Summary

- Over a decade of experience as a solutions-driven Business Analyst with certification as a SAFe Agilist Practitioner (6.0). Proven proficiency in requirements gathering, analysis, and documentation.
- Conduct stakeholder interviews and workshops to comprehend business needs.
- Perform system analysis, evaluate existing systems, and identify opportunities for improvement.
- Analyze and document current and future-state workflows. Interpret complex data sets to derive meaningful insights.
- Develop data models and utilize SQL for data querying and reporting. Create comprehensive Business Requirement Documents (BRD) and functional specifications.
- Develop process flowcharts, data flow diagrams, and relevant documentation.
- Facilitate communication between technical and non-technical stakeholders.
- Plan, coordinate, and execute User Acceptance Testing (UAT) sessions. Collaborate with users to ensure delivered solutions meet business requirements.
- Work in Agile or Scrum environments, participating in sprint planning and backlog grooming.
- Identify and resolve issues and bottlenecks in business processes.
- Provide recommendations for process improvements. Familiarity with IT concepts and technologies.
- Understanding of the Software Development Life Cycle (SDLC) and various methodologies.
- Identify and assess project risks, develop mitigation strategies, and monitor risks throughout the project lifecycle.
- Use tools like Jira, Confluence, Visio, etc., for project management and documentation.
- Collaborate with cross-functional teams, including developers, QA, and project managers.
- Build strong relationships with business stakeholders.
- Participate in quality assurance activities to ensure delivered solutions meet quality standards.
- Adaptability to changing project requirements and priorities. Stay updated on industry trends and best practices.
- Develop training materials and provide user training. Offer ongoing support and address user queries.
- Extensive experience in Pharma Manufacturing, Auto Insurance & Banking Domains.
- Worked in various SDLC methodologies, including Waterfall and Agile-KANBAN.
- Testing experience across multiple application teams, including Database testing and Integrated Testing. Experience in debugging issues and creating test cases.
- Ability to create User Stories based on Features and Epics provided by Business Owners/Stakeholders. Experience in PI planning and analyzing Features and NFRs.
- Define project scope and schedule for timely delivery of value.
- Assist in team development, removing roadblocks, and mentoring team members.
- Support application teams/stakeholders in managing customer expectations and implementing effective project governance.
- Exposure to mapping business requirements, designing customized solutions, and handling pressure.
- Hands-on experience with reporting tools like Power BI and Tableau.
- Creation of Standard Operating Procedures, Service Level Agreements, Office Level Agreements, and training manuals.

- Development experience in SailPoint, configuring various connectors (delimited file, JDBC, LDAP, Oracle-Direct, SAP-Direct, Sun-one Direct, Active Directory) in IIQ.
- Proficiency in Relational Database Management, especially with Oracle 8i/9i/10g/11g, DB2, SQL Server.
- Experience with Data Analytics and reporting using Power BI.
- Experience in preparing Test strategy, developing Test plans, Test cases, and writing Test Scripts.

Technical Skills

Languages:	Java, SQL, HTML, XML, JavaScript
RDBMS:	Oracle, MySQL, SQL Server
IAM Tools	SailPoint IIQ 6.X /7.2, Sun IDM 8.1, OpenSSO 8
Directory Server	LDAP, Active Directory, Open DJ
Open Source Libraries:	Log4J, Junit, ANT, Maven
GUI Technologies:	HTML, CSS, JavaScript
Application Servers:	Apache Tomcat, WebLogic, WebSphere
IDE Tools:	Eclipse and NetBeans
Operating Systems:	Unix, Linux, Solaris, Windows
Reporting Tools	Power BI, Tableau

Certifications:

- Safe Agilist 6.0 Certified
- WES for verified international academics qualifications
- SAS Certified Base Programmer

Education:

Bachelors in Computer Applications – Osmania University, Hyderabad, India. – 1999 -2002

Masters in Computer Science – Southern New Hampshire University – 2013-2015

Project Experience:

Client: Eli Lilly Inc

Dec 2017 – Present

Location: Indianapolis, IN

Role: Product Owner/ Business Analyst/ Project Co-Ordinator

- As a Security Analyst and a Product Owner analyzed, documented, and improved business processes.
- Conducted stakeholder interviews and workshops for needs assessment.
- Proficient in data analysis, SQL, and creating data models.
- Developed comprehensive business requirement documents (BRD) and functional specs.
- Experienced in Agile/Scrum environments, collaborating with cross-functional teams.
- Planned, executed, and monitored UAT sessions.
- Identified issues in business processes, proposing effective solutions.
- Familiar with IT concepts, SDLC, and risk assessment strategies.
- Used Jira, Confluence, Visio, and other tools for project management.
- Built strong relationships with stakeholders.
- Conducted Risk Assessments and Vulnerability Risk Analysis.
- Analyzed and reported security events, including Microsoft vulnerabilities.
- Utilized Excel, Splunk, and Power BI for reporting and analysis.
- Provided guidance on secure protocol integration and migration projects.
- As a IAM Analyst worked with myAccess IIQ (6.4) and various connector types.
- Conducted Group Analysis and Application Onboarding Assessments.
- Developed, tested, and validated JDBC application connectors.
- Implement and administer the ETQ QMS solution.

- Configure and customize the software to meet quality and compliance requirements.
- Continuously evaluate and recommend improvements to optimize ETQ system performance.
- Worked on modules like Document Control, Audit Management, and CAPA (Corrective and Preventive Action).
- Build and maintain strong client relationships by understanding their needs and expectations.
- Identify opportunities for upselling or expanding services to existing clients.
- Implement and manage document management systems to ensure effective document control.
- Create, organize, and maintain electronic and physical document repositories.
- Develop and enforce document management policies and procedures.
- Ensure documents are classified, versioned, and accessible to authorized users.
- Coordinate document reviews, approvals, and revisions
- Used DMS software options such as Microsoft SharePoint, and DocuWare, for organizing, storing, and securing documents.
- Knowledge on using IMDS. Managed IMDS database, ensuring accurate and up-to-date material data for product lines.
- Collaborated with suppliers to collect and validate material data for regulatory compliance.
- Generated IMDS reports and documentation to meet [specific industry] environmental regulations.
- Played a key role in myAccess IIQ 7.2 upgrade and High Jump application migration.
- Developed, reviewed, and modified Agile project plans.
- Facilitated Daily Standups and participated in Sprint Reviews.
- Utilized Jira for tracking team progress and individual performance.
- Ensured proper documentation of artifacts and user stories.
- Performed standalone and integration testing for various applications.
- Managed user and access during onboarding.
- Maintained links within different modules of Warehouse Inventory System.
- Engaged in continuous improvement by identifying opportunities.

Environment: Jira, SailPoint 6.4 p7 and 7.2 p2, SQL Server, Toad, JDK 1.7, Eclipse, TFS, Group Manager, Softerra, Netezza, SharePoint, Service Now, Notepad++, Beyond Compare, Java, Oracle, Active Directory, Splunk.

Client: Allstate Insurance

May 2017 – Dec 2017

Location: Northbrook, IL

Role: IAM Business Analyst

- Revamped and upgraded existing documentation from version 6.3 to 7.1, enhancing key aspects of the system.
- Contributed to the creation of detailed design documentation, focusing on Application Connectors, Workflows, Certifications, Roles, Applications, and Rules.
- Applied Tableau for data analytics, adeptly crafting interactive data visuals to simplify complex data structures.
- Engaged in the refinement and modification of both existing and new data models specifically tailored for Tableau.
- Demonstrated proficiency in developing Business Scorecards to assess customer and internal applications, as well as organizational capacity.
- Utilized Agile Project Methodology, participating in 2-week sprints for effective project management.
- Assisted in the formulation of test cases and test steps, particularly for JDBC, Oracle Direct connectors, and LDAP connectors.
- Operated within the realm of Business Services, contributing to the configuration of JDBC, Delimited, SAP-Direct, and other authoritative application sources.

- Configured various connectors, including SAP-Direct, Oracle-Direct, LDAP, Sun-One Direct, and Active Directory, serving as target connectors.
- Engaged in the configuration of Auto Provisioning and Manual provisioning for Authoritative Sources and Downstream applications within IIQ.
- Managed the Entitlement Catalog, involving the extraction of existing entitlements from the Database and their subsequent import with alignment to Managed attributes.
- Conducted both Unit testing and Functional testing in alignment with the drafted test plan.
- Oversaw the migration and configuration of Password Policies into the 7.1 Environment.
- Handled the migration of rules and workflows that dictate identity provisioning and de-provisioning.
- Focused on Out-of-the-Box (OOB) and Custom Quick links for creating new identities and managing Downstream applications.
- Configured diverse aggregation tasks, encompassing Account, Group, and Sequential Aggregations.
- Customized Provisioning Forms, Rules, and Methods to align with specific project requirements.
- Executed the migration of reports, both OOB and Custom, from version 6.3 to 7.1.

Environment: SailPoint 6.3 and 7.1, Tableau, SQL Server, JDK 1.7, XML, Windows Server 2003, JX explorer, Eclipse IDE 4.5.2, Java, SQL, Beyond Compare, Putty, GitHub, Notepad++

Client: Santander Bank

Jan 2017- May 2017

Location: Boston, MA

Project: SANIAM

Role: IAM Support Engineer

- Contributed as a vital member of the transition team, delving into the intricacies of SailPoint's current architecture and design.
- Conducted a comprehensive review of all documentation related to the existing Identity and Access Management (IAM) Application.
- Operated within both IIQ versions 6.4 and 7, demonstrating versatility across various connectors, including Delimited, JDBC, Logical, and Active Directory (AD).
- Performed extensive work on application validation, particularly in configuring aggregation settings.
- Utilized Out-of-the-Box (OOB) and Advanced Analytics tools for the generation and scheduling of reports.
- Engaged in the creation of custom Email Templates tailored for scheduler Email reports.
- Played a key role in Access Requests and certification processes, showcasing expertise in handling Segregation of Duties (SOD) policy violations.
- Demonstrated proficiency in application remediation and termination procedures.
- Focused on the formulation of Build-map rules, Correlation rules, and creation rules.
- Crafted comprehensive test plans for Application On-Boarding processes.
- Maintained vigilant oversight of day-to-day support activities, particularly in monitoring Daily Application Aggregation reports and Application connection status reports.
- Leveraged Unix shell scripting for tasks on Web Servers, including the extraction and verification of log files for IdentityIQ (IIQ).
- Maintained proactive communication with the business team, ensuring the completion of requirements.
- Generated remedy tickets for the creation of new users and acquisition of access to different environments and databases.
- Utilized Service Now and Remedy ticketing tools to document and troubleshoot JDBC application connectivity issues.
- Conducted briefings with the business team, outlining strategies for automating the On-Boarding of existing applications to JDBC or facilitating automated FTP feed drops in designated server locations.
- Successfully troubleshooted issues related to Delimited and JDBC Application Configuration.

- Implemented custom code to convert text files to CSV feeds.
- Employed a range of tools, including WinSCP, Putty, SQL Management Studio, Beyond Compare, Java Eclipse, and XML, to streamline tasks and enhance efficiency.

Environment: SailPoint 6.3 and 7.1, SQL Management Studio, Win SCP, JDK 1.7, XML, JX explorer, Eclipse IDE 4.5.2, Java, SQL, Beyond Compare, Putty, GitHub, Notepad++

Client: Capital One

Feb 2016- Jan 2017

Location: Plano, TX

Project: Titan JDBC Application

Role: IAM Business Analyst

- Contributed to the analysis of business requirements and conducted design reviews to estimate project completion timelines.
- Configured JDBC and Active Directory Connectors in alignment with client specifications.
- Established roles and entitlements based on SQL queries to meet specific business needs.
- Designed and modified Provision forms to enable functionalities such as Create, Delete, and Update.
- Developed and customized workflows to ensure compliance with company Segregation of Duties (SOD) policies and validations.
- Crafted Forms and Rules to achieve custom functionality aligned with business requirements.
- Conducted Unit and Integration testing across various test case scenarios in the Development environment.
- Leveraged Java Eclipse and XML extensively for the generation and validation of custom code.
- Created certification process tasks to organize user tasks and entitlements data effectively.
- Formatted the existing rule library to align with evolving business change requirements.

Environment: SailPoint 7.0, JDK 1.7, SQL Server Management Studio, Active Directory, SVN, Putty, WIN SCP, XML, Beyond Compare.

Client: Syngenta Global

Feb 2015 – Jan 2016

Location: Akron, MI

Project: Sun IDM Migration to SailPoint IIQ

Role: IDM Analyst

- Engaged in the migration process from Oracle WaveSet 7.1 to SailPoint IIQ 6.4.
- Participated actively in SailPoint deployment activities, encompassing connector configuration, custom rule development, workflow configuration, and third-party system integration.
- Configured password policy, login policy, and pass-through authentication in SailPoint IIQ.
- Developed a workflow within Sun IDM to extract vendor accounts into a CSV file.
- Configured a delimited file resource in SailPoint IIQ to load vendor accounts.
- Formulated a rule to populate a list of proxies for Dynamic Scope evaluation, facilitating quick link display on the dashboard.
- Updated Identity Mapping and configured source and target applications for attributes.
- Developed custom workflows, including approvals, and modified Out-of-the-Box (OOTB) workflows to meet client requirements.
- Created and implemented static/dynamic roles, configured entitlements, and established policies.
- Developed workflows for Vendor Creation, Attestation, and Termination as part of Vendor Management.
- Crafted forms, Identity Triggers, quick links, rules, and email templates related to Vendor management through the SailPoint IIQ Dashboard.
- Analyzed client-provided specifications and assisted the Project Manager in estimating the required effort.
- Contributed to Unit Testing, Integration Testing, and actively participated in Performance tests.

Environment: Sun Identity Management 7.1, SailPoint 6.4, SQL Server, JDK 1.7, XML, Windows Server 2003, Active Directory, Remedy

Client: Xerox LLC

Mar 2009 – Aug 2013

Location: Dubai/ Abu Dhabi -UAE

Project: Sun IDM - Production Support and Maintenance

Role: IDM Support Engineer

- Rectify code-related bugs and craft new forms and workflows utilizing Xpress.
- Provide daily production support, addressing issues like password resets and account lock tickets.
- Oversee the daily PeopleSoft ActiveSync process for user creation and termination.
- Implemented deferred tasks for user disabling and deletion upon termination, managed and executed by IT Administrators.
- Coordinate testing requirements and efforts with Sun IDM and OpenSSO for IDM Infrastructure and Operations support teams and users.
- Develop and execute test scripts/use cases to assess user authentication and authorization scenarios, including single sign-on using OpenSSO.
- Participate in projects and initiatives aligned with regulatory, audit, and IDM directives.
- Execute a bulk migration process, including data cleanup for the existing 170,000 users.
- Create performance monitoring tasks and scheduled activities for System Administrators' day-to-day operations.
- Apply Change management procedures effectively.
- Implement scripts for log rollover and task automation.
- Contribute to the development of system/technical documentation and user documentation for project activities.

Environment: Sun IDM 7.1, 8.1, OpenSSO, PeopleSoft, SailPoint 5.5, Java, JSP, LDAP, Active Directory, XML, Glassfish, Oracle 9i, Tomcat, HTML, JavaScript, SQL, Perl.

Client: CFCI/ Bank Of America

June 2007 – Dec 2008

Location: Hyderabad, India

Role: QA Engineer

- Create and implement test scripts/use cases to evaluate user provisioning and de-provisioning scenarios.
- Develop and execute test scripts/use cases to assess user authentication and authorization scenarios, incorporating single sign-on using OpenSSO.
- Conduct manual testing for first-time login scenarios, including forgot password and forgot username functionality.
- Act as an escalation point for testing-related issues, delivering periodic status reports with testing metrics.
- Communicate the test strategy to the Team Lead/Project Manager and the Development Team, providing support and training to other team members as needed.

Environment: Sun IDM 7.1, OpenSSO, LDAP, Active Directory, XML, tomcat.
