EDUCATION

University of New Haven (*Master of Science, Computer Science*)

May 2023

Jawaharlal Nehru Technological University (*Bachelor of Technology, Computer Science and Engineering*)

April 2019

PROFESSIONAL SUMMARY

- Dynamic and results-driven Java Fullstack Developer with around 5 years of hands-on experience in designing, developing, and deploying web applications.
- Strong expertise in web development using HTML5, CSS3, JavaScript (ES5 & ES6), jQuery, Bootstrap, Angular, React, XML, AJAX, and JSON, ensuring compliance with W3C Web Standards.
- Extensive experience in Microservices development with Spring Boot, enhancing scalability and modularity of applications.
- Implemented CI/CD pipelines leveraging Docker for seamless integration with DevOps practices.
- Proficient in developing Enterprise applications utilizing Java, J2EE, Servlets, JSP, Spring, Struts, JDBC, Hibernate, JavaBeans, XML, and Web Services (SOAP & REST).
- Expertise in working with Relational databases like MySQL, Oracle, DB2, PostgreSQL as well as NoSQL databases like MongoDB and Cassandra.
- Implemented JMS messaging using Apache Active MQ, Rabbit MQ and Kafka for reliable and asynchronous information exchange.
- Hands-on experience with build tools including Maven and Gradle for efficient project management.
- Proficient in unit/integration testing with JUnit and performance testing with JMeter.
- Extensive UNIX and Linux platform experience, including shell scripting and CRON job configuration.
- Demonstrated expertise in Kafka and advanced Java concepts, driving digital transformation initiatives effectively.
- Proficient in web service testing using tools like Swagger, SoapUI, and Postman.
- Extensive SDLC experience including Requirement Analysis, Design, Coding, Application Implementation, Unit testing using JUnit and BDD Cucumber and production support.
- Utilized core Java, Spring/Struts, REST API, Hibernate, JPA, Servlets, JSP, JSTL, JavaBeans, Design Patterns.
- Proficiency using Spring AOP, Spring MVC, Spring DATA, Spring Security, JDBC, JPA, Hibernate, and RDBMS.
- Proficient with version control systems such as SVN, GIT, and GITHUB, and bug tracking tools like Quality Center, HPALM, and Jira.
- Proficient in utilizing WinSCP, a secure FTP and SCP client for Microsoft Windows, to share data across Linux and Windows systems, as well as building shell scripts for deployment processes.
- Experienced with various IDEs including Eclipse, Spring Tool Suite, IntelliJ, and NetBeans.
- Implemented security and authentication concepts such as OAuth 2.0 for enhanced application security.
- Hands-on experience with AWS services including EC2, ELB, VPC, Route53, Auto Scaling, AMIs, AWS Identity and Access Management, AWS CloudWatch, and Amazon EBS.
- Created functions and assigned roles in AWS Lambda using Java for event-driven processing.

TECHNICAL SKILLS

- Languages : Java, JavaScript, TypeScript, Python
- Web Development : HTML, CSS, JavaScript, React, Node.js, Express.js
- Database : SQL Server, DB2, MySQL, Oracle, Sybase, MongoDB
- J2EE Technologies : Servlet, JSP, JSTL, EJB, JMS
- Frameworks : Struts, Spring Boot, JPA, Hibernate, Spring MVC, JMS, Angular, Node Js, JQuery.
- Web Services/Messaging : Web Services, RESTful, Apache-Kafka
- Build Tools : Ant, Maven, Gradle, Jenkins, NPM
- Testing Frameworks & Tools : Selenium, TestNg, BDD Cucumber, Git, Junit, Tortoise SVN, Maven, Gradle, Jenkins.
- Version Control : Git, Github, BitBucket.
- Web/Application Servers : Apache Tomcat, Weblogic, Websphere.
- DevOps : Docker, Kubernetes, Jenkins, Terraform
- Test Management Tools : HP ALM, RTC, Rally and JIRA.
- Browsers : Google Chrome, Firefox, Edge, Opera, Android (V. 8,9,10,11), Safari
- Agile Methodologies : Scrum, Kanban, Waterfall. Agile project management tools (Jira, Trello)
- IDE : Eclipse, IntelliJ, RAD, Visual Studio Code.
- OS/Application Management Tools: Linux, Windows, JIRA, Jenkins, Docker

PROFESSIONAL EXPERIENCE

Java Fullstack Developer

Jan 2023 – Present

UnitedHealth Group

Remote

Key Contributions:

- Involved in all stages of design, development, and deployment of applications. Active role in Test Driven Development termed as TDD apart from Agile Software Development.
- Implementation of a responsive UI which will scale itself depending on the device, platform and browser, using ReactJS, HTML5, CSS3, Tailwind and performed client-side validations using JavaScript.
- Developed reusable custom components using ReactJs and has expertise in developing multi-level components that can communicate data based on event handling across layers.
- Developed various screens for the front end using React JS and used various predefined components from NPM (Node Package Manager) and Redux library.
- Built backend REST API with Node.JS, React.JS and Implemented modules into Node JS to integrate with designs and requirements.
- Implemented the project as a multi-tier application using Spring MVC, Spring boot, Microservices & used core Spring concepts like MVC, AOP, IOC.
- Used Spring Framework at Business Tier and uses Spring container for initializing services and used Spring Core Annotations for Dependency Injection such as Bean, Component, Repository, Autowired etc.,
- Implemented Multithreading for improving performance of the batch processes.
- Developed REST controllers using Spring Data REST to serve the UI with required JSON data.
- Used complete annotation driven approach to develop the application using Spring Boot and was also involved in setting up the Spring bean profiling.
- Experience in developing microservices using Spring Boot and Netflix Hystrix for fault tolerance and reduce network latency.
- Customized Restful Web Service using Spring Restful API, sending JSON format data packets between front-end and middle-tier controllers.
- Implemented Batch jobs using Spring Batch by creating various item readers, item writers and item processors.
- Used Spring Security to provide authentication, authorization and access-control features for this application.
- Developed REST microservices using Spring Reactive API for asynchronous communication and non-blocking data processing.

- Worked on partition of Kafka messages and setting up the replication factors in Kafka Cluster and have also used Spring Kafka API calls to process the messages smoothly on Kafka Cluster setup.
- Responsible for creating an instance on Amazon EC2 (AWS), Pivotal Cloud Foundry and deployed the application on it. Involved in the development of Microservices for all the models using combination of Spring Boot and Spring Security.
- Used design patterns like Singleton, Data Access Objects, Factory, and MVC patterns to enhance code quality, maintainability, and scalability.
- Developed the persistence layer using Hibernate Framework by configuring the 1:1/1:M/M:M mappings in hibernate files and created DAO and POJO.
- Used REST API, HTTP requests and implemented JSON format for data exchange for communication of microservices with one another.
- Worked with databases such as Oracle, Mongo DB and PostgreSQL to store, query, and manage the application data efficiently.
- Proficient in creating and managing database schemas, tables, views, and constraints to maintain data integrity and support application requirements.
- Implemented robust exception handling and logging mechanisms in PL/SQL for efficient debugging and maintenance.
- Utilized implicit and explicit cursors in PL/SQL for efficient data traversal and manipulation in enterprise applications
- Stream applications using Kafka APIs and Kafka Streams API. Wrote Producer and Consumer API to publish and consume data from topics respectively
- Developed RESTful web service using Spring and JAX-RS for retrieving data from server and internal communication.
- Wrote python scripts to parse XML documents and load the data in database.
- Implemented a Continuous Delivery pipeline with Dockers, Jenkins through GitHub.
- Containerized applications with Docker, creating Docker images for microservices to ensure consistency across development, testing, and production environments.
- Developed CI/CD system with Jenkins on Kubernetes container environment utilizing Kubernetes.
- Designed JUnit test cases for various services to assert the final message integrity as a part of Dev testing.
- Used REST Client and POSTMAN to test the REST based services and used Junit and Mockito to test the middleware services.
- Used ELK (elastic, Logstash and kibana) stack for monitoring, reporting, creating dashboards for demonstration status of Application and status of the cases assigned.
- Used GraphQL to manipulate the JSON data to display specific fields what client is expecting.
- Designed the cucumber test cases and step definitions to perform integration testing and UAT testing.
- Used Maven as a build tool and Jenkins for monitoring the build status of the project.
- Involved in deploying systems on Amazon Web Services (AWS) Infrastructure services EC2 and utilized most of the AWS services like S3 as a data store for storing the files that falls into the bucket, IAM roles, Elastic Bean Stalk, generated Lambda Functions to trigger an event that occurs in S3, Code Commit as a Version control service, AWS Cloud Watch.
- Implemented serverless functions with AWS Lambda, optimizing resource usage and reducing operational costs for asynchronous processing tasks.

Environment: Java, Spring Boot, ReactJS, NodeJS,Vue.js, Hibernate, Mongo DB, PostgreSQL, Jenkins, Docker, Kubernetes, Webservices(SOAP,WSDL),AWS,Maven,Git,XML,XSLT,JSP,ApacheKafka,AWS

Software Engineer

June 2019 – July 2021

Tata Consultancy Services

Hyderabad, India.

Key Contributions:

- Followed Agile Software Development Methodology to build the application iteratively and incrementally. Participated in scrum related activities and daily scrum meetings.
- Developed web applications using Spring Boot, Spring Core, Spring MVC, Spring AOP, Spring Actuator, Spring ORM, Spring Integration, Spring Transaction, Spring Webflux (Reactive stack), Spring Security, Spring JPA and Spring REST.

- Used Java features Lambda expressions along with Streams for creating internal iteration and performing chain operations such as Filter, Map, Collect on a collection.
- Developed the user authentication and authorization by using Spring Security OAuth2.0 and JSON Web Token (JWT).
- Implemented SOA to develop Spring Restful/Microservices and implemented Spring Eureka, Netflix, Ribbon as part of Services Discovery using Eureka.
- Experience in implementing the security on microservices using Spring Boot Auth server which generate JWT tokens.
- Maintained Kafka Cluster by creating Topics, Partitions for point to point messaging.
- Managed configuration of Kafka cluster, Broker, Topics and used Kafka Consumer, Producer, Streams API.
- Developed Hibernate with Spring Integration as the data abstraction to interact with the Oracle 11g, implemented transactions, proxies, locking, HQL, Criteria, Projections and Stored Proc calls.
- Wrote numerous complex queries, stored procedures, triggers to fetch the data from Oracle, Sybase databases and prepare the AR, GL files.
- Wrote cron jobs and shell scripts to fetch the data from the database and send it to other systems using SFTP protocol.
- Created multiple automation tests across multiple applications which run periodically and email the team if there was any unexpected behavior.
- Involved in developing UI using HTML5, CSS, JavaScript, JQuery, AJAX and Angular 12.
- Used Angular as framework to create a Single Page Application (SPA) which can bind data to specific views and synchronize data with server.
- Used Python scripts to update content in the database and manipulate files.
- Used Python and Django creating graphics, XML processing, data exchange and business logic implementation.
- Created, edited and maintained sites implementing responsive design themes using front end development frameworks including Bootstrap.
- Developed highly interactive web application using Angular with a focus on responsive design and cross-browser compatibility.
- Designed and implemented custom Angular components, directives, and pipes to enhance application functionality and user experience.
- Implemented JS source code, embedded nested handling logic using JQuery event handlers and call back functions.
- Configured Jenkins for continuous integration and deployment (CI/CD), automating the build, test, and deployment processes, which increased the efficiency and reliability of code releases.
- Containerized applications using Docker, creating Docker images for both the frontend and backend services to ensure consistency across different development and production environments.
- Deployed and managed services using Kubernetes, leveraging its orchestration capabilities to manage containerized applications, ensuring high availability, scalability, and efficient resource utilization.
- Deployed microservices built with Spring Boot and Docker containers using Amazon EC2 container services via the AWS admin console.
- Using VPC, EC2, S3, Route 53, EBS, Security Group, Auto Scaling, and RDS in Cloud Formation to build the AWS infrastructure. Angular CLI with production bundling was implemented, and unit test cases for Angular v12 components were written using Jasmine and Karma
- Performed unit testing methodologies, using frameworks like JUnit and Mockito to validate the functionality of individual code components.
- Proficient in deploying and managing Java-based web applications on Apache Tomcat servers.
- Expertise in diagnosing and resolving issues related to deployment, server logs, and connection errors in Tomcat.
- Implemented Log4j for logging and monitoring application events, facilitating effective troubleshooting and debugging.
- Used BitBucket to push the code and interact with other developers throughout the project.

Environment: Java, Javascript, JQuery, Angular12, Hibernate, Spring, Spring Boot, Apache Kafka, Servlet, JSP, Struts, Docker, Kubernetes, AWS, SQL, Oracle, Sybase, AWS, BDD Cucumber, Junit, Mockito, Bitbucket, Tomcat.

Java Developer

April 2018 – June 2019

Secure Data Admins Technologies

Hyderabad, India.

Key Contributions:

- Designed and implemented RESTful APIs using Spring Boot, facilitating seamless communication between front-end and back-end systems, resulting in a 40% reduction in API response time.
- Utilized MVC (Model-View-Controller) architecture to design and develop a modular and maintainable codebase, enhancing code reusability and readability, leading to a 20% decrease in code complexity and maintenance effort.
- Employed JDBC Template for efficient and structured data access, enhancing database interactions. Developed custom Row Mappers to convert query results into Java Objects, improving data retrieval efficiency.
- Worked on different modules of Spring including Spring MVC, Spring ORM and Spring Boot to develop production ready and easily deployable applications.
- Integrated Hibernate ORM framework to manage database operations efficiently and maintain data integrity. Created mappings for several database tables by creating JPA repositories and implementing custom queries.
- Assisted in database-related tasks, including data modeling, query optimization, and database maintenance.
- Implemented PL/SQL procedures and views in Oracle Database using Altova Database spy.
- Designed and developed complex PL/SQL scripts, stored procedures, functions, packages, and triggers to support business logic and data processing.
- Optimized SQL queries and PL/SQL code for improved performance, including indexing strategies, query refactoring, and execution plan analysis.
- Worked on improving performance of the application by implementing multi-threading in many API's.
- Developed responsive and user-friendly front-end interfaces using HTML5, CSS3, AJAX, and Bootstrap.
- Implemented comprehensive testing strategies, including unit testing with JUnit and Mockito, as well as integration testing with Spring Test, ensuring software quality and reliability, resulting in a 50% decrease in the number of bugs reported post-release.
- Skilled in configuring Tomcat server settings, including connection pooling, memory allocation, and thread tuning for optimal performance.
- Utilized version control systems such as Git and GitHub for managing source code, branching and merging, collaborating with team members, and tracking the changes effectively.
- Implemented Log4J for logging errors, debugging and tracking using logger's components.

Environment: Java, Javascript, Spring, Hibernate, SQL, PL/SQL, HTML, CSS, Bootstrap, SpringBoot, JSP, Junit, Mockito, Tomcat, Github, Log4j, Apache Kafka.
