---

**SUMMARY:**

- 15+ years of professional experience designing scalable and secure distributed data systems for public sector and enterprise environments.
- Delivered cloud solutions across AWS, Azure, and GCP, ensuring performance, resilience, and cost optimization.
- Translated complex customer requirements into robust architectural designs aligned with business goals and technical constraints.
- Guided technical evaluations, solution assessments, and tool selection to support effective modernization initiatives.
- Drove end-to-end solution delivery, improving operational efficiency by defining standards, patterns, and reusable components.
- Leveraged strong background in data engineering technologies and open-source frameworks to build modern data platforms.
- Enabled seamless data integration and interoperability through well-designed ETL/ELT pipelines and platform-level automation.
- Partnered with cross-functional teams to deliver tailored client solutions and ensure architectural best practices.
- Collaborated closely with engineering teams to implement secure, high-availability solutions that aligned with compliance requirements.
- Built strong customer relationships through consultative engagement, clear communication, and continuous knowledge sharing.

**WORK EXPERIENCE:**

**Client: Fifth Third Bank, Evansville, IN**

**Oct 2022–Present**

**Senior Solution Architect**

**Responsibilities:**

- Translated customer business requirements into specific system designs using Neo4J and Nodejs, enhancing integration architecture for public sector initiatives.
- Adopted data stewardship mechanisms to ensure high-quality enterprise data was maintained in the Department EA Repository, supporting robust data governance.
- Established and maintained a configuration control system for OPDIV's data in the Department EA Repository, ensuring data integrity and alignment with federal compliance mandates.
- Streamlined IT investment approvals by enforcing EA alignment and compliance, thereby accelerating project delivery and reducing exceptions for public sector operations.
- Formulated and implemented department policies, procedures, and guidelines for HHS implementation and governance, reinforcing operational efficiency.
- Enhanced system efficiency by contributing to the development and maintenance of an integrated business and information technology architecture that supported distributed data systems.
- Ensured compliance with legislative mandates and federal oversight by aligning departmental strategies with evolving regulatory requirements.
- Developed baseline and target architectures along with transition plans based on advisory body inputs, improving strategic alignment and resource allocation.
- Optimized operational efficiency and resource management by incorporating comprehensive planning strategies into Department resource allocation and control processes.

**Client: Sears Holdings, IL.**  
**Senior Solution Architect**  
**Responsibilities:**

**Aug 2020- Sep 2022**

- Collaborated with cross-functional teams and public sector stakeholders to define architectures for new or enhanced products, ensuring solutions addressed complex customer challenges.
- Translated customer business requirements into detailed system, application, and process designs, aligning technical strategies with distributed data system principles.
- Evaluated proposals and recommended technical solutions to migrate applications to AWS, leveraging cloud architecture best practices for scalable solutions.
- Designed cloud solutions through the creation of AWS Cloud Formation templates, facilitating streamlined deployment and robust infrastructure management.
- Delivered complete infrastructure solutions including end-to-end configuration and BOM development for server and storage components, enhancing system reliability for public sector projects.
- Implemented robust security measures by deploying Elastic Load Balancers and configuring HTTPS certificates, thereby fortifying web application integrity.
- Managed scalable and highly available systems on AWS, ensuring continuous performance and uptime for customer-facing applications in a public sector environment.
- Engineered VPC environments and backup strategies tailored to client requirements, enhancing data security and recovery protocols.
- Monitored production applications on AWS, applying corrective actions based on customer feedback to sustain performance excellence and user satisfaction.
- Adhered to established software development lifecycle methodologies to deliver effective, customer-centric solutions on schedule and within scope.

**Client: Amazon, WA**  
**Cloud Architect**  
**Responsibilities:**

**June 2018 - July 2020**

- Migrated internal applications to Amazon AWS, as well as upgraded jQuery. The migrations required upgrades to Hibernate, JSF, and JAXB, as well as other technology.
- Analyzed, designed, coded, tested, and documented software utilizing Java, Java Server Pages, SQL, PL/SQL, and Oracle databases.
- Collaborated with business and operations teams to recommend system enhancements, improving operational efficiency and system reliability
- Consulted across multiple IT projects and technology areas to troubleshoot, manage problems, perform root-cause analysis, and implement solutions, enhancing project outcomes and reducing downtime
- Served as a resource for technology/project development review and technical assessments, ensuring high-quality project deliverables and informed decision-making
- Applied application architecture knowledge to enhance enterprise architecture, improving system efficiency using Nodejs and SQL Database
- Utilized development domain expertise and multiple technologies, including Nginx and Azure Active Directory, to streamline application processes, enhancing system performance
- Integrated software engineering practices and database structures, using Auto Scaling and Storage Services, to improve system reliability and scalability

**Client: Apple, Sunnyvale, CA**  
**Lead Cloud Engineer**

**Dec 2017 - May 2018**

**Responsibilities:**

- Demonstrated mastery in software engineering, system integration, and database structures by utilizing AWS Services EC2 and T-SQL to enhance system performance
- Designed and developed scalable, available, and fault-tolerant systems on AWS, improving system reliability and performance
- Successfully ported a legacy, on-premises application to AWS and increased availability significantly.
- Selected appropriate AWS services based on data, compute, database, or security requirements, optimizing resource allocation and enhancing system efficiency
- Estimated AWS costs and identified cost control mechanisms, leading to reduced operational expenses and improved budget management
- Defined business strategy and determined system architecture requirements to achieve business goals, ensuring alignment with client needs
- Organized end-user training and analyzed problems for server, desktop, and IT infrastructure, enhancing user efficiency and system reliability
- Monitored servers, devices, and applications proactively to identify and rectify potential issues on time, improving system uptime and reliability
- Developed and drove short- and long-term architecture strategy and portfolio needs for key business segments, supporting organizational growth and innovation
- Served as a technical mentor to other architects and software development colleagues, enhancing team skills and project outcomes
- Provided cost-effective solutions that enabled business integration with other systems, enhancing operational flexibility
- Supported the development of architectural principles and standards, using Puppet and Linux to enhance solution consistency across business lines
- Led a cross-functional team to drive peer reviews, gain consensus, and finalize proposed solutions, ensuring stakeholder alignment

**Client: Lululemon, Dallas, TX****Jan 2016 - Nov 2017****Sr. Cloud Engineer****Responsibilities:**

- Communicated and validated architecture with various teams and stakeholders, ensuring alignment and security compliance
- Implemented and managed continuous delivery systems and methodologies on AWS and physical infrastructure
- Implemented and automated solutions on AWS cloud using Jenkins Pipeline, Terraform, CloudFormation, Ansible, and Shell, improving operational efficiency
- Defined and deployed monitoring, metrics, and logging systems on AWS, enhancing system visibility and performance tracking
- Designed, managed, and maintained tools to automate operational processes, reducing manual workload and increasing process efficiency
- Reviewed legacy architecture and identified components strategically aligned for re-architecture.
- Developed enterprise-grade applications using Java 8/JEE, AngularJS, React.js, and SQL, improving application performance and user experience
- Built highly scalable web tools to support data analysis and visualization, enhancing data-driven decision-making processes
- Created design documentation, programmed, and tested applications, iterating through the project life cycle to ensure robust and reliable software solutions

**Client: FedEx, Dallas, TX****Jun 2014 - Dec 2015****Software Developer**

**Responsibilities:**

- Developed scripts, utilities, simulators, and data generators using Python and Ansible to enhance test execution efficiency, resulting in reduced testing time
- Developed automation and test solutions using AWS Cloud and Ansible, improving test coverage and reliability
- Created comprehensive test plans and strategies, ensuring alignment with project goals and enhancing test accuracy
- Created and executed test cases based on detailed test strategies and plans, leading to improved defect detection rates
- Participated in reviews of system architecture, code, and design documents, contributing to enhanced system reliability and performance
- Communicated testing activities and findings in oral and written formats, ensuring clarity and understanding among team members
- Identified project risks and developed mitigation strategies using AWS Cloud and Ansible, reducing potential delays and ensuring project continuity
- Performed load and performance tests using Linux and VPC, ensuring system reliability and optimal performance under high traffic conditions

**Client: STATE OF NY (DOH)****Jun 2010 - May 2014****Software Engineer****Responsibilities:**

- Developed and maintained Java applications for web and desktop environments, implementing object-oriented design principles.
- Designed and implemented relational database schemas using MySQL and Oracle to store and manage application data.
- Designed and consumed SOAP-based web services for enterprise system integration.
- Created and optimized SQL queries, stored procedures, functions, and triggers for data-intensive applications.
- Implemented unit testing and JUnit test cases to ensure application quality and reduce defects.
- Created RESTful web services for application integration and inter-service communication.

**Education:** BSC, UNIVERSITY OF VADODARA, 1992
