- REST APIs
- Selenium

Work experience

Mar 2024 - current time

Senior QA Automation Engineer
Gilead Sciences

Designed and implemented scalable Selenium-based UI automation frameworks and Rest Assured API automation frameworks, reducing manual testing by 40% and accelerating test execution cycles. Developed data-driven and keyword-driven test frameworks with external repositories (Excel/DB2), enabling reusable, maintainable, and easily modifiable test cases. Automated REST API testing using Open API (YAML/JSON) specifications and SOAP services with SOAPUI, ensuring end-to-end validation and seamless system integrations. Integrated Extent Test Manager with Selenium, TestNG, and reporting pipelines, providing real-time dashboards with screenshots, error logs, and execution metrics. Enhanced test environments by automating SQL scripts and leveraging DBeaver with DB2 for dynamic test data setup and validation. Implemented performance testing with JMeter, identifying system bottlenecks and improving scalability across multiple applications. Collaborated in Agile/Scrum ceremonies (daily stand-ups, sprint planning, reviews, retrospectives), ensuring continuous alignment with development teams. Applied BDD practices with Cucumber, fostering close collaboration between developers and testers for behavior-driven acceptance criteria. Executed automated test suites across multiple environments (QA, staging, production), reported critical defects, and supported continuous integration. Managed source code with Bitbucket/Git, maintaining branching strategies, version control, and collaborative development workflows. Integrated test automation frameworks with Jenkins, GitLab CI, and Bamboo pipelines, ensuring continuous execution of test suites post-build. Monitored CI pipeline health, investigated failures, and optimized execution times by refining test suites. Provided QA support during production releases, validating hotfixes and performing smoke tests. Documented test plans, test cases, and execution results to complement automated test coverage.

Sep 2020 - Feb 2024

Senior QA Automation Engineer
Molina Healthcare

Analyzed business requirements and functional documents, created the test strategy document that define the test environment, phases of testing, entrance and exit criteria into different phases of testing and resources required to conduct the effort. Worked in agile methodology (scrum) to meet customer expectations, timelines with quality deliverables. Drafted Test Plan which included testing objectives, testing phases, scenarios and test environment after a thorough analysis of the business. Worked with a development team to understand technical design and architecture for test planning. Worked on some story development along with automation script development. Ensured compliance with HIPPA, CMS and other healthcare regulations. Do end to end testing, regression testing, SIT and API testing. Developed and execution of detailed test plan, test cases and test scripts. Created manual test cases, reviewed with different stakeholders to validate the functionality. Responsible for recommending and providing guidelines in identifying, realizing and managing enterprise service APIs. Designed and implemented automated test script for RESTful API's using tools integrated with selenium and Java/TestNG framework. Integrated API test cases with Selenium UI test flows to validate end to end application functionality. Created data-driven automation scripts to test various input combinations and verify corresponding API outputs. Responsible for securing API proxies using various mechanisms like API key, OAuth, and content protection polices in Apigee Edge. Work with Postman for testing API proxies and automating test cases using postman scripts. Used postman API to get convenient, visual display of query results. Report bugs and doing regression testing. Using swagger/JSON as for documenting API's and on boarding it into production developer portal. Integrated services with management analytics and helped in improving the API performance and maintenance.

Aug 2017 - Aug 2020

Senior QA Automation Engineer

	K Travel port, Designed and implemented a custom automation framework using UI Automator to test SSL/TLS certificate installation and validation on Android devices, ensuring secure communications. Developed UI Automator scripts to simulate user interactions with the Android Settings app, automating certificate installation workflows. Automated Android security settings interactions, including permission handling, certificate acceptance, and validation of successful installation. Collaborated with developers to verify SSL/TLS certificate functionality, validating secure connections between Android applications and backend servers. Integrated ADB commands with UI Automator, enabling automation of certificate installation via both UI workflows and command-line execution. Performed regression testing across multiple Android OS versions and device types, ensuring stability, compatibility, and backward support for certificate management. Designed and developed a reusable drag-and-drop automation framework, applicable across web and mobile applications, reducing script duplication and framework maintenance effort. Automated complex user interaction scenarios, including: Device configuration via web and mobile UIs. Simulation of user mobility across multiple Wi-Fi access points to validate seamless handoffs. Verification of continuous connectivity and optimal access point switching during real-world roaming scenarios.
Mar 2016 - Jul 2017	Software QA Tester AMD Participated in all phases of the Software Development Life Cycle (SDLC), ensuring on-time QA deliverables.Collaborated in weekly sync-up meetings with QA and Development teams to track progress, resolve blockers, and align on quality goals.Acted as a liaison between technical teams and management, ensuring transparency on quality expectations and project milestones.FollowedAgile/Scrum practices including Sprint Planning, Backlog Grooming, Daily Stand-ups, and Retrospectives.Contributed to fit-gap analysis for Oracle PeopleSoft ERP, assessing delivered vs. required functionalities to support customization decisions.Maintained a Requirements Traceability Matrix (RTM) to ensure end-to-end test coverage and traceability.Authored and executed manual test cases in HP ALM, generating detailed test execution and defect reports.Conducted GUI and Cross-Browser Testing across Chrome, Firefox, Internet Explorer, and Safari.Verified dynamic and static elements using XPath, CSS selectors, and HTML IDs.Performed backend validations with SQL queries, ensuring data integrity and consistency.Developed hybrid automation frameworks using Java, Selenium WebDriver 3.x, TestNG, and Maven, improving reusability and maintainability.Managed test automation pipelines with Jenkins, integrating automated test suites into CI/CD workflows. Automated regression scenarios using Robot Framework (Python) and JUnit/TestNG (Java). Built BDD test suites using Cucumber, writing Gherkin feature files with step definitions in Java and Ruby. Automated Angular-based applications using Protractor and Jasmine, validating UI functionality. Configured Selenium Grid and Remote WebDriver for parallel execution and cross-environment testing. Built custom API automation frameworks using JUnit, TestNG, Python Requests, and Newman for comprehensive service validation.Managed test automation pipelines with Jenkins, integrating automated test suites into CI/CD workflows.
Jul 2015 - Feb 2016	Software Test Engineer PwC Analyzed business requirements and prepared detailed test plans, test cases, and test data to ensure coverage of functional and non-functional requirements.Performed functional, regression, integration, and system testing to ensure software qualityMaintained a Requirements Traceability Matrix (RTM) to ensure end-to-end test coverage.Conducted sanity and smoke testing on new builds to validate application stability before release cyclesConducted GUI andCross-Browser Testing using Selenium WebDriver across Chrome, Firefox, IE, and Safari.Prepared and reviewed test summary reports and documented results for management review Performed backend validations with SQL queries to check data accuracy and consistency.Developed hybrid automation frameworks using Java, Selenium WebDriver 3.x, TestNG, and Maven.Participated in Agile/Scrum ceremonies (daily standups, sprint planning, retrospectives) to support iterative development. Validated RESTful APIs using Rest Assured (Java) and integrated API checks into BDD/TDD workflows. Tested SOAP services using SOAP UI, performing XML assertions, schema validations, and regression suites for service stability.Validated RESTful APIs using Rest Assured (Java) and integrated API checks into BDD/TDD workflows.Automated Angular web applications using Protractor and Jasmine, implementing robust UI validation test scripts. Managed test automation pipelines with Jenkins, integrating with CI/CD workflows.Conducted fit-gap assessments of Oracle PeopleSoft ERP features, aligning delivered solutions with client-specific requirements. Managed test automation pipelines in Jenkins, integrating them with CI/CD workflows for continuous feedback and faster. releases.custom API test frameworks using JUnit, TestNG, Python Requests, and Newman for Postman collections.Verified SOA communications through automated validations of XML/SOAP payloads.
Education	
2014 - 2016	Engineering and Management Master's degree International Technological University (ITU)
2008 - 2011	Business/Commerce, General B.COM

Summary

I am a QA Automation Engineer with 10+ years of experience specializing in manual testing, automation, DevOps, and performance testing across Web, Mobile, API, Cloud (AWS), and enterprise applications. Over the years, I have built and optimized robust test automation frameworks using Java, Selenium, Appium, Rest Assured, TestNG, JUnit, Cucumber, and Jenkins, accelerating release cycles and improving product quality. I have played a key role in Agile/Scrum environments, actively participating in sprint planning, backlog grooming, and retrospectives as a QA representative. With proven expertise in TDD, BDD, and CI/CD pipelines, I bring efficiency and reliability to software delivery. My background also includes cloud testing on AWS, performance testing with JMeter/LoadRunner, and service validation with SOAPUI and Postman. Beyond my technical expertise, I am known for my collaborative approach, problem-solving mindset, and focus on continuous improvement. I thrive on working with cross-functional teams, aligning QA strategies with business goals, and staying ahead of emerging trends in software testing and automation.
