

Chetan Dhowlaghar

Alpharetta, GA 30009

dchetan0903zq3u5_qaw@indeedemail.com

+1 201 228 9491

- Summary:
- With around 9 years of experience in designing & developing of Mobile applications for iOS. Goal oriented, organized team player with good interpersonal skills.
- 6+ years of development experience in iOS application development using Swift, SwiftUI, Objective C, and Cocoa Touch Framework.
- Experienced in solving issues with production environments.
- Experienced in working with data parsing forms such as XML and JSON.
- Complete knowledge in testing various design structures in iOS.
- Worked on the latest version of iOS 15.
- Excellent knowledge in developing applications in MVC, MVVM and VIPER architectures.
- Familiar with implementing Core Data into various iOS applications.
- Extensive experience Consuming REST APIs and Web Services.
- Experienced in using various design patterns including Singleton, Notification, Blocks, and Delegation.
- Experience in developing iOS applications using UITableView, Custom cells, and UICollectionView.
- Working with SwiftUI to create new applications in MVVM architecture in the declarative programming paradigm.
- Working with View, Observable protocols to create views with structs.
- Experienced in working with data parsing forms such as XML and JSON, to dynamically display

data on iPhone.

- Strong knowledge in implementing frameworks like Core Location, Core Graphics, MapKit and UIKit Frameworks.
- Familiar with Third Party frameworks including Alamofire, Realm, and RxSwift.
- Worked with Observables, Observers, Publishers, and Subscribers.
- Strong analytical and problem-solving skills, excellent communication and presentation skills, competent decision-making skills & excellent team player.
- Experienced in Agile methodologies, including Scrum and Kanban.

Authorized to work in the US for any employer

Work Experience

Sr. iOS Developer

Verizon Connect - Alpharetta, GA

September 2022 to Present

Link: <https://apps.apple.com/us/app/verizon-smart-family-parent/id923408272>

Responsibilities:

- Smart Family application designed to assist parents in monitoring their children's technology usage.
- Developed the entire codebase and architecture using Apple's latest programming language, SwiftUI, on Xcode versions 13.4 - 14.3.

- Implemented the project features following the Model-View-ViewModel (MVVM) architectural pattern, ensuring separation of concerns and maintainability.
 - Utilized the Combine framework to seamlessly integrate API functionality within the application, optimizing data retrieval, processing, and response handling.
 - Leveraged the Decodable framework to parse JSON data returned from external services.
 - Designed and implemented custom List views, dynamically populating them with data from various APIs, providing users with a wide range of options to choose from.
 - Implemented AppState and Navigation architecture to ensure smooth navigation and return to the required root views after performing actions such as profile deletion or editing.
 - Refactored views to adapt to 8 different scenarios, including families with one child or multiple children, considering factors such as the number of devices and device types.
 - Conducted code reviews to ensure adherence to best practices, optimization, and maintainability. Constantly learned and implemented new techniques to enhance higher code quality.
 - Actively participated in daily standups, bi-weekly sprint planning/grooming, and brainstorming sessions with leads, managers, backend developers, and the product team.
 - Conducted knowledge transfer sessions for offshore team members, ensuring seamless collaboration and shared understanding.
 - Features Developed like Implemented multiple variants of onboarding flows, including subscription, privacy policy, permissions, profile creation, and feature education, providing users with a comprehensive and intuitive initial experience.
 - Integrated one-time password (OTP) authentication functionality and screens, incorporating auto-submit text fields for the child app within the XMDN login flow.
 - Developed permission tamper detection and flow, displaying banners on the dashboard and profiles based on their precedence and handling various edge case scenarios.
 - Created a visually appealing custom carousel card Scroll View, offering a preview of the next card to provide intuitive user feedback and indicate scroll ability, resulting in a captivating and seamless browsing experience.
 - Designed a custom toast message structure, ensuring a consistent messaging style and enhancing user notifications across all screens.
 - Developed a custom Age selector wheel, wrapped in a professional user interface, allowing users to select year and month under precise circumstances as required.
 - Implemented a custom Scrollbar using the Geometry Reader, dynamically adapting to the content size to maintain a proportional display on screens of varying sizes.
- Environment: iOS14 compatible, Portrait, Accessibility for VoiceOver, SwiftUI,

Sr. iOS Developer

Client: MoneyGram - Dallas, TX

January 2021 to August 2022

Link: <https://apps.apple.com/us/app/moneygram-money-transfers-app/id867619606>

Responsibilities:

- Used XCode IDE to develop the app in Swift 5 with MVVM architectural design pattern, using Alamofire for back-end communications with Grand Central Dispatch (GCD) for threading on background threads.
- Developed various UI elements used throughout the app working in XCode using Interface Builder and Storyboards with Auto Layout, Constraints and Size Classes and tested to ensure all screens were user friendly on the app.
- Rolled out scenario test in Test-flight to a small group of internal users to ensure quality control and prepare for app approval submission.

- Set-up a Git repository using Bitbucket and maintained all source code.
 - Collaborated daily with engineers and designers to get product ready for release.
 - Participated in architecture and design of app, determining which architectural and design patterns to use and which frameworks to use and how best to design and implement the app.
 - Creating a custom sliding side view menu with animation to enhance UX and design appeal
 - Responsible for all issue tracking, testing & resolving all issues.
 - Designed universal app for iPhone and iPad, mostly using Swift with a bit of Objective-C.
 - Gathered requirements and interfaced with UI/UX designers and product owner to develop an attractive, user friendly, customer-facing app for this wellness company.
 - Responsible for full stack development and entire SDLC end-to-end.
 - Employed priorities with Constraints to ensure no conflicts.
 - Created Rest API for this app using NodeJS and MongoDB.
 - Implemented custom and reusable UX components for the presentation of accounts using UI Table View Cells, UI Buttons, radio buttons, dropdowns, text fields with data validation, Xibs, protocols, delegates, RxSwift and RxCocoa
 - Primary work revolved around improving performance and functionality of the app utilizing instruments and other debugging tools, improving existing features and functionality utilizing Swift and Objective-C, and adding offline storage options for app versatility.
 - Invoked RESTful web services using URL Session and parsed Json data using Encoder
 - Used Jenkins, JIRA for project management, version control and bug tracking and testing with continuous integration.
 - Implemented MAP Kit/Locations to show user locations and Clustering.
 - Implemented various flows in the app from scratch using the MVVM architecture and the RxSwift framework
 - Implemented call/Message functionality using eschat-sdk.
 - Used multiple storyboards and Tab Layout, Table View, Collection View to create different UI screens
- Environment: iOS 9.x /10.x (iPad SDK), Mac OS 10.x, Objective C, XCode 8.x, Cocoa Touch, Cocoa, RxSwift framework, JavaScript, NodeJS, jQuery, Adobe CS5 Suite (Photoshop, Dreamweaver), MapKit, Core Location, and AV Foundation, Instruments.

iOS Developer

Client: General Motors - Warren, MI

November 2018 to December 2020

Link: <https://itunes.apple.com/us/app/mygmc/id399408958>

Responsibilities:

- The application let the user search, compare & book a car worldwide.
- Part of a team responsible for the user experience.
- Developed many UI components that users benefit from when creating, updating, and maintaining their individual schedules. This also aligned with the built-in analytics available on all versions.
- Used Cocoa pods to manage all dependencies in the project.
- Employed a basis in Reactive-X using Rx Swift, RxCocoa and Wi-Fi integration for the smart functions.
- Implemented custom and reusable UX components for the presentation of accounts using UI Table View Cells, UI Buttons, radio buttons, dropdowns, text fields with data validation, Xibs, protocols, delegates, RxSwift and RxCocoa
- Worked extensively with Objective-C, XCode and Storyboard for the application at hand.

- Integrated RxSwift into the network layer to bring the app more in line with the reactive programming approach.
- Performed PR reviews on other developer's code.
- Implemented functionality for users to be able to create different tasks.
- Implemented MVVM structure for creating UI Table Views to show different data and tasks.
- Provided structured meetings to design numerous features for the IOS application.
- Created stories using Jira to fully document feature requirements as well as task size and length.
- JIRA used for bug tracking, documenting & fixing.
- Guided Junior developers on best Swift practices to be effective in development and completion of stories.
- Used Swift to control the Raspberry Pi GPIO pins to turn the LED
- Identified, documented, and remedied bugs during production.
- Fixed NIB files to remove unsatisfiable constraint warnings without breaking existing layout.
- Improved existing code to fix flickering that occurred in the first two UI Table Views.

Environment: Jira, Confluence, Git, XCode, Swift, Objective-C, Jenkins, Cocoa Pods.

IOS App Developer

Client: Ford Motor Company - San Diego, California
August 2017 to October 2018

Link: <https://apps.apple.com/us/app/ford-events/id1455647755>

Responsibilities:

- Working as part of an RTB team to fix bugs, performance, and other app issues.
 - Applying technical work to multiple stories.
 - Worked extensively with Objective -C and Cocoa frameworks.
 - Developed the App using Cocoa Touch frameworks like UI Kit, Foundation and Core Graphics Frameworks.
 - Running un-documented, tightly coupled code multiple times to gain understanding of flow and running operation and identifying bugs and performance issues.
 - Worked extensively with XCode and JSON for the application at hand to fetch and display current vehicle information
 - Developed the iOS/tvOS app in Swift using MVVM.
 - Fixing problems identified by working in XCode and modifying Swift code in a MVVM-C architectural pattern.
 - Refactoring the search bar to use RxSwift to make it easier to understand from a programmer's point of view.
 - Using Jira for tracking stories and documenting them.
 - Interacting with the API team and developing and implementing a new API for optimized user navigation.
- Environment: Swift, XCode, Jira, MVVM-C, UI/UX, RxSwift, Cocoa Touch.

iOS Developer

Webtoon Comics - Los Angeles, CA
July 2015 to March 2017

Link: <https://apps.apple.com/us/app/webtoon-comics/id894546091>

Responsibilities:

- Worked with Objective C, and Cocoa Frameworks, which includes UI Kit Foundation.
- Implemented Maps using MapKit and Core Location to display nearby branches and agents.

- Added UI Gesture Recognizers to simulate carousel effect during navigation between view Controllers.
 - Support multi branded iOS/tvOS streaming platform that includes apps (ABC, Freeform, FX, National Geographic, Disney Now, ABC News).
 - Used Objective-C and Cocoa Touch Framework to build the app, including UIKit, Map Kit, Foundation, UI Navigation View, UI TabBar Controller, UITableView and Storyboard.
 - Leveraged AV Foundation for playing audio and video.
 - Help to consolidate multiple apps into one codebase and implement new features in a way that is generic and reusable for each brand's requirements.
 - Strictly followed MVC design patterns for smooth application performance and secured user credentials for better user interaction with the app.
 - Created Network Manager to handle the service calls through AF Networking.
 - Used specific XML schema for app's (Bluetooth Low Energy) BLE 4.0 profile and use Core Bluetooth Framework APIs for the app to connect different devices of Apple.
 - Rebrand the app icons, logos according to mock-ups given by the UI/UX team.
 - Debugged the application to find crashes and bugs and submitted fixes for QA approval.
 - Worked on agile methodology.
 - UI/UX developed using programmatically Constraints in conjunction with Size Classes to accommodate various screen sizes and optimize the app for both iPhone and iPad.
 - Installed frameworks and managed dependencies using Cocoa Pods.
- Environment: XCode, Cocoa Pods, MVVM, Alamo fire, Charles web debugging Proxy, Agile.

Jr Java Developer

Panacea IT Services - Madhapur, Hyderabad, India
June 2013 to June 2014

Responsibilities:

- Implementing project using Agile SCRUM methodology, involved in daily stand-up meetings and sprint showcase and sprint retrospective.
- Full analysis of Node JS Wireframes, Visual Design Documents, and other Requirements Documents to completely understand the required behavior of the web pages and user interactions.
- Designed the front-end applications, user interactive (UI) web pages using web technologies like HTML, XHTML, and CSS.
- Responsible for creating efficient design and developing User Interaction screens using HTML, CSS, and JavaScript.
- Created and deployed new features to sustain and amend existing applications under MVC pattern using Node JS.
- Used Cascading Style Sheet (CSS) in web pages to separate presentation from structure.
- Worked on CSS to design the navigation, gradient background and used other style properties to enhance the look of the web page.
- Developed various objects using java and HTML and DHTML to maintain well-structured Graphical UI and to interact with Controllers to get data from Oracle database.
- Debug the application using Firebug to traverse the documents and manipulated the Nodes using DOM and DOM Functions.
- User input validations done using JavaScript and developed use cases using UML.
- Working in MySQL, RDS database with node.js framework to develop APIs.
- Used AJAX Controls to increase the performance of the web application.

Environment: Spring MVC, Node JS, Spring JDBC, Hibernate, J2EE, JSP, Ajax, XML, Log4j Maven, JavaScript, HTML, CSS, jQuery, PL/SQL, SVN, GitHub, WebSphere, Agile, JAX-WS, Apache-CXF, JSF.

Education

Masters in Information Systems

North-eastern University - Boston, MA

Bachelor's in BTech

JNTU - Hyderabad, TG

Skills

- Java. Swift & Concepts Cocoapods
- Worked with Observables
- Unit Tests
- Core Image
- AV Foundation
- MVVM
- MVC
- Strong analytical and problem-solving skills, excellent communication and presentation skills, competent decision-making skills & excellent team player.
- Instrument. Web Services REST
- X code Interface builder
- XC Test iOS Tools Swift
- Complete knowledge in testing various design structures in IOS.
- Data Synchronization
- Working with View, Representable protocols to create views with structs.
- Core Graphics
- Storyboard
- Instruments
- JSON and Microservices Tools BitBucket
- Confluence
- Familiar with implementing Core Data into various IOS applications.
- Experienced in using various design patterns including Singleton, Notification, Blocks, and Delegation.
- Health Kit. Frameworks SwiftUI
- 6+ years of development experience in iOS application development using Swift, Swift UI, Objective C, and Cocoa Touch Framework.
- JIRA
- Excellent knowledge in developing applications in MVC, MVVM and VIPER architectures.
- Objective-C
- Deep linking Multithreading

- UI Kit
- Core Data
- Publishers
- Experienced in working with data parsing forms such as XML and JSON.
- Microsoft Teams
- Profiling
- Objective-C
- Source Tree
- Watch OS
- including Scrum and Kanban. Operating System iOS
- Working with SwiftUI to create new applications in MVVM architecture in the declarative programming paradigm.
- Core Data
- Familiar with Third Party frameworks including Alamofire, CoreData.
- Encryption
- TV OS Programming Languages Swift
- Subscribers.
- Experienced in solving issues with production environments.
- Foundation
- Strong knowledge in implementing frameworks like Core Location, Core Graphics, MapKit and UI Kit Frameworks.
- SOAP
- Combine
- Experienced in Agile methodologies
- Size Classes
- Worked on the latest version of iOS 15.
- Core Animation
- Cocoa Touch
- Cocoa Touch Framework
- SQL
- Core Location
- MapKit
- Cocoa Touch
- MacOS
- Windows. Technology iOS
- Realm
- Experienced in working with data parsing forms such as XML and JSON, to dynamically display data on iPhone.
- Observers
- Experience in developing IOS applications using UI Table View, Custom cells, and content view.
- Linux

- Extensive experience Consuming REST APIs and Web Services.
- Slack
- Watch kit
- Push Notifications
- Carthage
- Auto layouts
- Memory Management
