

RAVNEET SINGH BHASIN

Greater Toronto Area, Ontario L7A 0S5

Email: ravneetsinghbhasin@gmail.com

Phone Number: + 1 416 999 3413

Accomplished and results-driven .NET Technical Lead with over 12 years of experience in full-stack development and team leadership. Proven ability to lead and mentor development teams, create dynamic and user-centric web applications, and deliver high-quality solutions within fast-paced, agile environments. Adept at leveraging both front-end and back-end technologies to enhance platforms and drive business success.

TECHNICAL SKILLS

Technologies: .NET, .NET Core, ASP.NET Core, MVC, ADO.NET, .NET Core Web APIs, Restful Web APIs, WCF, .Net Standard libraries, LINQ, OAuth, Powershell scripts, Docker, Jenkins scripting, Postman scripting, AWS, Azure, HTML, CSS, SASS, XSLT, JavaScript, TypeScript, jQuery, Razor view, React and Angular

Tools: Git, TFS, JIRA, VSTS, Azure DevOps, Confluence, SOAP UI, SOAP Sonar, Postman, IIS, Remedy, Bitbucket, Jenkins, Docker Desktop, Kibana, Dynatrace, SumoLogic, Google Lighthouse

Languages: C#, VB and Python

Databases: Microsoft SQL Server, Azure SQL & PostgreSQL

PROFESSIONAL EXPERIENCE

Module Lead

Apr 2021 – Present

Bell Canada (Contract)

- Leading end-to-end feature implementation projects and mentor a team of 4 developers, ensuring adherence to clean code practices and industry best standards
- Comprehending and analyzing requirements from Product Owners and Business Analysts
- Cooperating with cross-functional teams to draft Software Requirements Specifications (SRS) and High-Level Design (HLD) documents
- Coach and mentor team members on Agile principles, Scrum framework, and technical aspects of .NET development.
- Transitioning .Net-based WCF SOAP services to Restful Web APIs
- Constructing web applications utilizing the C#, .Net, .Net Core, Web APIs, SQL, and Azure
- Building UX using UI technologies HTML, CSS, SASS, ASP.NET, Typescript & React
- Migrating web applications from the .Net framework to .Net Core
- Designing and creating new Restful Web APIs for Mobile Apps & Web platforms
- Managing multiple telecom brands within a shared code base while upholding optimal performance
- Built API testing suite utilizing Postman and added it to CI/CD pipeline
- Utilize MS SQL Server for database development, including advanced SQL and database design
- Implement continuous integration and continuous delivery (CI/CD) pipelines using Jenkins to automate build, test, and deployment processes

Technical Lead

May 2019 – Feb 2021

LTIMindtree - McAfee (Client)

- Engaged in the development of McAfee E-Commerce platforms and drive business success
- Collaborate with Product Managers, UX designers, Architects, and QA engineers to design and build high-quality E-Commerce solutions
- Guide Agile development team of 8 members, comprising 6 Developers and 2 QA professionals, in sprint planning, daily stand-ups, and sprint reviews.
- Oversee performance reviews, provide technical guidance, and tear down obstacles to keep projects on track.
- Act as a liaison between development teams and upper management, providing regular project status updates and identifying potential roadblocks.
- Implemented a Payment Routing mechanism using C#, ASP.NET MVC, .Net, .Net Core
- Constructed a platform for integrating Restful Web APIs into the McAfee Consumer web ecosystem
- Demonstrate proficiency in C#, HTML/CSS, JavaScript, jQuery, and Angular
- Integrate various Payment Gateways like PayU, Chase, and WorldPay
- Ensured seamless integration between front-end and back-end technologies, creating full-stack web solutions
- Established applications for data transmission to AWS Cloudwatch and AWS DynamoDB
- Crafted Stored Procedures, Triggers, Indexes, and SQL scripts using MS SQL
- Oversaw the deployment and performance monitoring of applications within the Production environment

Software Developer II

Aug 2018 – Apr 2019

Cinchy

- Spearheaded the advancement of Cinchy's foundational product - Data Fabric, as one of the earliest senior developer hires in the startup
- Designed and implemented integrations for diverse systems such as Oracle, SQL Server, Salesforce, and more, leveraging early-stage startup resources
- Developed UI applications using C#, ASP.NET MVC, jQuery, and interfaced with SQL databases, contributing significantly to the product's initial feature set
- Pioneered the formulation of an integration framework based on .Net Standard, laying the groundwork for future scalability and interoperability
- Successfully deployed OAuth through Identity Server 4 in the .Net Core environment, demonstrating innovative solutions within limited resources
- Generated client demos employing Angular and React technologies, showcasing the startup's product capabilities to potential customers
- Devised SQL schema designs and authored Stored Procedures, Functions, Triggers, and Indexes, optimizing data management
- Guided and mentored junior developers, fostering a culture of continuous learning and improvement
- Provided comprehensive solutions for client implementations, leveraging early-stage startup agility to rapidly address customer needs and feedback
- Exhibited self-management in the dynamic startup environment by independently prioritizing tasks, adapting to evolving project needs, and actively contributing to product success

Senior Software Engineer**Nov 2017 – July 2018***Replicon Software*

- Formulating technical specifications and generating design documents
- Establishing a Cloud Portal platform that streamlines manual AWS tasks through applications built in C#, ASP.NET MVC, and jQuery
- Creating essential Web APIs to underpin the platform's functionality
- Facilitating the connection between the platform and AWS using C#.NET and AWS SDK
- Devising the database structure for the Cloud Portal product within a PostgreSQL environment
- Constructing Windows services and scheduler tasks dedicated to handling requests initiated from the Cloud Portal application
- Incorporating AWS SDK functionalities to manage scheduled warm-up, cool-down, and backup processes to optimize Cloud services usage and costs
- Executing automated Reports through integration with Sumo Logic Dashboard API
- Engaging directly with the Department Head to fully comprehend project requirements

Professional 2 - Product Developer**Apr 2015 – Oct 2017***DXC Technology*

- Conducted thorough analysis of requirements and their impacts, guiding ideation sessions for effective requirement collection.
- Developed C#-based Web APIs to enable seamless integrations, enhancing connectivity across DXC's proprietary products using XSLT, XSD, and WCF services.
- Led the LSS-RMA integration project for ARCH Insurance's enterprise client, addressing client and QA team issues efficiently.
- Realized user interface for the LSS product using C#, ASP.NET MVC, Kendo UI, and Angular, ensuring intuitive user experience.
- Designed schemas and crafted SQL database scripts for smooth data migration, establishing Windows service schedulers to streamline integration data processing.
- Took the lead in client demonstration sessions, showcasing product capabilities and fostering client satisfaction.

Software Engineer**Aug 2012 – Mar 2015***Fiserv*

- Lead requirements gathering, system analysis, and technical specifications.
- Establish Fiserv's payment platform built in C#, ASP.NET, jQuery, SQL and WCF services.
- Develop multiple web services for Banking and Payment solutions.
- Engaging with multiple clients and product teams for Integrating different products
- Implemented Bill Payment Service for Same Day Payment initiative.
- Ensure extensive code coverage with meticulous Unit Test cases.

EDUCATION**Bachelor of Technology in Computer Science Engineering****2008-2012***References available on request*
