experience with **SOA architecture** and web services (**SOAP, WSDL, UDDI**) using **Apache Axis2** and **RESTful web services** in Java with **JAX-RS** reference implementation **Jersey**.
- Proficient in using **Amazon Web Services AWS**.
- Configured **AWS Identity and Access Management (IAM)** Groups and Users for improved **login authentication**.
- Experience in **configuring** and **deploying** the applications into **Tomcat, WebSphere, WebLogic, and JBoss** Servers.

TECHNICAL OVERVIEW:

Languages	Java, SQL, PL/SQL, C, C++
J2EE Technologies	JSP, Servlets, EJB, Servlets, JSTL, JDBC, JMS, JPA JNDI, RMI, EJB, Java Beans, Multi-threading, Java Networking, Spring data, Spring Boot, Spring framework, Spring JDBC Templates, Hibernate, Web Services, SOAP, RESTFUL
Frameworks	Struts, Spring, JSF, Hibernate, Angular, React
IDE's	Eclipse, WebSphere Application Development Studio 5.1, NetBeans, IntelliJ, STS 4
Databases	Oracle, SQL Server, MySQL, MongoDB
Source Control	Clear Case, CVS, Subversion, GitHub, ClearCase, Tortoise CVS, Win CVS
Testing & Build Tools	Ant, Maven, JUnit, JIRA, Ant, Gradle, NPM, Grunt, Jenkins.
Operating Systems	Windows, Linux, Unix
Application Servers	Web Logic 7.1/8.1, Glassfish 4.0, Apache Tomcat Server, IBM Web Sphere Application Server 5.0,
DevOps Tools	Docker, Kubernetes, Amazon Web Services (EC2), Jenkins
Cloud	AWS (SQS, SNS, RDS)
Testing tools	JUnit, JMeter, Selenium, Cucumber, Mockito, Karma, Jasmine, IBM MQ, Rabbit MQ

PROFESSIONAL EXPERIENCES:

Client: Department of Labor Atlanta/GA.

Duration: August 2017 - Present

Role: Java Full stack Developer

Project Description: Actively involved in web application development and production support for the project SCUBI (Southern Eastern Consortium Unemployment Benefits Integration) which is used by the staff of labor departments and customers for claiming their own claims under critical circumstances. This is a common application for North Carolina, South Carolina.

Key Responsibilities:

- As a Java developer involved in back-end and front-end developing team. Took part in developing, maintaining, reviewing, and supporting quality code and services.
- Developed Web interface using JavaScript, ReactJs, HTML, CSS, AJAX, and Bootstrap.
- Called Rest web services through React JS services to get JSON Object and modified the response object to display in UI.
- Used spring Framework for implementing business logic and maintaining transactions.
- Used Spring framework including Spring core/IOC, Spring Batch, Spring Boot, Spring Security, Spring ORM, and Spring AOP modules.
- Design and Development of the system workflow. Used Singleton, Spring MVC, Hibernate, Factory Pattern and DAO design patterns.
- Designed and implemented Hibernate Annotation-based persistence layer for backend.
- Prepared User stories corresponding to the features taken from Backlog.

- Used advanced Java 8 features like Lambda expressions for array operations, Streams, Method references, and collections. Enhanced concurrency methods etc. throughout the application for well-defined programming.
- Developed business layer using Spring, Hibernate and DAO's.
- Involved in writing Hibernate mapping files (HBM files) and generating hibernate POJOS and wrote various Hibernate Queries using Hibernate Query Language and native SQL Queries.
- Used HQL and SQL as the query languages in Hibernate Mapping. Integrated the Spring and Hibernate framework.
- Used Hibernate as persistence Layer - using the database and configuration data to provide persistence services (and persistent objects) to the application.
- Implemented log4j for debugging. Utilized the same for logging each sensible data access from the application.
- Installed application on AWS EC2 instances and configured the storage on S3 buckets.
- Developed Microservices using RESTful web services to provide all the CRUD capabilities.
- Responsible for developing the sequential and conditional batch jobs using the Spring batch framework.
- Implemented CI/CD with Jenkins, AWS: Code Deploy, Ops Works for the deployment of Java Applications.
- Experienced in building and deploying multi-module applications using Maven and CI servers like Jenkins.
- Deployed Production-ready Java applications using Elastic Beanstalk, which auto-configures the capacity provisioning through Autoscaling, load balancing, application health monitoring, and Proficiency in using Amazon Web Services AWS.
- Configured AWS Identity and Access Management (IAM) Groups and Users login authentication.
- Designed and developed a spring batch-based system to process huge transactions.
- Applied significant knowledge of industry trends and developments to improve service to our clients.
- Used Multithreading extensively to improve the performance of the application.
- Involved in capturing the business requirements, design, development, and testing of the application.
- Deployed Docker-contained Spring REST services into AWS EC2 container service using AWS admin console and used lambda to run applications in AWS console.
- Used Amazon Web Services (AWS) like EC2, S3, and Elastic Search.
- Experience with building Docker Images and running them on Docker containers.
- Used Docker to implement a high-level API to provide lightweight containers that run processes in isolation and worked on the creation of customized Docker container images.

Environment: HTML5, CSS3, JavaScript, jQuery, AJAX, Spring Batch, JSON, Jenkins, GIT, Agile, REST, log4j2, Hudson, Spring MVC, Spring Framework, Spring Boot (Microservices), Active MQ, Docker, JAX-RS, JUnit, Mockito, STS 4, Gradle, Swagger, Oracle, SOAPUI, Postman, Ec2, AWS lambda, Hibernate.

Client: Noble Americas, Stamford, CT

Duration: Jan 2017 – Jul 2017

Role: Java Full stack Developer

Project Description: Noble Americas is a company which produces gas and power it offers supply of electricity, enabling clients to avail smooth supply of power and gas products. Working on creating and maintaining automation and control systems software using JAVA technologies.

Key Responsibilities:

- Followed Agile Methodology to analyze, define, and document the application which will support functional and business requirements.
- Involved in various phases of Software Development Life Cycle (SDLC) of the application like Requirement gathering, Design, Analysis and Code development.
- Developed java modules implementing business rules and workflows using Spring MVC, IoC, Web Framework.
- Had experience in performance tuning J2EE apps, performance testing, analysis, and tuning.
- Responsible for creating and enhancing the UI using HTML5, CSS, JavaScript, Bootstrap, JSP and Angular.
- Actively participated in the daily scrum meetings to produce quality deliverables within the time information and helped to clear ambiguity in the requirements document.
- Designed the Web application Using Spring MVC (Model View Controller) pattern to make it extensible and flexible.
- Analysed, designed, implemented web-based application using Java, JPA, JSP, Spring, XML, and SQL.

- Worked with Micro services using J2EE Web Services based on Spring Framework and created dynamic documentation of RESTful endpoints using Swagger API.
- Implemented UNIX utilities using shell script for data validation, manual job submission, restarting failed jobs, etc.
- Provided support for Production issues by diagnosing problems and troubleshooting various issues to ensure that all SLA's are met.
- Deployed and configured Bitbucket repositories with branching, tagging and notifications.
- Designed the application using Test-driven development by unit testing test cases using JUnit and Jasmine & Karma.
- Documented how Spring Batch is useful for the current project.
- Implemented various features of Spring framework such as Dependency Injection, IOC, Annotations, Spring Security, and Spring integration with Angular.
- Microservices have been built using Spring MVC, and Spring security and deployed to the AWS cloud.
- Used Annotations for Dependency Injection for REST APIs and Spring MVC for Microservices.
- Used Spring Framework AOP Module to implement logging in the application for the application status.
- Involved in setting up Spring security in securing the app based on user roles.
- Used Spring IOC (inversion of control) to remove the object dependencies across the application.
- Implemented the Spring-Security and Transaction Management (Spring-TX) in the Application.
- Build REST/SOAP-based Services for all user-based operations like enrolling users, modifying users, and authenticating users depending on the risk factor of the user login.
- Developed & consumed REST-based Web services to allow communication between the applications.
- Designed and developed business and persistence layer components using Spring IOC and Hibernate and Spring framework.
- Used Hibernate as an ORM tool for data persistence and retrieval of data like information on current customer enrolment etc.
- Designed and developed the REST based Microservices using Spring Data with JPA.
- Worked on development of Hibernate, including mapping files, configuration file and classes to interact with the database.
- Experienced HQL, Named Parameters, Named Queries, and Interfaces such as Expression, Query, and Criteria for implementation of Hibernate template and extensively used Hibernate Cache.
- Wrote complex SQL queries, Stored Procedures using SQL developer, executed on Oracle DB.
- Performed technical design reviews and code reviews.
- Developed unit testing framework using JUnit test cases for continuous integration testing and used JTest Tool for performance testing.
- Used JIRA to assign, track, report, and audit the issues in the application.
- Configured and administered Jenkins for CI/CD into Tomcat Application Server.
- Worked in a CI/CD environment with Jenkins, Maven and maintained the code using Git.
- Used STS for development and debugging Spring Boot applications and used GIT for version control.

Environment: Java, J2EE, SQL, PL/SQL, HTML, CSS, Angular, JavaScript, Spring MVC, Microservices, Kafka, Tomcat, GIT&GITHUB, CI/CD, Jenkins, AWS, Linux & ShellScripting.

Education:

Bachelor's In Computer Science, India

Master's Degree In Computer Science, USA
