

Summary

- Software Enterprise and Application Architect. Scrum Alliance Certified ScrumMaster
- Proven ability to architect high quality, robust and maintainable software based on best practices and modern concepts. Extensive experience in leading development projects to the successful completion. Strong consensus building skills
- Areas of expertise include: Software Architecture and Development methodologies, ML and AI integration, modernizing legacy applications into Microservices systems. Vast experience in business requirements analysis and translation into technical specification. Deep understanding of domain-driven design, test-driven development. Solid experience with producing high quality design artifacts, documentation, and technical presentations

Technology

- Java, JEE, C/C++, UML, XML, SQL, ArchiMate, Linux Red Hat, Sun Solaris, Windows
- ML/AI, Microservices, Spring, Docker, Kubernetes, JBoss, Tomcat, Solr, Oracle, Jenkins, Jupiter, Eclipse, Sonargraph, JUnit, Git, AccuRev, GitHub

Experience

Independent Consulting, Boston, MA
Consultant Architect

August 2024 – Present

Architect AI-based solutions for Software Development improvements

Aspen Technology, Inc., Bedford, MA
Senior System Architect

March 2021 – July 2024

Architected Machine Learning-based solutions for Asset Performance Management [products](#) and their cloud platform-based integration. Environment: .NET, C#, Lua, Python, SQL Server, MongoDB, Azure

- Chaired division's Architecture Review Board: created charter and policies, engaged teams, presented solutions and best practices (e.g. logging, automated functional testing, data interpolation, REST API standards), enforced and monitored approved decisions, maintained ADRs
- Performed technical assessments of existing products, develop roadmaps for architectural improvements and components' integration
- Researched and evaluated software development technologies/products: Microservices, Graph DB, Time-series data (TSD) repository, API Gateway, edge architecture, cyclic dependencies measurement tools
- Prototyped concepts: Security service (DB schema, REST API definitions), Inmation for TSD and for asset hierarchies management, TSD forecasting, DB consolidation using ETL tools
- Prepared numerous technical presentations, specifications, and knowledge base articles

NTT Data Services, Watertown, MA
Enterprise Architect

November 2019 – May 2020

Architected 3-year horizon road-map for DevOps transformation for medium size payor information system. Technologies/tools: TOGAF, Microservices, CD pipeline, Java

- Defined process, policies and tools for dealing with technical debt (clear out, audit) and improving SAFe
- Defined guidelines and audit policies for monitoring; architect CI/CD pipeline
- Architected Microservices refactoring (infrastructure Operational Readiness, code base analysis, Domain-driven design rearchitecting)

Independent Consulting, Boston, MA

January 2017 – October 2019

Consultant Architect

Architected DevOps cloud native transformation of the legacy payor systems. Technologies/tools: Microservices, Spring Boot, Docker, Kubernetes, ELK, CD pipeline

- Architected refactoring of a legacy Claim processing application to Microservices style product
- Led a TOGAF-based transformation for a health insurance provider (analyzed business processes and software components integration, developed ArchiMate business and application models, road-maps, and architected improvement solutions)

Dell Services, Boston, MA

May 2014 – December 2016

Senior Architect

Architected IT infrastructure for cloud-based payer solutions. Technologies/tools: Microservices, Java, JEE, JBoss, PL/SQL, Oracle, MongoDB. Samples of enterprise/solution/application work were:

- Led various projects: planned resources, assembled teams; estimated and planned sprints, defined iteration's milestones, monitored execution, maintained backlog; mentored junior specialists
- Analyzed code base to measure software quality metrics; identified problematic code and made review and refactoring recommendations

Dell Services, Wellesley, MA

December 2009 – December 2013

Senior Consultant/Architect

Consulted on, architected and developed enterprise SOA infrastructure. Technologies/practice: Java, JEE, Hibernate, Weblogic, TIBCO AMX, Scala, PL/SQL, Spring, DevOps

- Consulted on Software Engineering Best Practices in: system architecture and infrastructure, Java coding, thread-safety and multi-threading in Java, performance optimization
- Conducted numerous code reviews of Java programs and made recommendations on how to improve SOA architecture, code's maintainability and on how to improve Sprint requirements artifacts; drafted Java coding standards. Designed and developed Java libraries for SOA enterprise infrastructure

Rivet Logic Co., Reston, VA

August 2009 – October 2009

Senior Software Engineer

Designed and developed back end for online voting application.

AccuRev, Lexington, MA

February 2008 – December 2008

Senior Software Engineer

Designed and developed desktop (Java Swing) and Web-based (GWT) GUI for [AccuRev](#), an integrated solution for software configuration management and bug tracking.

RSA Security Inc./EMC, Bedford, MA

April 2004 – February 2008

Senior Software Engineer

Designed and developed services and modules for [RSA SecurID®](#) Authentication Manager – network security product for two-factor user authentication (WebLogic, Java/JEE, Hibernate, Spring)

- Architected integration of Authentication Manager and Kerberos Distribution Center
- Designed and developed an Agent Auto-registration service (SSL, TCP/IP, MD5)

KDnuggets, Brookline, MA

August 2001 – April 2004

Senior Software Consultant

Designed and developed software tools to support data mining projects.

IONA Technologies, Waltham, MA

November 2000 – May 2001

Software Engineer

Participated in development of [Orbix 2000](#) (client-server CORBA 3 middleware).

Open Market, Burlington, MA

July 1999 - October 2000

Software Engineer

Participated in development of the Web-based E-commerce engine [Transact](#).

Open Development Corp./Glenayre, Norwood, MA

June 1997 - March 1999

Software Engineer

Participated in development of a real time telephony software for processing menu driven telephone calls and handling calling cards.

Education

MS in Environmental Science, **Moscow State University**,

Russia, 1990
